Here is a warning to whomever is sending the email bombs with or with
out attachments, whether they contain virues or not.
Below is Texas's law governing computer crimes.
So think twice as there is already one individual in prison and he won't
be eligible for parole until he serves 10 years of the 20 year sentence
he received.

TEXAS PENAL CODE
TITLE 7. OFFENSES AGAINST PROPERTY
Chapter 33 . Computer Crimes
33.01. Definitions.

In this chapter:
(1) "Access" means to approach, instruct, communicate with (email),
store data in,
retrieve or
intercept data from, alter data (my inbox file) or computer software in,
or otherwise make
use
of any resource of a computer(my hard drive) , computer system, or
computer network.
(2) "Communications common carrier" means a person who owns or operates
a telephone
system
in this state that includes equipment or facilities for the conveyance,
transmission, or
reception
of communications and who receives compensation from persons who use
that system.
(3) "Computer" means an electronic, magnetic, optical, electrochemical,
or other
high-speed
data processing device that performs logical, arithmetic, or memory
functions by the
manipulations of electronic or magnetic impulses and includes all input,
output,
processing,
storage, or communication facilities that are connected or related to
the device. (my
computer)
(4) "Computer network" means the interconnection of two or more
computers or
computer
systems by satellite, microwave, line, or other communication medium

with the capability
to transmit information among the computers.
(5) "Computer program" means an ordered set of data representing coded
instructions or

statements that when executed by a computer cause the computer to
process data or
perform
specific functions.
(6) "Computer security system" means the design, procedures, or other
measures that
the
person responsible for the operation and use of a computer employs to
restrict the use of
the
computer to particular persons or uses or that the owner or licensee of
data stored or
maintained
by a computer in which the owner or licensee is entitled to store or
maintain the data
employs to
restrict access to the data.
(7) "Computer services" means the product of the use of a computer, the
information
stored
in the computer, or the personnel supporting the computer, including
computer time, data
processing, and storage functions.
(8) "Computer system" means any combination of a computer or computer
network with
the documentation, computer software, or physical facilities supporting
the computer or
computer network.
(9) "Computer software" means a set of computer programs, procedures,
and associated
documentation related to the operation of a computer, computer system,
or computer
network.
(10) "Computer virus" means an unwanted computer program or other set of
instructions
inserted into a computer's memory, operating system, or program that is
specifically
constructed
with the ability to replicate itself or to affect the other programs or
files in the computer
by
attaching a copy of the unwanted program or other set of instructions to
one or more
computer
programs or tales.

(11) "Data" means a representation of information, knowledge, facts, concepts, or instructions that is being prepared or has been prepared in a formalized manner and is intended to be stored or processed, is being stored or processed, or has been stored or processed in a computer. Data may be embodied in any form, including but not limited to computer printouts, magnetic storage media, laser storage media, and punch cards, or may be stored internally in the memory of the computer. (once again - my inbox file)
(12) "Effective consent" includes consent by a person legally authorized to act for the owner.
Consent is not effective if:
(A) induced by deception, as defined by Section 31.01, or induced by coercion;
(B) given by a person the actor knows is not legally authorized to act for the owner;
(C) given by a person who by reason of youth, mental disease or defect, or intoxication is known by the actor to be unable to make reasonable property dispositions;
(D) given solely to detect the commission of an offense; or
(E) used for a purpose other than that for which the consent was given.
(13) "Electric utility" has the meaning assigned by Subsection (c), Section 3, Public Utility

Regulatory Act (Article 1446c, Texas Civil Statutes).
(14) "Harm" includes partial (what unsolicited commercial email does) or total alteration,

damage, or erasure of stored data, interruption of computer services, introduction of a computer virus, or any other loss, disadvantage, or injury that might reasonably be suffered as a result of the actor's conduct.
(15) "Owner" means a person who:
(A) has title to the property, possession of the property, whether lawful or not, or a greater right to possession of the property than the actor; (thats me)
(B) has the right to restrict access to the property; or (me again)

(C) is the licensee of data or computer software. (me again)
(16) "Property" means:
(A) tangible or intangible personal property including a computer,
computer system,
computer network, computer software, or data; or
(B) the use of a computer, computer system, computer network,
computer software,
or data.

33.02. Breach of computer security.

(a) A person commits an offense if the person knowingly accesses a
computer, computer
network, or computer system without the effective consent of the owner.

(b) A person commits an offense if the person intentionally or knowingly
gives a
password,
identifying code, personal identification number, debit card number,
bank account
number,
or other confidential information about a computer security system to
another person
without
the effective consent of the person employing the computer security
system to restrict
access
to a computer, computer network, computer system, or data.
(c) An offense under this section is a Class A misdemeanor unless the
actor's intent is to
obtain
a benefit or defraud or harm another, in which event the offense is:
(1) a state jail felony if the value of the benefit or the amount
of the loss or harm is less
than
$20,000; or
(2) a felony of the third degree if the value of the benefit or the
amount of the loss or
harm is
$20,000 or more.
(d) A person who is subject to prosecution under this section and any
other section of this
code
may be prosecuted under either or both sections.

33.03. Defenses.

It is an affirmative defense to prosecution under Section 33.02 that the
actor was an
officer,
employee, or agent of a communications common carrier or electric
utility and committed
the

proscribed act or acts in the course of employment while engaged in an activity that is a
necessary incident to the rendition of service or to the protection of the rights or property
of the communications common carrier or electric utility.

33.04. Assistance by attorney general.

The attorney general, if requested to do so by a prosecuting attorney, may assist the
prosecuting
attorney in the investigation or prosecution of an offense under this chapter or of any
other
offense involving the use of a computer.

And just so everyone knows , the public at large has access to the computers at colleges as they have terminals in the library and can be used by anyone.
All one has to do is sign the log at the desk and they can use the computer.
They don't ask for picture ID and the only time the public cannot use them is when students need them.

Jake;

A few weeks ago the FCC published a notice of waiver that it had given to a avionics manufacturer to build aviation radios with the 8.33 kHz steps. Also in the notice it stated in no uncertain terms that 8.33 kHz step channels could not be used in US airspace. If the change takes place the FCC will publish a NPRM (Notice of Proposed Rulmaking) that it is considering these changes to thier rules. Keep an eye out for it on thier Webpage. Frequencies in the Airband here are not as congested as they are in Europe.

Regards

Ed

>Does anyone know and confirmed the location for the discrimator output of
>the ICOM R7000

Hello Douglas,

Here is how to pull discriminator audio out of your R7000 to use with
various decoders that want clean audio. Use a short piece of shielded
cable to the spare jack on the back of your R7000:

Best is junction of C131, C84 and R99 on I.F. board. Take output
through a .01-.05 to block DC present at this point.

Not quite as high an impedance, but easier to get to from the top of
the board, is junction of R97, R99, C87, C115, etc. This is the other
side of R99 as preferred method. Again need to go through a cap.

If you have the service manual or schematic, these points
geographically are between Q13 and X3, 1/2 way down and 2 inches in
from the right of the schematic.

Be careful not to load the discriminator output too heavily, as it is
a high impedance point.

Hope this helps.

The 895 is a great scanner even if you don't use the trunked feature. You will still be able to pick up traffic on the GE systems, but it kinda gets annoying with the beep-beep-beep-beep after each comm.

I have heard of a freeware program on the net which will allow you to skip the beeps with the 895, by listening thru the soundcard. Never tried it, but I hear it works well. Or, if you are handy with a soldering iron, you can tap the discriminator output and build or buy a data slicer circuit which, when hooked up to your PC, can actually read the GE data channel and tune a second scanner appropriately. I also hear rumor of one that will work with just one scanner - I am on the lookout for this, if anyone knows of one - since having 2 895s or similar scanners can be pricy for some.

For me, the built in CTCSS and computer control is worth the price of admission all by itself, nevermind the trunking, military air, triple conversion, weather alert, etc.

Does anyone know the frequencies for the friendship festival in Fort Erie, Ontario, Canada. The Festival starts today and goes until Sunday, so a quick response would be appreciated. I live within one block of the festival so I should be able to hear it even if it is low power.
Thanks.

Well, I don't think our scanners are gonna think its 1/1/1900 or stop working or some silly crap like that BUT...

...I bet the cellular band will be a real hoot to listen to as everyone opens their $25000+ electric bill and finds out they only have 1027 years left on their mortgage. Not to mention the fact that their bank just deducted $65000 or so in monthly service charges, hee hee.... This could lead some choice words at your favorite bank or lending institutions, eventually leading to urban unrest not unlike Rodney Days here in L.A., which would trigger similar riots all across the US, making for some really great scanning indeed! (sorry, got a bit carried away.. I just kinda miss those days - I never laughed so hard in all my life)

I dunno. I'd offer, but I'm full of peace and goodwill
lately.

Hey, but did ya hear?

Mackey and a PARG lover are doing the nasty. Mackey's
catching while the other thug member (pun intended) is
pitching.

A lightning bolt crashes down and kills 'em both.

Who gets to heaven's gate first? (Note: I said the "Gate",
it's not like they're actually gonna let 'em in.)

MACKEY!: he's already got his sh*t packed!

(sometimes I crack myself up)

Uhhhh duhhhh - you're holding a frequency counter and the guy sitting accross from you is using a cell phone and all of a sudden you get a hit on a 800 mhz frequency. Geeeee, I wonder what that 800 mhz frequency could be???? So let's play it out loud in front of the guy.

Reeeeeeal Smart buddy.

And since you're showing your counter and scanner to everyone, why don't you just ask the car wash what frequency they use?

I'm a newbie and even I know not to pull stunts like that in public.

My 2cents. - Howard

How warped is it loony boy? Let's take a look at the situation:

1) Somebody went and plopped themselves in front of one of Clark College's terminals in the computer center and issued close to one hundred rouge cancels and forgeries (mostly cancels).

2) Almost all of these cancels and forgeries were directed at Bill Cheek. (ok-ok, Phil got three cancels,....he was in good form. However; I didn't get any. Big fat ZERO for me. I guess that's good...in a way.) But mostly the vast bulk of cancels and forgeries targeted Cheek. This forge/cancel idiot must be clinically obsessed with Bill Cheek. These aren't everyday occurrences.

3) Who could that be? (Duh.) Mackey says it isn't him. He insisted something like "Clark College is in a whole other state." Insinuating that Clark College is real faaaaaaarrrrrrrr away from him.

4) Clark College campus is 10.2 miles north of downtown Portland OR. On Interstate 5. Maybe Mackey's PARG bum buddies endured the arduous journey to the far reaches of Clark College Campus. Maybe not. Maybe Mackey did it himself. Why not?: It's only TEN friggin' miles.

However, here is where it gets good:

>No, Bill, that is YOUR choice. You have seen a sample
>of the "painfull" consequences.

Do you realize what you have written? (HINT-HINT!: Culpability)

Figure it out.

you friggin' loon.

Ho HO! John "I change my ID more than my underwear" Mackey questions someone about a screen name change?!?!?

John! Here comes that Herculean Zit!:
Okay, let's get this straight:

Everybody's grumpy in the tree-house except Mackey, because..well...he's being Mackey!

1) The 'DOKTOR' reaches over and firmly, but gently "Whacks" Mackey about changing his message header in tiny ways to worm past filters erected to keep him out.

2) Mackey rubs the back of his head and squawks "THAT'S A BOLD FACED LIE!".

3) Whereupon Richard Kendrick immediately produces two different headers (case change of the letter "k") from a couple of fresh Mackey missives. (sssssssssssssWHHAAAACKKK!!!) Big group giggle. My ears are ringing, but I'm still giggling.

4) Then Phil Smalley (still giggling) asks "I'm going to regret asking, (giggle-giggle) but if you didn't change the header to bypass killfiles then what's the real reason Mr. "MacKey"?? (giggle) Name change or something?
(hoo-ho) This oughtta be good.
(giggle) Do tell.

5) And Mackey, not even attempting to deny the changed headers, starts playing philanthropists and actually claims to be experimenting "for the good of all people someday!" with his own prototypes of "next generation of tools for e-mail."!!!

BawHAAhaHAAAAWHAHA! Whooooohoo! Mackey the Scientist! Are you a "Secret Agent" too? Oh..hold it, ...you couldn't tell me if you were!...Right? RIGHT?

Aw jeez. You're friggin' unbelievable Mackey. Oh, Richard and Phil, fantastic follow through, first rate work. Sorry about the liberties I took on your text Phil, but that's what I heard when I read it. Maybe I projected my own glee into it.

As for you loony boy:

I can already hear ya squawkin' "IsupposeyouhavesomePROOFofyour..nyanya.."

I copied the whole thread into my most treasured archive. If you insist on proof I can post.......

Naaw, screw that. I'm gonna post it now. And you're gonna see it again Mackey; kinda like a Herculean Zit that returns again and again to plant its puss-filled mass on whatever unscarred skin you've got left on your face.

Roast in sweat.

You friggin' loon.

I have been experimenting off & on with slightly different ID's
to experiment with filters designed to prevent robots from pulling
ID's for spam e-mail.

THAT is why.

It's sorta poineering the next generation of tools for e-mail for the
good of all people someday!

You could also try a duplexer. I have two antennas for a dual-band mobile radio. You hook up the UHF antenna to the 350-540 side and the VHF antenna to the 1.3-170 side. The other side goes to the radio and the radio uses the side that use use. They have different freqs too if you don't want what's above. Good Luck with your antennas.

Best Regards,
-Steve Goeller

37. REPOST: More Rogue Cancels in rec.radio.scanner from Clark College via Multiple Open NNTP Servers

Newsgroup: rec.radio.scanner
Date: 1998-07-01 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@worldnet.att.net>
Message-ID: <REPOST-2544.92233276367.6nekt3$6cv@bgtnsc01.worldnet.att.net>
Source record: 154403
Cross-posted to: news.admin.net-abuse.usenet,rec.radio.scanner

It appears that a someone at Clark College has issued several
more Rogue Cancels (91 to be exact) in the rec.radio.scanner
News group this afternoon. All of the Cancels were issued
through Open NNTP Servers 207.34.97.3 and news.isdmc.co.kr.

All of the cancels originated from IP address 198.104.131.85
which belongs to Clark College

Clark College (NETBLK-CLARK-NET)
1800 E McLoughlin Blvd.
Vancouver, WA 98663

Netname: CLARK-NET
Netblock: 198.104.128.0 - 198.104.143.0

Coordinator:
Coleman, Jim (JC153-ARIN) jcoleman@CLARK.EDU
(206)750-3803

These are some of the headers I came across this evening:

Rogue Cancels performed on Open NNTP Server news.isdmc.co.kr

Correct. *I* don't need you to confess. YOU
need to confess, though. It would be good for
your wretched soul.

> The fact is that I am NOT doing the actions you state above,

But you ARE, Smacksie.

> & you have NOTHING to prove or even lend support your accusation!

Heh heh heh.....well, we'll see....

> So you are simply hoping you could scare me into an admission
> by "out bluffing" me.

No, I am trying to help you find peace and
solace in your own soul, you stupid harelip.
You need to employ the power of confession
to save yourself from a wretched demise.

> Perhaps you should consider, Bill Cheek, that MANY people
> on the NG of rec.radio.scanner are growing tired of your
> lies & manipulation of that NG
```

I don't lie, Smacksie. And ALL people are tired
of your lies and violations of the laws of Nature.
You are an abomination of nature.........

> and THAT is why you are experiencing so many
> problems as this time.

I don't have any problems, Smacksie. Well...I take
that back....I am having a bit of a problem with
Microsoft SQL Server 7.0 (Beta 3), but you wouldn't
know beans from apple butter about that.

Ummmm, I don't have any other problems, Hermie.
Why? Are you going to continue to try to cause
problems for me and the newsgroups?

The headset of most modern phones send a digital security code to the base whenever you turn it on. The code from the headset must match the one in the base or it won't work. This prevents someone from using your phone line to make LD calls (which was quite common in the early days of cordless phones.) I have 2 identical V-Tech phones- but if you try to swap them in their bases, not only will they not work, the processor won't even initialize.

It's not that simple!

Multiple antenna arrays must be carefully designed to see that each antenna receives the signal in same phase of the RF-cycle, and that the combining coax is exactly the same length so that this phase relationship is maintained. Also note that you must use a combining transformer (not just a "T"-connector) in order to maintain proper impedance match.

This is to let the newsgroups know that
Mackey is going back on my TWIT LIST
for a few days as I tackle another
project that is a little more important
than HIM. (heh heh heh heh)

Since he has been doing such a good job
with the forgeries, e-mail bombs, and
rogue cancels, I suspect he will step
up the tempo over the next few days. The
little peckerwood is so obsessed with me.

So how's about someone else filling in
for me for a few days?

You are so stupid to pull a stunt like that if
you did it. Thanks for giving the rest of us scanner
listeners a black eye.

I don't answer to you, Hermie. And you don't get
to speak for your husband, Prozac Boe. How I figure
things is just no concern of yours. You are not
capable of understanding how I figure things anyway.
So stew in your own juices and blow some great big
monstrous snot bubbles..... and let Boe console you.

> Also Bill, why is it that YOU are the only person
> complaining about this & no one else seems to be having these
> problems?

I'm not complaining. I think you are a laughingstock.
I laugh at you all the time. All of your antics are
very funny, even if sick, demented, and faggoty-maggoty.

Anyway, others have received your trash, too; there
just is no need for them to show their trump cards
at this stage of the game.

Me, I don't mind telling it like it is since your
e-mail bombs and forgeries are no skin off my nose.
It's a waste of your time and money, Hermie. Not
mine. Other people with modems conceivably could
get "hurt" by your antics, so we don't mention them
in public. Not yet.

But Smacksie....I am immune to your silly games.
So I can go public; pick a booger outa your schnoz
and feed it to you; and then slap you back on my
Twit List for a few days to chap your hide all the

more. Guess what?

You've been twitted again. Bzzzzzzzzaaaaaaaaap!

Ha ha ha ha ha....you lie like a rug, Hermie.

> You simply want to be able to blame someone &
> I am the only one you can think of.

No. Boe is involved with you. Maybe one other
fruitcake, too. We're getting close to him.

> Plus Bill, if you I-net connection is so hot that 30 MB is
> nothing, then why do you care anyway? Just hit the
> delete button & move on, it's that simple!

You are stupider than I thought. Your crap gets
whacked at my servers, you dumbshit. It *is* no
big deal to me. The BIG deal is when you do that
crap to people with modems and maybe limited free
space on their hard drives. You can hurt others,
SnotNose....that's the big deal.

Ahhhh yes, I see you have been emulating the common
housefly lately,..... eating shit and bothering people.

Shame on you, you friggin nincompoop. WHY on earth
would you choose to model yourself after a damned
ol' fly? Geez, you've emulated pissants, ticks,
chiggers, fleas, lice, crabbes, snakes, and lizards.

What's it gonna be next, Smacksie? A loogey?

Yes, Hermie, you did. :-)

> ou need to accept the fact
> that there are several who are growing weary of your actions.

Sure. "Several" of your alter-egos; AKA's, and perhaps
a sick, perverted soul mate or two.

The poignant issue is the entire newsgroup is weary
and sick of YOU, Smacksie-poop. The good guys, the
bad guys, and the ugly guys are all tired of YOU.
Hell, you don't even like your own damned self.

Me....I'd go back to 100% useful scanner posts just
as soon as you accept the Agreement I offered you.
You won't accept it because you CAN'T make useful
scanner posts.

> If you would simply STOP your trouble making activities,
> these other things would likely stop also. Try it!

I don't care whether your harrassment and stalking
stop or not, you stinkin harelip. It's gonna stop
anyway before too long. You get to decide whether it
stops painfully or pleasantly. Those are your choices.

Pick one.

59. Re: Uniden Bearcat 220XLT "Battery Life Extension" Modifications

Newsgroup: rec.radio.scanner
Date: 1998-07-01 00:00:00 UTC
From: ultron@my-dejanews.com
Message-ID: <6ne07p$u8a$1@nnrp1.dejanews.com>
Source record: 154430

Can anyone help me, during replacement of the Ni-Cad battery pack, on my UBC220XLT (1994/95) UK Version. I managed to cause a short (due to worn wiring), which burnt out the negative power track on the main circuit board. I found a way of remedying this buy achieving a new negative connection via the case earth plate (attached to the lower right screw). This makes the scanner operate in all modes.

Whilst this works, the scanner will now only operate for 15 seconds at a time before prematurely activating the low battery warning and triggering the low battery power cut off! I have a feeling I have 'fried' the voltage regulator on the underside of the main board, as it has 'bulged' somewhat.

Therefore as the unit is well out of guarantee period, I would like to modify it by bypassing the low battery power warning/cut-off completely so that the scanner will operate continuously until the battery pack is totally exhausted. I have obtained the following article outlining this procedure for the UBC200XLT but it does not relate well to the UBC220XLT circuity, does anyone have this MOD for the UBC220XLT, or can offer some relevant advice.

=-=
Copied from the QRZ! Windows Ham Radio CDROM July 1995, Vol.5
=-=
BC200XLT BATTERY LIFE EXTENSION: Part II

Every time we run a helpful hint on a popular product, some-one find an even more helpful hint! This one disable the low battery cutoff circuit and adds several hours of opera-tion to a single charge. Our lab unit was still going strong after seven hours straight! Uniden will provide the fix for free, but if you're in a hurry and don't mind void-ing your warranty, read on!

NOTE: This modification should not be attempted by anyone unfamiliar with small circuit board components.

The tools: You will need a small Phillips screwdriver, fine-tip soldering iron and solder wicking braid.

The procedure: Remove the battery pack, then the two screws from the bottom spring clip. Carefully pull the rear cover off, bottom first. Remove the two small screws at the base of the circuit board. Pull the front panel away from the mainframe, bottom first.

At the bottom of the remaining board--to the left of the speaker magnet--are two blue electrolytic capacitors; just above them are two striped components-- one resistor and one diode. Using the soldering iron and braid, carefully remove the two components without overheating the board or damaging the copper traces.

When you reassemble the radio, be very careful to note the insertion of the front panel into the slot at the base of the volume/squelch panel. Be especially careful to align the screw holes perfectly, allowing the two rows of fine pin contacts to mate correctly with the socket. If this is not done correctly (and it probably won't be the first time!) no damage will occur, but the scanner display will be blank.

Recharge your batteries after 6-8 hours of heavy use. If the scanner dies, recharge it as soon as possible to prevent loss of your memorized frequencies.

I have had good luck with the JFET or BIFET op amp and use a .01uF cap and a 1 MEG resistor. If you use a JFET instead of the general purpose 741 you can reduce the capacitor by a factor of 10 and increase the resistor by the same factor, thereby decreasing the load on the discriminator.

I use no feeback in my circuit - I see it did not make any difference.

From the discriminator connection (after the 10-47K resistor - see below) go to one end of the .01 uF cap. From the other end of the cap go directly into the inverted input of the JFET Opamp. Also tie the inverted input of the Opamp through the 1 MEG resistor to ground. Tie the non-inverted input of the Op Amp DIRECTLY to ground. The output of the Op Amp goes to either CTS or DSR. I use DSR.

You can substitute the capacitor from .01uF to .022 uF and the resistor from 1 Meg to 2.2 Meg and the circuit will be a little closer to DC! :-) If you don't have a scope (like me) experimentation is everything.

I also power the Amp using the 2 9V battery approach to yield the +/- 9V power. Refer to that little Op Amp book available at Radio Shack.

The JFET amp I use (readily available at RS) is the TL082. This is a BiFET amp (dual) and the pins would be different so make sure you read the back of the package carefully!

>3. Have tried Com1/Com2 which use the 8250 and Com3 which uses the
>16550. Com4 is tied up with an external modem.

COM 1 or 2 should be OK.

>
>4. Have tried CTS and DSR outputs on the interface.

OK

>
>5. Using the discriminator output of the 895 (Pin 9 of the MC3371).

>direct wire connection.

I would remove the 2.2 uF - this could be your problem. The CAP is
way too big here! I would replace the cap with a 10K to 47K resistor
to protect your sensitive discriminator. Remember you are going
through another smaller cap in the circuit I described above.

You're right about the HP unit. However, don't forget tools such as a
fast Walsh transform which can do a very fine job of displaying which
codes are active.

Unless and until the bitstream itself is encoded with a kind of public
key encryption scheme, the possibility remains for unwanted listeners.
True enough the technology isn't there today. But as with any
cryptography, it's only a matter of time...

Hi Kent...
Found your observations very interesting on the 895.
Our local Public Safety is GE/ERicson, and I was thinking about the
895. Of course I found out that it's really Motorola capable.
My question though is ... Is there any reason you know of that I
wouldn't be able to pick up the local GE/ERricson system with the 895
acting as a regular scanner? You mentioned something about the
'beeps'. In this area, all the local emergency, city police sheriff
all operate off the same system. I don't want to invest in an 895 if
I won't pick anything up.
Regards
John

> You're as big a dope as the vile piece of shit
> that you're flaming.

No argument on the last half of your statement.
The first half is certainly relative; but
relative to WHAT? Or WHOM? You? Why? Are
you the Second Coming or something?.

> Your web site proves it.

My web site proves nothing except that you
managed to get there.

> I'm still having trouble reconciling the fact that you
> can make a scanner masturbate you housepets

Or crawl up your alimentary canal and lay eggs.....?

> but you can't build a web site that's worth a shit.

That's relative, too. But don't say "can't". Just
say "didn't". And then offer to pay me, and we'll
see about the "can't". Meanwhile, I had your mother
help me with it, so take it up with him if you
don't like it.

> I struggle

Yes.....I can see that. It's been a long, dank tumultous
struggle for you, huh? (Up from the binjo ditches?)

> with people who can be somewhat intelligent
> in one area yet show their complete lack of how you might reuse the same
> concepts in other areas.

Ummmmm, say what? Let's presuppose that you are a
heterosexual for a moment. Now does your statement
imply that you are also a homosexual? A quadrasexual?

> My two year old understands hierarchical
> organization and bandwidth concepts better than you.

That's fine. I can live with that imbecilic assertion.
Let's see.....ummmmmm, no where on my list of
"cares" do I see your name or your 2-yr old's name.
So why are you operating under the assumption that
I give a Mackey what your 2-yr old understands?

> You only serve to make yourself look very stupid
> when it's clear you are not that bright yourself.

Say what? I'm not sure I understand what you think
you tried to say, much less what actually came out,
though I can make a good guess at which end it frothed.

However, let me take a stab at it by submitting that
I don't give a flying Mackey what I look like, nor
about what is clear to you. I can't help what I look
like .... when God passed out looks, He didn't ask me
which set I wanted. Nor do I give a zit on Mackey's
arse about your criscrossed optic and rectal nerves
that skew your vision. What is or isn't clear to
you is of no concern to me whatsoever.

Now if you PAID me to care, I guess I could muster
up a little interest.....but don't tell me the
check's in the mail. It'll take hard, cold cash
geetas from you to arouse my interest in caring.

> Cap'n Redeye

Is that, by any chance, from the liquor you chugged?
Can't get on the newsgroup without a little liquid
courage, eh?

Have you considered meditation and maybe a little
yoga? Try chanting a few mantras and maybe an
invocation to Zeus or Wodin.

Oh.....almost forgot.....would you like some Windex
to clean that window pane down by your belly button
so you can see out better?

Soooooooo, repost all the putdowns I've made about
AOL and let's see how "MUCH" and who's the lying S.O.B.

> You haven't even tried to refute that fact with "facts" of your own. Guess
> there aren't any.

You made the charge, asswipe. So back it up.
See if you can repost the two or three slams I made
about AOL and then the time frame in which they
took place..... and that's "much"?

> >AOL isn't an ISP. They don't even claim to be.
>
> Uh, yea they are, moron.

Well, you'd like to THINK they are, huh?
And then only because AOL's GUI is all you
know how to use. And I say AGAIN, that
even AOL doesn't claim to be an ISP.

>I'm not even going to debate that assinine comment

You'd better not. You'd lose

> You've demonstrated your putur knowledge 100% with that
> stupid statement.

I'll submit that you demo'd your LACK of knowledge
with your ASININE statement and misspellings......
not to mention the silly defense of the green weeny
AOL Information Service.

AOL an ISP? Ha ha ha ha ha ha ha ha....you dumbass.
AOL is a kitty litter box for weeny washers like you
to play. Geezus H. Kriste, even your bosom goodbuddy
Mackey doesn't play THERE.

102. Re: Cell Phones as scanners?

I'm pretty sure that all cellular phones- maybe even the new digital breed- have various service, test and setup modes in their memories, which can be accessed by anyone with the magic keypad sequences. It seems reasonable that scan, channel lock-on, and specific channel select would be among the functions.

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

PERCON PERCON POLICE SCAN
DESCRIPTION SIZE CET GROVE SPECTRUM REGION CALL WARE CSP
Frequency (or Lower Limit) 16 11 12 16 16 # 11 #
Upper Frequency Limit 16 16 11

I put a listing of Houston area shopping mall's security frequencies on my site, but I need confirmation as to whether or not these frequencies are indeed being used for the purposes I described. Please let me know if you have more information. The frequencies are at: http://members.aol.com/jdhtex/houstonscan/houmalls.htm .

I'd also like to thank everyone that helped me out with the Houston PD & FD pages.

John has made a *few* on topic posts which I gave him credit for. He
made one a while back about repeater frequencies which was on topic
and I noted so at the time. I've tried to modify his behavior by
giving him positive reinforcement when he does good but it just hasn't
worked too well :(

I was in a waiting room at the car wash. I was using my frequency counter to get the freq of the employees. They did not seem to use their radios very much, and I had them wash my car 4 times but they never used their radios. I got a blip in the 800 mhz range, and so i flipped to that and listened and it was a cell phone call. I played it out loud for a few seconds, and it turned out to be the guy sitting across from me. He asked me how I did that, and I told him all about scanners, and how there are thousands of owners who love to pick up cell phone calls with scanners. Anyway he got real mad and hit me in the face. He stormed out. He told me he was calling the cops. I was kind of stuck because my car was still being washed again, but when it was through, I told them it looked good this time. I scanned some more and heard this same bastard talking to his lawyer. I played some of it for the employees, and then drove away in my Colt even though it was still wet.

I think I may be on the news soon, and maybe I'll get to be part of an expose about how easy it is to pick up cell phone calls.

Mackey...just because we don't let YOU know this is happening, doesn't
mean it hasn't happened.
Any mail to me passes through no less than two servers, both of which
have been instructed to not recieve any attachments at all.
I don't need them from the ng, and if I do, I provide a FTP address
where friends can leave them.
You are not considered one of them.
I'd have you're little Mackey lackeys be careful, I think the owners of
those domains with open servers that you've been abusing are about to
slap you hard.

Hi,

I visited the AOR web page and they had a PDF file with info/specs on the upcoming AOR8200. The site is http://www.aorja.com/ar8200e.html

But in reading the specs, with all those great features, they only manage ONE priority channel?

Someone, please tell me this is a typo!!!

Take it easy,

How can I lose when I've already won that argument ? Nice try.

>> You've demonstrated your putur knowledge 100% with that
>> stupid statement.
>
>I'll submit that you demo'd your LACK of knowledge
>with your ASININE statement and misspellings......

Ahhhh. When you can't deal with subject and you're getting your ass stomped, start pointing out spelling mistakes!! Desperate move from a desperate person.

Care to point out a SINGLE spelling mistake in that above statement? If you consider "putur" to be an error, you're even more desperate than I thought !

>AOL an ISP? Ha ha ha ha ha ha ha ha....you dumbass.

It's too bad you can't deal with reality.

I'm glad you're sticking with this. It makes my original point even more valid. You keep trying to avoid it. Why? Because you are a LIAR.

Facts are facts and when you're presented with them you run and cower.

Oh well...........

Hey, Cheek. Come here. Closer. Closer. *SMACK*. Now, cut the shit and listen hard. Real hard.

Are you listening? Turn the hearing aid up. Ok, can you hear me now? *plonk* in to the old killfile. That's the end of you. I can't waste my time dealing with a habitual, denying liar who hasn't a clue.

I was beginning to think it, now I know: This is a CANNED response to any
scanner price!! Obviously you're not interested in buying a scanner, so
why bother responding??

Some assembly required.
Batteries not included.
Void where prohibited.

Skyhawk,
Again, you show what I thought was your ignorance. Come to find that it was your stupidity, as you have been told in the past that the PRO 2004 is worth MORE than this asking price. The least you could do is get the facts before you run-down this aged but very nice scanner.

Remember, Ignorance is only a temporary state. Stupidity is permanent.
Sorry.

Hi Folks,

I was very dissatisfied with the OEM antenna supplied with my AR8000, so I had been looking around for some time for a suitable replacement. Since I use my scanner at work, (I am an EMS field supervisor for a busy, moderate sized city in Va.) were I listen to the state police and bridge tunnel people, I figured that I needed something that would bring in signals more reliable. Thanks to Richard J. Wells "Handheld Antenna Review"- http://www.qsl.net/n2mca/REV_HANT.HTM I was able to ascertain the best antenna for my needs. On last week I called Communications Headquarters Inc. http://www.chq-inc.com/index.html, and ordered a Diamond RH-77CA for only $24. On Rich's list, the RH-77CA is the highest rated non telescoping antenna. I received my antenna today and jesh, I can't believe the difference!!! I can monitor my department's simucasted transmissions on 46.06 mHz without a problem and everything else comes in booming!!!

Thanks Rich!!!

Cheers

Brian

p.s. I have no connection with Communications Headquarters Inc.

This isn't a bad price for decent cell capable scanner w/ AC adaptor. If it is in "mint" condition with a fairly tight keypad and scratches on the case; it's not a bad deal at all.

149. PRO-43 Battery Drain

Newsgroup: rec.radio.scanner
Date: 1998-07-01 00:00:00 UTC
From: DNCW25A@prodigy.com
Message-ID: <6nbuht$20l8$1@newssvr04-int.news.prodigy.com>
Source record: 154586

After 6 years of great service, my PRo-43 has developed a problem in that it will drain the batteries after 24 hours of sitting on the shelf with the power off.
Anyone have any ideas what could be causing this? Thinking about sending it to Radio Shack for rrepair but wonder if they will fix the problem and ignore the cellular mod? Heard someone say RadioShack would restore the cellular block if they worked on it.
Thanks,
Dave K4PBN

Putting juice back into dry cells is a very old concept; the earliest chargers used "dirty" DC which was basically AC put through a simple rectifier unfiltered. The problem with recharging cells not made for such treatment is that you can only compensate for very light discharge, basically "topping them off". They tend to discharge quickly because of the development of internal shorts (dendrites) as their internal separators are not made to withstand recharging. They are also pretty easy to induce leakage because the seals are not so designed either.

So-called rechargeable alkalines like those licensed from BTI (Rayovac Renewal, Pure Energy, Alcava, etc) have slightly different chemistry, stronger internal seals and separator to withstand the rigors of charging, and reduced capacity (even at the get-go) compared to single-use alkalines. They are well suited to conditions of light discharge and light to modest current demand, especially intermittent or continuous low-level drain.

The charging circuits are a variation of the old "dirty DC" technique. They use pulsed DC controlled by a custom microprocessor to monitor the voltage of _each cell_ in between the pulses. When the voltage approaches ~1.65 volts the pulses taper towards nil. These circuits are more aggressive about charging current and voltage endpoints because they are designed to

be used with cells that can withstand the stress of recharging.

The charger you saw was marketed by Buddy-L, and was only modestly effective at best. There has been a large variety of more sophisticated prooducts on the market which do somewhat better but suffer from the same basic limitation - you are trying to cram energy back into something that is not designed for it. If you rejuvenate cells after very light drain, you will probably get several cycles out of them. You probably aren't looking to use your scanner in this way, so if you want to experiment with recharging try the Renewals or Pure Energy cells.

First of all ,there are NO SET FREQUENCYS for bugging by any one or group.think about it for a little while and you will understand why.secoundly the search is part of what scanning is about. good luck

Source record: 154592

The Chicago Area Radio Monitoring Association's newsletter has been converted to an e-mail list!

All list functions, help files, etc can be accessed through our host's web site:

http://www.qth.net

To subscribe manually send an e-mail message to:

majordomo@qth.net

In the body of the message type one of the below:

subscribe carma

-or-

subscribe carma-digest

(Whichever you prefer; the "subscribe carma-digest" command results in you receiving a compilation of messages, when ever the buffer is full - about 40k. The regular subscribe command results in you getting the individual messages as they are sent)

You will receive an authorization code and further instructions. Essentially, you just send the coded command back to majordomo@qth.net

Postings to the list go to:

carma@qth.net

You must send the subscribe commands from the same address you will use to receive the messages.

If you are a scanner buff in the chicago area you'll probably want to be a subscriber.

And don't forget our web page:

http://www.theramp.net/shabec/carma.htm

Snail mail still goes to the PO Box, but we are no longer accepting new subscriptions to the printed version of the newsletter (or renewals). If ya got paper, send it to:

CARMA
PO BOX 2681
GLENVIEW IL 60025

Happy Scanning!

Hello there...

I have for sale a Radio Shack PRO-39 portable scanner. Has 200 memory channels (well, it's actually 210 if you count the 10 monitor channels also,) Hyperscan mode (blazing 25 channels per second scanning and 50 steps per second searching rate.) The scanner covers the following frequency bands: 30-50, 50-54, 108-136.975, 137-144, 144-148, 148-174, 380-450, 470-512, and GAPLESS 806-960 MHz (with proper 30 kHz spacing in proper portions of the 800 MHz band, and normal 12.5 kHz spacing elsewhere.) (Mod was professionally done.) The scanner is in MINT condition (I hate to use the word "mint," but in this case, it truely DOES apply!!!) There are NO SCRATCHES anywhere on the scanner. Scanner comes with the following accessories: "Rubber Duck" type antenna, six Radio Shack Rechargeable AA NiCADs (1.25V, 650 mAh,) Radio Shack Home AC adapter/charger (9V DC 300mA output,) Radio Shack Mobile DC adapter/charger. Plus I have the original box, packaging, and copy of manual. Date code 8A3. Made in Japan. $180 for everything. Willing to ship COD (cash only, no checks!) or postal money order. Thanks for reading.

I too thought the RS232 port was ideal to control a radio, but the
problem with it, and the manufacturers seemingly lack of support is
totally ridiculous. Look at the issue: Any data which transfers
between PC and outside device, over the serial connection, <should be>
totally benign--after all, I think that's what the RS232 specification
calls for.

You said it. Perhaps the manufacturer jumped the "profit-gunn" too
soon--without beta tests which any successful company, these days
compelled to perform.

>likely) to me that even a temporary mismatch in baud rate between the
>radio and computer (such as during a reboot or power/down/up of the
>radio itself) could send enough "randomly interpreted" commands to

Just thought I'd add...

166. Re: CDMA digital cellular phone scanning

Newsgroup: rec.radio.scanner
Date: 1998-07-01 00:00:00 UTC
From: tech@home.ca
Message-ID: <3599dfac.2046615@news.vaxxine.com>
Source record: 154603

The HP unit (or any other unit available today) tests the subscriber units in an isolated enviroment away from the network. A true cell site test unit does not decode phone calls, it measures signal quality and may include an actual phone in the unit to place calls but not decode other users.

For the carrier it's much easier to tap the call after the audio has been changed to PCM for the PSTN. Carriers are not going to pay (or require) units to listen in on the average user. Any police department has the full cooperation of the carrier to track conversations with the proper warrants.

CDMA is a published standard, but if you read into the security features involved it's extremely difficult to capture enough signal (hand-offs happen frequently) to put together the bit-stream then try to de-crypt the call, by the time you might get lucky and trip on the right seqence the call would be weeks/years old. Very little value in it.

Most carriers are not operating all the available security features, when required this will add an interesting twist to the situation.

Source record: 154605

@cts.com
Organization: COMMtronics Engineering & World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner

ATTENTION: Victims of E-Mail Bombs

If you've received any e-mail "bombs" over
the last few days, please contact me with a
description of WHAT you received and ostensibly
from WHO?

It appears John Mackey and Peter J. Boe are
active again plastering the bit stream with
e-mail bombs from the CLARK.EDU and ND.EDU open
servers. The modus-operandi is to make it appear
the e-mail is from me or select others with large
files attached.

E-Mail "bombs" are plain e-mails with file
attachments, especially very large ones, on
the order of 250-kB and larger. You can tell
it's a "bomb" when the file attachment is not
anticipated in advance or when it's something
that makes you scratch your head and wonder
why someone sent it to you.

The effect of an "e-mail bomb" is to tie up
your modem for lengthy periods....as well as
to take up space on your hard drive. Some
e-mail bombs might also contain viruses, so
DO NOT UNDER ANY CIRCUMSTANCES attempt to
run an executable file that came in via e-mail
without your advance knowledge of the source.

It is also wise to steer clear of any MS WORD
and EXCEL files by virtue of the proliferation of
"macro viruses" that can cause harm in these
applications.

FYI.....I've received about 30-MB in mail bombs
today alone. No big deal to me because I have
a full time extremely high speed connection to
the Internet, and that 30-MB took all of a few
seconds to come into my server and a few more
seconds to auto-delete it. No skin off my nose,
but those of you on regular modems will have your

on-line time dominated by the downloading of these
nonsense "bomb" files.

There are several ways to deal with e-mail bombs,
the easiest and simplest of which is to use the
"REMOTE MAIL" feature of your e-mailer. In a word,
you log onto the e-mail server and LOOK at a list
of e-mail waiting to be downloaded. At that time,
you have the option of deleting any suspect mail
from the server without downloading it. So look
down the list of waiting e-mail and anything larger
than 100-kB is suspect, unless you KNOW the source
and are expecting a larger than normal e-mail.

The bottom line is simple: I will NOT send anyone
an attached file larger than 25-50 kB without
their requesting it in advance. So if you see
1-MB files in your e-mail queue from me, just
delete it remotely and all will be well. I didn't
send it, despite whatever the FROM: line in the
header says. Here is an example header of a forged
e-mail bomb:

```
=======FORGED E-MAIL BOMB=======================================
Received: by mail2.san.rr.com for bcheek
(with Cubic Circle's cucipop (v1.21 1997/08/10) Tue Jun 30 19:55:11 1998)
X-From_: psmalley@mail.hac.com Tue Jun 30 14:56 PDT 1998 <-------!!!!
Received: from nd.edu (nd.edu [129.74.250.101]) <-------!!!!
by mail-atm.san.rr.com (8.8.7/8.8.8) with SMTP id OAA06923
for <bcheek@san.rr.com>; Tue, 30 Jun 1998 14:56:26 -0700 (PDT)
Received: from liblab-users.clark.edu (actually 198.104.131.85) by nd.edu
with SMTP (PP); Tue, 30 Jun 1998 16:54:00 -0500
Message-ID: <35994254.40C6@mail.hac.com>
Date: Tue, 30 Jun 1998 14:53:56 -0500
From: Phil Smalley <psmalley@mail.hac.com> <------!!!!
Reply-To: psmalley@mail.hac.com
Organization: Hughes Space adn Communications
X-Mailer: Mozilla 3.04Gold (Win95; I)
MIME-Version: 1.0
To: lkjl@lkj.com
Subject: antenna
Content-Transfer-Encoding: base64
Content-Disposition: attachment; filename="Acvisex.exe"
Content-Type: application/octet-stream; name="Acvisex.exe"

Newsgroups: rec.radio.scanner,alt.radio.scanner

ATTN: Mackey, Boe, and other e-mail bombers

You guys are peeing into the wind trying to
e-mail bomb me. I'll tell you again that
you're wasting your time. Your 30-MB of
junk today arrived in the twinkling of an
eye and got deleted just as quickly.....
automatically.

I'm on a high speed, full time connection to
the Internet, and even if you could send
streaming video, it ain't likely you'd cause
a ripple on my pond.

Though I will warn you one time....you are
on the verge of getting caught. So for that
reason as well as you can't penetrate my
force field and condom.....you may as well
give it up and give it a rest. You're
wasting your own time and it's costing you
money and resources to play a man's game
from the confines of your kitty litter
sandbox.

As for e-mail bombing others and making it
look like I sent it....again, you're peeing
into the wind. It is easy to tell who DIDN'T
send an e-mail and even easier to just delete
it off the server before ever downloading it.

Mackey, Boe, and other e-mail bombers, you
turkeys are wasting your time and your money.

> Anyone have any ideas what could be causing this?

Sounds like a bad set of batteries, assuming
they're NiCd's or other rechargeables. If
fresh alkalines, then there is a real problem
elsewhere.

> Thinking about sending
> it to Radio Shack for rrepair but wonder if they will fix the problem and
> ignore the cellular mod? Heard someone say RadioShack would restore the
> cellular block if they worked on it.

Only if they replace the Logic/CPU board. Otherwise,
they won't know it's there.

But first, check out your batteries; you may just
need a new set of rechargeables, if that's what
you've been using for so long.

"Lughi" <lughi@gte.net> wrote:

Lughi? Liken unto "loogey"?

> Could we start a newsgroup Alt. unfan Bill Cheek Moderated

Sure, go ahead. You can be the moderator, too.
You can have my vote.

> so all the abuse is off this group.

Sure. That would be nice. I think, however, every
dictator, emperor, and President-for-Life has said
the same thing. And another thing they all have in
common is that none are for "free speech".

But, sure. Go ahead and start your own newsgroup.

> I don't know the guy or care about what he does.

Oh. Well, you SHOULD care. If you knew, you might
have a different point of view.

> This group has to do about scanners, perhaps we
> should try to stick to the subject. End of Sermon.

Perhaps. But the very best you can hope for and
as good as it will ever get is for YOU to stick
to the subject and learn how to control your computer
and MAKE it stick to the subject. It will NEVER
get any better than that......unless, of course, you
are successful in starting a moderated newsgroup and
can manage to attract an audience.

Ummmmm.....but WHAT IF you start a newsgroup and
nobody reads or posts to it? Wouldn't that just
be the screaming shits? Reminds me of what the
hippies of the Vietnam era used to say: "What if
they gave a war and no one came?"

But anyway.....if you want a newsgroup in your own
image of all that's righteous and proper, then find
a way to get rid of Mackey, Upton, Donlan, Quarnstrom,
and a few other nitwits, halfwits, and nincompoops, and

the quality will improve automatically. Find a way
to get rid of me, too, if you don't like me..

Otherwise, teach and force your computer to purge ilk
of that sort, and you will have accomplished the same.

In the alternative....read what you want to read and
don't read what you don't want to read. Eh?

The HP unit decodes "Quality of Signal" measurements and not phone calls. Subscriber test units typically test the phone by creating an isolated enviroment for the phone to work in. This allows the tech to test the phone without impairing any live networks.

Great radio but some people have ran into some problems with EEPROM's losing their settings (calibration etc). The exact cause is unknown but Icom is not supporting its customers. They have gone so far as to say that using third party software voids your warranty! Imagine a computer controlled receiver that can only be used with the OEM software. Which by the way takes an unlimited memory scanning wide band receiver (the PCR1000) down to less functionality than a basic handheld radio shack unit!

Having said that I have not had any problems with the unit. The protocol is partially documented on the net and I have had fun programming it. On occasion I have seen my Pro-2045 pick up signals that it doesnt even see. You might want to look at WinRadio as well to get a balanced viewpoint. The one thing the PCR has over WinRadio is its portability. It easily can fit in a laptop case and it is independent of the PC hardware architecture. ISA is becoming a thing of the past and WinRadio is an ISA card.

Yes, A,B and C are all illegal according to the FCC, *HOWEVER* many have reported that they received their orders direct from European merchants without getting nabbed. Customs usually won't look twice at a package that doesn't alert a bomb-sniffing or drug-sniffing dog. I have also heard rumors of Customs agents confiscating foreign electronics and keeping 'em for themselves, but it's just a rumor. For best results and least chance of losing your money, I'd go with option B, sent via a plain, unlabeled package. And if you or your buddy get a phone call about it, play dumb.

Of course it shouldn't Brad. There shouldn't be rapists and drug dealers roaming the street. But there they are.So filters are a way of life. Because if you don't use filters, your only other option is to attempt to control what others write.

Kinda hard to do in an unmoderated format.

Sunday afternoon stroll: Sonntagnachmittagsspaziergang.

Don't know about the other one. A similar word is Schadenfreude, which refers to "malicious joy," or taking pleasure in others' misfortunes. Not exactly what you're looking for, I'm sure, but I gotta admit that it's one of the reasons I come to this group.

I wouldn't be too concerned about prices. Technology things tend to go down in price. CE will try to make it appear the 895 is on sale for a limited time ... like it was when I bought mine months ago. It's still on sale. They keep extending it.

So probably no reason to worry.

What a statement. Only a certified Scarlet Mackeral loving loon could ever come up with such a mountainous festering pile of decaying donkey dung. Observe the headers, bozo. What you're saying is, Bill Cheek is making posts as me. From Hughes Space and Communications' own private news server. And answering my email address as well. As me. Really. Sure.

Hasn't it ever occured to you that your Scarlet hero is really just an ugly, hermaphroditic parasitic butt worm with no life, no brain, no purpose and no imagination? Hasn't it occurred to you that maybe Bill Cheek isn't the only one to notice this? Or are you too busy living it up at the Blue Oyster with John and the rest of his PARG rumprangers to look beyond your own ignorance?

Ahh, enough beating around the bush. Obviously YOU are one of John Mackey's many multiple personalities, probably formed as a result of too much anal sex and not enough medication.

Looks like you picked the wrong week to quit sniffing glue.

Well, I was told one of their stores in Athens, Georgia, had two in stock. I doubt there are more than 2 or 3 Radio Shacks in Athens, so you could call all of them.

By the way, this info is now one week old, so they could be gone by now. Make sure you have the stock # on hand (20-0408), because most of the Radio Shack
salesman will have little or no idea what you're talking about.

Good luck!

196. SPECTRUM DISPLAY MONITOR AVCOM SDM-42A

Newsgroup: rec.radio.scanner
Date: 1998-07-02 00:00:00 UTC
From: Ron M <monfeli@telis.org>
Message-ID: <359C27D4.391FBBAC@telis.org>
Source record: 154184
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

This professional Spectrum Display Monitor is designed for use as a panoramic signal display for VHF scanners and Communication Receivers such as Icom, AOR Realistic etc. The SDM-42A displays all signals present in the receiver's IF on a 5" CRT so that the operator can monitor signal activity up to a full 10mhz wide. The operator can then quickly tune to signals as they appear in the spectrum display. This greatly facilitates locating and tuning of intermittent signals as well as surveilling a particular frequency band. This unit has been used in a

hobbiest environment not a professional one and is in excellent condition. Asking $750.00 plus shipping.

I read Brad's posts. Fairly well organized. He seemed to understand the banter but wasn't particularly amused. He's of the opinion that he shouldn't have to fiddle with filters. (methinks he wouldn't have to "fiddle" with filters if posters would stick to one ID, eh? MaC.key?) So he's blowing off steam. And he's taking his time about it. (Those posts are edited and proofed).

But that distance thing: ok-ok-ok, I read 17 miles from downtown Beaverton to Clark College. You've still got this 30 to 35 mile figure. I thought you were in Portland, 10.2 miles from Clark College, then you pointed out that you live in Beaverton, about 7 miles east of Portland. Now you're 6 to 7 miles away from downtown Beaverton. East or West on 10?

Let me see if I have this right? You want to have a radio that gets lots of image interference so you can listen to cellular phone conversations as well as pager signals in the two meter ham band, taxi dispatch on the 460 MHz police band and utility company dribble instead of fire calls. Have I got that right?

I am not doing anything to have fun. However, don't YOU live in Portland, right in between the two locations where the colleges have been causing problems? How coincidental.

Anyway, you will notice that I have asked Bill for several truces & he has refused them all. I then proposed a 7 day "stay" on all flaming & he continued to cause trouble every single day while I posted NO off-topic messages.

Perhaps that is the way it works in Texas where you are at. Out
here, you must be either a student or staff member to use the
college computers. If you don't believe me, call the system
admins that were listed & aske them.

> 1) Somebody went and plopped themselves in front of one of Clark
> College's terminals in the computer center and issued close to
> one hundred rouge cancels and forgeries (mostly cancels).

Facts you neglected to mention:
1. Clark College is in a different city & state from me.
2. I am neither staff or student at this college which
requires such a relationship to use their computers.

> 2) Almost all of these cancels and forgeries were directed at
> Bill Cheek. (ok-ok, Phil got three cancels,....he was in good
> form. However; I didn't get any. Big fat ZERO for me. I guess
> that's good...in a way.)

More facts you neglected to mention:
3. I have also had several of MY posts canceled.
4. Several other people are unhappy with Cheek's actions on the NG.

> 3) Who could that be? (Duh.) Mackey says it isn't him. He
> insisted something like "Clark College is in a whole other
> state." Insinuating that Clark College is real faaaaaaarrrrrrrr

> OR. On Interstate 5. Maybe Mackey's PARG bum buddies endured
> the arduous journey to the far reaches of Clark College Campus.
> Maybe not. Maybe Mackey did it himself. Why not?: It's only
> TEN friggin' miles.

Even more facts you neglected to mention:
5. Clark College is nearly a 30 mile drive from my location of
Beaverton, Oregon. (certianly more than the "TEN friggin' miles" you
state)
6. Clark is NOT on I-5, it is some where east of I-5, opposite of
downtown Vancouver.
7. If other people chose to make posts on the net, that is
THEIR responsibility & NO ONE ELSE'S. (& certainly not MY problem)

There was a time you said that you spoke to
someone in Oregon who said I didn't work in the communications
field. When asked, you could not tell WHO, WHEN, or WHAT
agency the person was associated with! At that time, I was
the Senior Technicial Supervising all the technical operations
& staff. So it was obviously you were lying!

> Real interesting, when a system administrator at
> the origin of many of these forged posts knows

Aw Heck, John has sent email bombs to me before. No big deal.

I think it is a jealousy thing with John. He sees people who
are much more successful than he will ever be, and lashes
out at them. Oftentimes people are like that, but not to
the extent that it afflicts John. Maybe with some help,
he will get better.

karilyshag@goulash.com (Magyar Karilyshag) wrote:

> This Mackey, he is the master of sock puppets as well as the master
> baiter. Yes?

Primarily a Master Baiter, yes. But he
hooks his own self in the process because
he's not overly bright. He has a hard time
telling the difference betwixt an anchovy
and his thumb.

The poor fellow is very unfortunate, having
been born without eyelids and eyelashes.
The doctors grafted on pieces of his foreskin
to make the lids, and when he hit puberty,
they transplanted some pubies for lashes.
That's apparently why he takes VIAGRA to
stay awake nights so he can forge usenet
posts and send e-mail bombs to people.

They still haven't fixed his buckteeth,
cleft palate; harelip, and 2" overbite, but
he hopes to earn enough money in the men's
room down at the bus station to pay for
the surgery.

He's got another malady, too, where his
optic nerves are crossed over with his
rectal nerves.....for...well, a very brown
outlook.

As you might surmise, Smacksie has had
a very unfortunate existence.......

RadioShack is now selling the Pro-64 scanner radio for $99.97. If the store in your area is out of stock I can send you one for $99.97 + $8.25 for tax + $5 shipping anywhere in the USA. You can email me or call me at (713) 462-0201. Most of the units available are displays or possibly returns. All are guaranteed to work and are backed by at least a one year warranty that is honored by RadioShack. I am sorry, but I can not ship outside of the country and I can not deduct the sales taxes that apply in Houston, TX. A grand total of $113.22 is a great price for radio.

The probable reason for that is the large number of miscreants,
such as yourself, that live in the Portland area and are habitual
abusers of the systems.

Maybe they've been told not to say anything about it due to an
ongoing investigation. I'm sure Bill's not the only one who has
been mail and list bombed.

You know how I SOLVED the problem...? I just created a filter for that name and some guy named Mackey? Well I found that when Bill ever replied to me it was biased and appeared he never got any formal electronic education. I may miss some good informative post this way ... but at least the CRAP is not getting viewed or downloaded.

My beloved AOR 1000 XLT (handheld all-mode wideband receiver) has gone crazy.
I can no longer enter frequencies in the VFO mode. The display says:
"Frequency Error".

I think a reset might be the solution. There is however one problem: I haven't
got the faintest idea how to do that.

Are there any AOR users who have a manual and know how to reset and have an
idea of the cause of my problem?

I would highly appreciate any help, preferrably by e-mail!

Does anyone know German?

There is a German word for someone who, upon experiencing an uncomfortable pain, seeks to constantly re-experience that pain. Sort of like sniffing a carton of sour milk. You KNOW it's gonna stink to high heaven, but you just can't help yourself.

The reason I need to know that word is so that when someone keeps the Macaroon thread going, I can say, "You know. you're experiencing __________."

Except I wouldn't put in "__________", I would put in the German word. Except that I don't know the German word.

So anything you can do to. . .to. . .to. . .be of assistance in locating this word would be very appreciated. (Gratutitous Monty Python/Holy Grail reference eliminated here]

Also, if anyone knows that wonderful lengthy German word for "Sunday afternoon stroll" please post it.

>some other place to roost.

The point is that, if the stories are true (which is really irrelevant at this point), then your aggressive reaction to Mackey is that of someone whom the average person probably _wouldn't_ like otherwise. Very reactionary, overbearing and annoyingly loud. It's realized that you enjoy the banter, it just gets old and repetitious, and it's a real pain in the ass for people to filter. Contrary to popular opinion around here, the twat filter was not meant for everyday use, it is meant for things like spam, extremely malicious loony-bin types (yes, yes, insert repetitious mackey joke here), and other exceptions to the rule. It's a very awkward way to try and split one channel of information into two parts. Just saying, "well you should learn how to filter" isn't good enough, it shouldn't have to be done on that magnitude. When people have to start using it to filter out half of the content and people of this group, it becomes much less accurate and takes a lot of fine tuning (and time), and for no good reason. I don't give a shit that it exists and would never seek to ban it or anyone from Usenet, I used to enjoy doing it, but I'm not sure why you guys can't at least channelize it in one or the other of the *.radio.groups.

>problem will have on Scanners.

Yes, I know all about this. If you have your scanner turned on when the clock turns over at midnight on December 31, 1999 the RF will tear a hole in the time/space continuum and you will be sucked into a wormhole and transformed into a stream of digital data. When you emerge from the wormhole, you will find yourself in this newsgroup as one of the many flames posted by John Mackey. Once that happens, you will be assaulted by an overwhelming blast of bits by several newsgroup participants who will turn your remains into digital dust. It's already happened to Emilio Goldstien.

From: David Lessard <dlessard@telplus.net>
Message-ID: <359C03CE.508D@telplus.net>
Source record: 154282

I have a Bearcat 855XLT scanner for sale. It receives the 800 band with no gaps. It also receives the aircraft band (108 to 136). $125, includes shipping by C.O.D. The scanner is in excellant condition, it includes antenna, original box. No manual. I recently purchased a used handheld, so don't need the desktop (855XLT). I can mail out immediately.

277. Will BC895XLT prices stay under $300?

Hi all!

I am very interested in purchasing a BC895XLT scanner, but the timing isn't the best for me right now. I'd prefer to wait a couple of months.

I've seen this unit available (new, from dealers) ranging from $279-$569.

Do you think I'll still be able to pick one up new for $279 in a few more months?

Thanks for your input.

-= Russ =-

P.S. Posting to both [rec/alt].radio.scanner...

Yeah, that's how it always is with you. Fan the flames, then run and hide behind some supposed truce. You're so full of crap John, I can smell ya from here. You don't want the flames to stop, you never have and you never will. It's the only thing that brings joy into your otherwise depressing and pathetic life.

Friggin' Loon!

Your a liar John, you also added that Bill could not post a reply that required him to mention one of his products in response to another posters question.
Also the non-flame and nasty message conditions you wanted were in fact your way of trying to play net cop and Bill did offer a direct truce to you where he would go his way and you go your way , but as usual you refused and started adding on ridiculous conditions so don't try passing yourself off as the victim , the only ones who are victims is the people that have to put up with your constant crap.
You don't want and never did want to stop the flaming of the newsgroup , if you did you would just stop responding to any off topic post and go your own way.
It's that simple yet you want to add all kinds of conditions that have nothing to do with Bill and you.
If someone has a problem with Bill they can handle it themselves , they don't need you to protect them.

Ryan Faricy KC0DSZ wrote:

> On request of Bill Cheek and my thinking it's a good idea, I will explain
> mail servers (and a little bit about servers in general).

Ryan, how sad that you fell prey to one of Bill's tricks! Bill causes his trouble by getting others to do his dirty work for him. He asked you to explain servers. In essence, he asked you to spam & flame! Bill could make that post himself just as he asked you to. The only reason he gave was something about his killfile or twit filter. But that would only filter his INCOMING mail, NOT outgoing! Instead, he wanted you to do his dirty work!

He provoked you to flame & spam by:
1. Making a post he didn't want to make.
2. Posting a message that was off-topic for this NG.
3. Attempting to have you follow his ill-thought plan of belittling those who may not know what a server is.

> Servers serve. They process mail. They process commands. They do things.
> Bill runs his own servers.

How do you know Bill runs his own servers? Simply because he "said" he does? I could say I was a brain surgeon, but that does not make me a surgeon. The fact that Bill was unable to give a description indicates he knows little about them.

> They use log files. Those are used to keep track of problems, tracing
> problems, etc. ("Etc" means "and more"). They are good things. They also
> keep track of what email goes through the server. This log file helps

Of course you make no mention of other requirements for a server such as operating system, hardware platform, etc, I do applaude you! Ryan, your description, while being most basic in nature, was very amusing & entertaining. Although it gave no useful education on servers, it was like reading a advertising flyer on servers written by an advertising professional. Perhaps you should consider entering the field of advertising!

It did for me. I plonked Mackey a while back and the newsgroup has improved by
a considerable degree. I'm no longer aware of his:
1) incessant flaming
2) personal vendettas
3) mail bombing
4) forgeries
5) impersonation of legitimate users
6) abuse of servers where he has no authorization
7) unending off-topic postings
8) disrupting the newsgroup with unprovoked attacks
9) lying and hypocrisy
10) sheer stupidity in all things; and utter lack of ability to contribute
meaningful to the discussion of scanners.

I probably missed a few things.
10)

That was pretty good for most people but remember, this is JOHN we're talking about. You gotta do it like this:

Bills Big Servers

<page 1>

See Bill's Big Server. See it serve. See it serve mail!

<page 2>

See Bill. Bill runs the Big Server.

<page 3>

See the log file. See Bill reading the log file. See Bill laughing very loudly.

<page 4>

See the Big Server erase mail. Bill told the Big Server to do that. It always listens to Bill.

<page 5>

Now we know how Bill runs the Big Server. Wasn't that fun?

The End.

That is closer to the Scarlet Mackeral's comprehension level! ;-)

You mean TRUTH is not relevant? Whoooooey, pal,
you and me come from different tribes.....

> then your aggressive reaction to Mackey

I'm not aggressive to that idiot. You wouldn't
believe what I've put up with from that peckersnap
over the years.

> is that of someone whom the average person probably _wouldn't_ like otherwise.

Are you qualified and annointed to speak for the
"average person"? Who annointed you? What is
your logic?

> Very reactionary, overbearing and annoyingly loud.

THAT just has to be a judgment..... May I speak with
the jury, please?

> and it's a real pain in the ass for people to filter.

How can THAT be true? Filters are no big deal.

> Contrary to popular opinion around here, the twat filter was not
> meant for everyday use, it is meant for things like spam, extremely
> malicious loony-bin types (yes, yes, insert repetitious mackey joke here),
> and other exceptions to the rule. It's a very awkward way to try and split
> one channel of information into two parts.

Huh? Say what? Beg your pardon? How do you get off
trying to leverage opinion one way or the other? Twit
Filters are not a matter of opinion. They're there.
You use them or you don't. If you don't, that's your
problem, pal. Not mine. Not Mackey's. Not anyone else's.
Tools are for those who can or will use them.

> Just saying, "well you should learn how to filter"
> isn't good enough,

Of course not. But DOING it *is* good enough.

> it shouldn't have to be done on that magnitude. When people
> have to start using it to filter out half of the
> content and people of this group, it becomes much less
> accurate and takes a lot of fine tuning (and time), and
> for no good reason.

Ohhhh nooooo, that ain't so, pal There are NO "shoulds"
or "shouldn'ts" in this game. And you don't HAVE to do
anything. And filters are as accurate as you make them.
And the more you learn about them, the less time it takes.

Bottom line is that YOU don't get to command and dictate
the shoulds, shouldn'ts, and have-to's.....with one
singular, unique exception: you can dictate them to
yourself and to your computer. But that's it.

> I don't give a shit

Well, now there's a good start. Seriously. Me, neither.

> that it exists and would never seek to ban it or anyone
> from Usenet,

Good. Because you can't dictate to the Usenet.

> I used to enjoy doing it, but I'm not sure why you guys
> can't at least channelize it in one or the other of
> the *.radio.groups.

Well, I'm not sure why YOU can't learn how to use
a filter and to control your own computer. You ought
to beat the living snot out of it until it presents
you with exactly what you want to see.....and nothing
of what you don't want to see.

THAT is as good as it will ever get, fella. Until
the government takes it over, anyway..... unless,
of course, until YOU take it over and become the
emperor with no clothes on.....

Go for it. Or control your computer.

I've never heard the beeps on the EDACS system here in Hillsborough County, Florida. Instead the system transmits a loud "buzzsaw" sound and/or a dead air carrier, on otherwise unused freqs. causing the scanner to stop on those tx. rather than scanning for voice transmissions. It's worse than the beeps. At least there you can scan until it picks up a voice tx., and then you can hit the scan button to restart the scan. With this system the scanner is locking up constantly, regardless of whether there is any activity on the system.

Since SOMEONE (gee I wonder who) canceled this when I originally posted it, I think I may have struck a nerve. So here it is. And rest assured, if it gets canceled again, I will post it again. Keep canceling it, and I just might write a little program to automatically post it again upon being cancelled. Shouldn't be too difficult...

An excerpt from my next book, "Diary of a Loon - The John Mackey Story"

6/30/98, 3:21 AM
Dear diary,
Hello, it's me again. I just got done posting to rec.radio.scanner. Yup, it was the voices again. Those pills aren't helping me anymore, but flaming that jerk Bill Cheek sure helps. Uh, oh, they're calling me again. Be right back.

OK, I'm back. Boy those rec.radio.scanner guys sure are nasty. There was 30 replies to my last post, titled "I cannot post a forge." Why doesn't anyone believe me? I mean, I don't lie very often. I tell the truth all the time. I only lied when I had to do it. So what if that means all lies all the time. I mean, I tell people my name is John, which has to count for at least a half truth...

6/30/98, 5:21 AM
Dear diary,
Still can't sleep. Think I'll go post some more.

6/30/98, 7:32 AM
Dear diary,
Ooooooh that BILL CHEEK!!!! Called me a hermie again. We can't have that!! I want the flames to end! I do! Really! (Nooo not really!) Hey who wrote that?! I didn't! IT'S A FORGE!!!! A FORGE BY BILL CHEEEEEEEK!! BILL CHEEEEK IS FORGING POSTS IN MY DIARY!!!! LOOK, LOOK!!!!

Want more? Reserve your copy of "Diary of a Loon" today!

Well, it is also tiring how rank amateurs (not you)
can hide behind an AOL screen name and bother the
hell out of people.....like our recently demised
OBFD@AOL.COM Remember that retard?

> I have used AOL for years and believe it or not, it
> is one of the most reliable

Ummmm, sure. And I recommend it for some of my
clients....and as a backup connection for all my
clients. I use Compuserve for my backup, but AOL
is just as good in that respect.

> ISPs I have ever had and believe me,

That's the rub. AOL isn't a real ISP. You can't
use any client software that they don't allow from
their UI....like e-mail, FTP, and Newsgroup clients
for sure. Their e-mail and NG UI's just suck <gack>!

> For $20 a month, you get unlimited (supposedly) access with five e-mail
> accounts. Not many ISPs will offer as much.

True. That's one reason why AOL is a great backup
connection for small businesses and homebodies.

> And, if you "bring your own access" like I do,
> AOL runs $11 a month.

What does that mean? Like, if I use a direct
Internet connection over to AOL, (not dialup),
then it's $11/mo? I might could like that.....
I could frappe Smacksie as "SkullCracker" and
he'd not know who did it. heh heh heh

Hee hee hee.....now that's guaranteed to get a huffy
reply. Been there. Done that. You better duck
and run for saying that. heh heh heh......

Well, good luck on convincing people AOL is an ISP.
I don't see it, meself. Not logically, and not in
the framework of the preponderant majority that are
ISP's. Aren't they better termed as an Information
Service with a gateway to the Internet?

I live near the Dallas/Fort Worth Airport which uses an EDACS
system. It also has the buzzsaw that rotates 10 seconds on each
voice channel. when the system is busy I have heard new converstations
start right after one finishes and before the 4 beeps end, and have
all channels busy with no buzzsaw, so i don't think it wastes airtime.

The electric company here operates an EDACS system but instead of the
4 beeps when they unkey, it makes what sounds like about 200 Hz tone
at a low level (like PL) for about 1 second before the carrier drops.
also the data channel is 4800 baud instead of 9600 baud like the
public safety systems.

I took a look at their site and did not see any mention of a copyright claim. I'm not a lawyer...but my guess is that they are not attempting to copyright the freqs (they can't) but are attempting to copyright the way the information is presented. You could not copyright a simple list of links, for example, but if your list was done in a particularly unique way, I believe you can copyright that.

I am looking to lease/rent space for a cellular or compatible transmitters
on a tower located in St. Louis County Missouri. LAT 38.57703 LON -90.52553

We have a tower 100' tall with space for one more transmitter.
The tower is owned by South Western Bell and have 2 transmitters leased
by ATT and SWB.

Please let me know if you interested in leasing the space or
have any ideas on how to lease the addtional space.

Thanks for your help.

>idea of the cause of my problem?

This isn't such as easy operation I'm afraid and requires you to take
your radio apart to some degree.

You will find details on our web pages if you want to take a look.

http://www.javiation.co.uk/cpu1.html

As you have the AR1000XLT you will probably find that you need to follow
the instructions for the AR2000 rather than the AR1000.

<bengt.brodin@helsingborg.se> wrote:

>Looking for hints how to find a discriminator output on the
>IC-R7000 receiver ?

Hi Bengt,

Here is where to pull discriminator audio out of your R7000 to use
with various decoders that want clean audio. Use a short piece of
audio shielded cable to the spare jack on the back of your R7000:

By far the best place is junction of C131, C84 and R99 on I.F. board.
This is on the bottom of the board. Very difficult bordering on
impossible to get to this point fron the top of the board. Take output
through a .01-.05 cap to block DC present at this point.

Not quite as high an impedance, distant second choice, but easier to
get to from the top of the board, is junction of R97, R99, C87, C115,
etc. This is the other side of R99 as preferred method. Again need to
go through a cap.

If you have the service manual or schematic, these points
geographically are between Q13 and X3, 1/2 way down and 2 inches in
from the right of the schematic.

Be careful not to load the discriminator output too heavily, as it is
a high impedance point.

Hope this helps.

I'm glad you think my getting a ham license was a good thing, but you've got a few problems to work out. Maybe if you stopped all of these, you would be accepted. When you do this flaming crap, I *really* don't want to have anything to do with you.

1) You insult people who participate in flames.
2) You commence flame threads, which shows you don't care to stop.
3) Almost every message of yours contains negative words

Again, quit this, and you might find its a better life. What do you do in the morning? Wake up and say, "Ah, I think I will brush my teeth and get a bite to eat, and then go insult some people" ?

Not much of a life to me. So ... get one.

You could try the translator at Alta Vista - they may have it in their idiom dictionary. Just type in "Delicious Pain" and translate to German.

Hello,
For some time I was looking to buy a scanner. But I am not very
familiar w/ the subject to much. Should I buy one w/ trunk tracking,
handheld or base, how many channels, and is it modifiable? What is a good
company to buy one from, Uniden is the only company I have seen so far. The
best I have seen so far (I think) is a 500 channel bearcat base scanner w/
the range of 25Mhz to 1.3Ghz for the price of $359.
Is it worth it? Can someone knowledgeable please respond w/ some help.
Also any books that you can recommend will be appreciated.
Thanks,
TelaTr0n@rotfl.com

>You don't understand because you use AOL.

Only rank amateurs knock AOL these days since it is a very tired notion... I have used AOL for years and believe it or not, it is one of the most reliable ISPs I have ever had and believe me, I have had at least a dozen.

For $20 a month, you get unlimited (supposedly) access with five e-mail accounts. Not many ISPs will offer as much. And, if you "bring your own access" like I do, AOL runs $11 a month. I pay a mere $8.95 a month for my unlimited access ISP, by the way.

I've been using a variety of on-line services long before you were born, sonny boy, so you better listen to your elders!

Ryan, someone told me you'd be a good candidate
to remove from my Twit List. Okay. How's about
doing me a teeny weeny favor? Explain to the
Idiot Smacksie all about servers and how they
write log files of everything that happens.

Explain to him that I run my own servers and
as the Head BadAss In Charge here, there ain't a
thing that's going to escape my attention.

Obviously, when he can't understand something,
his first knee-jerk is to scream "Liar liar,
pants on fire!" but perhaps you could show him
the lunacy of his ways? (Although how do YOU
explain to a lunatic that he is a lunatic?)

The cosmos knows I've tried to open up his mind
and can't get past the snot bubbles dangling from
the end of his schnoz. Maybe you can do better?

Anyway, Smacksie is back on my Twit List and
I'm not sure of what he's sniveling about this
time other than "Liar liar....." Sheesh!

Your mission, should you choose to accept it, is
to translate high English down to 2 and 3 letter
words so Smacksie can perhaps garner a feeble
grip on the concepts.

If he rags you, just slap 'im up side the jowls hard enough to make his lips go, "Blippety, blippety, blippety, blip, blippety-blip" and then stick him on your Twit List, too.

No one else has been able to reach the Idiot. You're not likely to succeed either. But it might be a good exercise for you in utter futility.

You'll need to educate yourself on what a trunked radio system is
and if you have them in your area, you might consider getting a
TrunkTracker to do the most efficient monitoring of such.

Stop by my New Scanner Users FAQ :

http://www.strongsignals.net/htm/new_user.htm

and read everything there.

> What is a good company to buy one from, Uniden is the only company
> I have seen so far. The best I have seen so far (I think) is a 500

Only you can answer that. For a 'primer' on picking a scanner/receiver
stop by these pages :

http://www.strongsignals.net/htm/pickrecv.htm
http://www.strongsignals.net/htm/features.htm

For a list of today's players as well as the hottest selling radios,
see the following :

http://www.strongsignals.net/htm/manufact.htm
http://www.strongsignals.net/htm/hottest.htm

> Also any books that you can recommend will be appreciated.

Try my resources page :

http://www.strongsignals.net/htm/resource.htm

When you're ready to purchase, try my Scanner Dealers FAQ :

http://www.strongsignals.net/htm/dealers.htm

Read all these pages and you'll be in a MUCH better position
from which to buy a receiver that fits your budget and gets
you what you want.

Good luck and let me know if there's anything I can help
answer!

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 813-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. | Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200. |
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) | and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service | manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested.

Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks,

not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

http://patent.womplex.ibm.com

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a | user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for | BC800XLT capacitor locations and repair information. |

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

It's true that the Trunktrackers (BC235/895s) only trunktrack on Motorola systems. Briefly, trunked systems have a set of freqs, about 10 in my area, that are part of the trunked system. One of the freqs is used as a full-time data channel used to coordinate the various mobiles in the field. Each mobile is assigned to a talk group (or user group) with a numeric ID tag used by the system to retransmit the comm to others in the same group. Each time a mobile keys up, it's ID is recognized by the central system and a frequency is assigned for that particular transmission. There is no guarantee that subsequent keying will be transmitted on the same freq - so the replies back and forth may be on different freqs with each press of the mike. This is known as frequency hopping.

So the trunktracker locks in on the data channel, and instead of scanning the channels in the traditional sense, monitors the data channel, and when a transmission occurs, you hear the audio and view the talk group ID number. With the trunktrackers, you can single out an ID and only listen to that group, you can define multiple groups and only listen to those select groups, you can lock out multiple groups, and you can listen to all groups. Very flexible system and fairly easy to use once you understand what's going on. With this monitoring system, you have the option of assured conversation monitoring, even in the event that the underlying freq changes from one reply to another.

You MAY scan a trunked system (locking out the data channel which occasionally changes from one freq to another) and listen to all conversations across all user groups. Using this technique, you are not ASSURED of catching a reply, or tracking a full conversation, especially with busy trunked systems. Trunktracking really advances the state of monitoring by giving you controls that are not available with regular scanning.

Note that trunktracking only works with 800mhz Motorola systems. There are other trunked systems in the 400mhz (and probably other) areas in the spectrum which don't work with TT.

To your point, the GE/ER trunked systems may be scanned as well. However, our fine friends at Ericsson have engineered their trunk systems with features that only seem designed (IMHO) to thwart scannists from listening in. I have no official knowledge that my opinion is valid.

To scan an Ericsson system, you would lock out the data channel as with Moto, however, at the end of each transmission (once the key is released) instead of releasing the carrier signal - where

the scanner would resume scanning - a series of 4 beep tones are
transmitted SLOWLY. These beeps hold the scanner on the channel.
By the time the beeps have stopped and the transmission ends,
you have likely missed the reply - which by the way will ALWAYS
be on another frequency. It seems the Ericsson system forces a
frequency hop every time.

There's an Ericsson system in my town, and I'm afraid Ericssons
system of irritating scannists works. It is a genuine pain
in the posterior to monitor. I understand that there are some
products designed to work with scanners on these systems which
make scanning tolerable, but I have no first-hand knowledge of
these and can't comment on them.

Since a significant benefit of trunking is supporting more mobiles
with less bandwidth, I have to believe that the Ericsson systems
are far less efficient - requiring more voice channels - than
a comparable Moto system, since the hold times on an Ericsson
system are by default much greater. I hope that some savvy Moto
marketing guru picks up on this and blasts them for doing this
evil deed.

In any event, the BC895XLT is a great scanner even without TT
capability. The freq coverage is good, the search speed is
great, and with the potential for computer control along with
a host of other cool features (like built-in CTSS) I don't
think you'll regret owning one. The cost ain't bad for what you
get.

As more trunked systems go digital - as was part of this original
discussion - every scanner on the market is screwed. Decoding
PCM isn't rocket science, but I don't know of any scanners that
do it, and as I pointed out in an earlier post, during extreme
conditions, reverting back to analog may always be a fallback.

Enjoy,

Kent

On request of Bill Cheek and my thinking it's a good idea, I will explain mail servers (and a little bit about servers in general).

Servers serve. They process mail. They process commands. They do things. Bill runs his own servers.

They use log files. Those are used to keep track of problems, tracing problems, etc. ("Etc" means "and more"). They are good things. They also keep track of what email goes through the server. This log file helps Bill to know everything that goes on with his own servers.

Servers are programmable. They can be programmed to automatically delete things, in this case, email bombs, but also spam. But, this feature can also be disabled at any time, allowing the server owner to delete things manually. "Things" in this context means "emails".

Ok?

We (my dad and I) 've tried almost a dozen, also, so...

America Online is not really an Internet Service Provider, because it doesn't provide SMTP, POP3, or NNTP outside of its program, but it does provide Internet.

We currently use:
- CompuServe (rfaricy@csi.com, rfaricy@compuserve.com, 110427.3421@compuserve.com)
- AT&T WorldNet (jtonsa@worldnet.att.net, jtonsa@att.net)
- America Online (we use it to help on the PC Hardware forum ONLY) rtfaricy@aol.com, btonss@aol.com, jptonsager@aol.com, kc0dsz@aol.com

We've also used:
- PC Online
- MinnNet
- Netcom
- an ISP of whose name I've forgotten
- MSN - Microsoft Network

Inversion Layer propagation. When hot air gets trapped under a mass of cold air, the interface forms a duct that essentially pipes VHF/UHF radio signals from end to end with relatively low loss.

When ducting occurs, I can usually hear all sorts of stuff from San Diego in my office in LA - the navy's trunked systems, something that I'm assuming is their new high-tech center near old-town, border patrol portables out at Brown Field... you name it. On occasion, a 220 repeater out in Chula Vista wipes out a local repeater on Mt. Wilson!

I've also been able to make some rather incredible simplex contacts during ducting, but nothing like the Ca. <-> Hawaii contacts of legend... 8*(

Enjoy it while you can!

I have been currently doing much research into various trunked systems in the Greater Cleveland area. I would love to exchange Group IDs and Radio IDs for the following systems: EDACS Parma, EDACS NASA Lewis Research Center, Motorola Brookpark, Motorola CEI, Motorola ASTRO Cleveland and other regional systems. If anyone knows anyway to allow Trunker or Etrunk to scan individual radio interconnects, telephone patches, and digital voice, that would be helpful also. Does anyone know if the RAM Mobile Data Network in NE Ohio uses encryption, I have tried monitoring it, but have not rendered anything readable. Finally, I would like to have the means or software to decode APCO Project 25 digital voice via computer or other source . . . or If you have the guts to work on such a program, let me know. That's about it for know . . . .

366. Florida Fires: 800Mhz systems working well

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: Karl Dahlquist <karldahlquist@vistagroupusa.com>
Message-ID: <6njd46$r08$1@birch.prod.itd.earthlink.net>
Source record: 154018

Of course, this doesnt mention if its trunked...but i assume it is.

July 3, 1998
County says system bats 800 in emergency
By ANTHONY COLAROSSI
Staff Writer
For all the knocks users have given Volusia County's 800 MHz emergency communications system, officials both in command and out in the field say the radios have worked well during the fires.

While the system is breaking all-time daily usage records, county communications director Bob Weiss insists it has suffered no major failures.

"It hasn't missed a step that I know of," Weiss said. "We've needed all 27 channels hot and heavy."

"The lifeline is the 800 MHz system," he added.

Although many in the public and the emergency services community have developed a negative impression about the countywide communications system, Weiss said those opinions are not always warranted.

"There's no way in the world we could fight this fire with the old communications system. It would have been very difficult to pull so many different agencies together like we're doing here."

Before Volusia County and most of its municipalities invested in the $14.2 million 800 MHz system, the different agencies operated on separate VHF systems. The new system was intended to provide seamless communications between county and local law enforcement and emergency departments.

Firefighting teams coming in from out of the area are hooked up with county fire officials and given one of the 800 MHz radios, Weiss said. About 60 radios have been lent to visiting crews.

Aside from the radios, county firefighters, emergency workers and support personnel also have requested and received 70 new cellular telephones during the fires, Weiss said.

"I think virtually everyone has their own cell phone," Weiss said. Cell phone access helps emergency workers communicate with civilians and each other, he added.

BellSouth Mobility, the official communications company handling state disasters, said it expected to deliver more than 600 cellular phones for fire-related reasons to several counties fighting fires by the end of the day Friday.

"We are marshaling all the available phones we have in the north Florida market," said Richard Aylward, marketing manager BellSouth Mobility in the northern part of the state.

"A lot of land lines are down, and a lot of power is out," said Aylward.

The company also has set up additional cellular sites and channels for firefighters to call home and for displaced residents at area shelters.

And if all the emergency radio systems and cellular and land-line phones should fail, there are always the amateur operators working their VHF radios. The battery-operated radio operations are stationed at the county's Emergency Operations Center and many of the evacuation shelters, according to William J. Crandall, who coordinates emergency amateur radio operations on the west side of the county.

"If they lost all their communications, we would still be there with our battery-operated systems," Crandall said. "When push comes to shove, we're right there to kick it along."

All conflicts begin with polite nudges or misunderstood messages. If the conflict escalates, it does so only by the wishes of the participants. (Which now includes you, I might add.) This is an unmoderated communication channel. Everyone with access and interest can come in here and air an opinion. There's no entrance exam, no proof of moral character, not even a declaration of intent; just find your way here, and you're in!

So everybody gets in. We all start interacting, and lo' and behold: We find out some people here are not nice! It shouldn't come as a surprise. Some of the people I work with are not nice. So you have to deal with it; or take over the world.

>There are really only two main things that bother me about it:

> 1. The way people are treated when they speak out about it. Often these
> people are new and just now finding their way around. They don't know the
> history of the situation and don't care. They can't just whip up filtering
> because they don't know how yet. They may not even use a client that
> supports filters. And they assume they've come into a neat place of info
> with other reasonably mature people who share their interest.

Then they assumed an awful lot Brad. They may have assumed that an unmoderated NG was a neat (as in "structured"?) place of info, populated with warm, smiling denizens; but they learned different real quick, didn't they Brad? One or two things
happened after that lesson; they learned how too work around it, or through it, *or*
They ran away from it.

You run away from a Bear.
You run away from a Train.
If you run away from words on a computer screen; you're a frail creature indeed.

So you have more sympathy for those wretched souls than I. Maybe someone will provide them the moderated care they deserve. A defender. Someone they can look up to. Someone who will purge anything the flock might find distasteful.
I ain't doing it. Do you have the time to do it Brad? Do you really want to?

> 2. It's flat out embarrassing to send someone here if you are trying to
> introduce them to this hobby.

You perceive it as embarrassing. Other's you send here may not perceive it that way.They may even see you participating in the off-topic banter and still not perceive it that
way. C'mon Brad, you obviously learned the ropes, and I think that'll you'll find most
people will learn it too. You gotta give 'em credit to learn as you did. You have to
acknowledge that it's possible. To believe otherwise would indicate that you're holding
yourself out to be superior.

> Hey, I know it's a free country, I'm not trying to control anything.

I know Brad.

> It
> just sucks when the people who cause it are smart enough to know that simply
> doing it somewhere else, or handling it a different way, would greatly
> reduce friction in general. It's just a shame, that's all.

Well, whaddya gonna do? Are you going to start a Crusade in unmoderatedville? Are you going to work around it with filters? Are you going to just work through it and not let those big 'ole bad words hurt you?

Or are you just gonna sit there and keep whining about it.

I am sorry for your unfortunate experience with them.

Based on the current NASTY tone of postings to these groups recently,
I challenged CEI here publicly regarding these "fees", in a courteous
manner, and was answered in same. Conclusions drawn are those of the
reader.

I obviously do not work for CEI, and felt a polite post about MY
experience with them was appropriate.

The continuos flow of venom here is disturbing.

Dan

Yo! Smacksie-poo. Here's one more try at it.
I'll take you off my Twit List for a fair and
reasonable opportunity to hammer this down.

Here's the deal. First, I can't speak for
anyone but me. You can't speak for anyone but
you. With that in mind, there is NO CHANCE
of perverting the below contract to include
anyone else but thee and me. Now read and
heed....don't change it; don't add to it; don't
do anything to it; just accept it or mention WHY NOT.

1. You and I don't communicate TO each other.
2. You and I don't communicate ABOUT each other.
3. You and I don't REFER TO each other.
4. You and I don't THINK about each other.
5. Period. No if's, and's, or's or but's.....

Now what is so wrong with this contract?

Understood. He clearly wanted the imaging, and that's really the only
easy hope of getting cell if you want it these days. So the "but" was
written from his perspective.

And that's kind of why I made the distinction between my experience with the
pro 26 and the Icom W32A. I don't mind the images on the pro 26 because I'm
honestly not hearing any more out of band imaging than with the pro 64
(other than cell) under average, everyday conditions. But it most
definitely ruins the W32A's receiver, especially noted in the 2m band,
horrible problems that ruin the fun of the radio in general. Given my
druthers, I'd agree on wanting triple conversion over rx of cell images.
But I actually like the happy medium of the pro26 the best.

In regards to frequency use for bugging,

The frequencies are changed, and sometimes more than once an hour, this protects the bug from detection.

Professional devices run very high in frequency, and are often encoded.

The best advice would be to research bug detection equipment, pay attention to (Those darn ranges) and scan them.

Private spies and other domestic snoops use the following, modified cordless phones, baby monitors, snap kits and some over the counter stuff like microphones for vcr's.

Simply put, if the bugger used the same frequency as everyone else in the building being bugged, it would be impossible for him to hear what you were doing from everyone else.

Besides, 1/2 the fun is finding something new.

Best of luck, J...

There you go again John adding conditions, I said the deal below and no
adding any of your stupid conditions.
Just proves your a liar when you state that you want the flames to stop.

And just so everyone can see what the complete deal you just turned down
again the whole message to you is below.

Mackey your a liar and have been proven one many times over.
Ok here is a very simple deal that you should be able to understand, and

there is no adding of conditions by you allowed.
I know Bill will accept the deal below but will you Mackey ?

Then WHERE is the PROOF? If it has been proven many times over,
it should be easy to provide that proof!

My Proof is below where you try to add conditions again.

> As of July 4th you stop posting any off topic messages..
> Bill and you go your seperate ways on the newsgroup.
> You leave Bill alone and he will do the same.
> You do not mention Bill in any of your postings.
> You do not use any alias to post to this newsgroup.
> You do not send Bill any email.
> You do not respond to any off topic postings that way they will stop
> also.

I accept this deal with one addition:
NO flames, attacks, or nasty messages.

There you go again John, editing the message and not showing the
complete side of what was said .
The truth is really getting to you , so you have to edit the message
when you quote it .

John go take a flying leap.
Your the one doing the flaming and harassing on the newsgroup , all you
have do is stop posting and it will cease , but then again you don't
want it to cease .

That is simple to answer , John wants to be net cop so he won't agree to
any of the terms.
He has to keep adding conditions on because he knows you won't let him
play net cop..

>renders any blame pointless. You guys enjoy it, as you know, that's no
>secret. There are really only two main things that bother me about it:

There's ONE PERSON who's the basis of most of the problems you speak
about in your post. Until that person "grows up" or goes away, the
root of the problem will remain. The best you can hope for is to
convince the supporting cast to stop supporting or instigating that
person, but that's pretty unlikely, too, given the history of the
situation.

About all you can do is post more "signal" to improve the S/N ratio.
If there were 200 posts a day about scanners here in the newsgroup,
the flame wars would not appear to be such a major factor.

It was a foregone conclusion..... And if you
take a long, strong look at his add-ons, you'll
see where they are designed to prevent me from
responding to OTHERS' attacks and flames. Which
means he could then go incognito and come back
at me from another AKA and I wouldn't be able to
return fire. He's so damn stupid he thinks
everyone else is stupid, too.

With my proposal, it's limited to just HIM and
ME.....so under his own name, he could never
again come at me so long as I kept my end. But
I'd still be free to lambaste his AKA's and other
shitbirds who wanted some of me..... Of course,
if everyone backed off..??...but that's asking a lot.

One only wonders WHO anyone is anymore..... Shit,
for all you know *I* could be Smacksie....under cover.
(But I'm not! And every day I thank the Cosmos!) :-)

I don't think Smacksie ever HAD any support other than
from his AKA's and perhaps a flake and a fruitcake or two.
The weeny is a real loser from the git-go..... He ain't
got a hair in his hiney to accept my contract.

It would defeat his purpose for existence.....

> > You do not send Bill any email.
> > You do not respond to any off topic postings that way they will stop
> > also.

I need to be very clear, though.....I reserve
the right to deal as I see fit with anyone who
comes at me FIRST. It's already etched into
stone that I won't attack or flame anyone
FIRST. But if they try to have a go at me,
then all bets are off..... but that is exactly
what Mackey is trying to trick me into.

Then he'd be free to don a new A.K.A. and
come at me from whatever angle he wants.
And I'd have to sit there and take it. Ohhhhh
wouldn't he love that?

That's why I won't buy it. Though I will make
the same deal I offered to Smacksie with ANYONE
else, one-on-one, who agrees to abide the same
terms. So if everyone has purity of intentions,
then my contract is utterly ironclad and as
perfect as it can get.

But that's why the shitbirds don't want it.

:-)

Smacksie....you friggin idiot....I take you off
my Shit List for a single minute and here you
are with your screech of "lies" again. "Lies"
and "fool" are your favorite words, smegma breath.

One doesn't need to wonder why.

Anyway, you damned imbecile, I run MY OWN servers
here....Microsoft BackOffice including NT4.0 Server.
Now YOU look 'em up and see what they're capable of.
Look 'em all up, you halfwit....NT4.0 Server; SQL
Server; IIs Server; Index Server; Exchange Server;
and the rest of the pack. Check 'em, weeny-washer.

I *am* the server-admin, you dumbshit, and I can
tell at a glance anything that comes in or goes out.
Your 30-MB of trash was seen as arriving at one
instant and being deleted a few seconds later.
It doesn't take a genius to manage that kind of
thing, you flippin half-witted nitwit lunatic.

Geezus, where the hell were you when God passed
out brains? You must've thought He said "trains"
and replied that you'd take the next one, not
realizing it was the LAST one He was offering you.

You friggin, flippin, screaming phetid phairy.

Go flagellate yourself. Damned idiot........

I need help..
I'm an electronics virgin (so be gentle) trying to use MDT1234 and I have a few questions...

#1
Can I use the All-In-One interface even though I won't be using 2 computers??

#2
The discriminator pin chart lists 3 "pins of interest" but the cable that connects the scanner with the interface unit is 2 conductor.....is it correct to use one conductor for the audio baseband pin and the other conductor for a ground location near the discriminator chip??

#3
(be especially gentle with me on this one) how do I use the ohm portion of my multi tester??

thanks in advance

I certainly wouldn't classify the Pro-91 as a piece of junk as compared to the Pro-90. In fact it happens to be superior to the Pro-90 in several ways. The ONLY complaint that I have about the Pro-91 is that it has a higher "white noise level" (at least that's what I call it) as compared to the Pro-90. I understand that there is a modification that can improve the audio performance of the Pro-91. If anyone can tell me about it, then please do.

Brent Corbin wrote in message <6nj7fu$3do$1@carroll.library.ucla.edu>...

Mike, you are just another hostage of the"tune to the cops so you don't get caught" mind game.

If you are such an expert at "beating the odds" then go to a Las Vegas casino.

Also, can you "defeat the IRS at their own game"? http://www.cats.org

Enclosed are the lyrics for the song "I fought the law and the law won"
As for me, I would rather work with the police then Fear the Police!

Your homework assignment is contact these organizations
and explain the them about how you, as a law abiding citizen,
use your radio to protect your community from crime.

Lawful Resistance to Crime! CPC 692-694

CALIFORNIA CODES
PENAL CODE
SECTION 692-694

692. Lawful resistance to the commission of a public offense may be made:
1. By the party about to be injured;
2. By other parties.

693. Resistance sufficient to prevent the offense may be made by the party about to be injured:
1. To prevent an offense against his person, or his family, or some member thereof.
2. To prevent an illegal attempt by force to take or injure property in his lawful possession.

694. Any other person, in aid or defense of the person about to be injured, may make resistance sufficient to prevent the offense.

Non Album Tracks

I Fought The Law

Breakin' rocks in the hot sun
I fought the law and the law won (twice)
I needed money 'cause I had none
I fought the law and the law won (twice)

I left my baby and it feels so bad
I guess my race is run
She's the best girl that I ever had
I fought the law and the law won
I fought the law and the law won

Robbin' people with a six-gun
I fought the law and the law won (twice)
I miss my baby and the fun
I fought the law and the law won (twice)

I left my baby and it feels so bad
I guess my race is run
She's the best girl that I ever had
I fought the law and the law won
I fought the law and the law won

406. FS:*TINY* IBM Palmtop PC-INCREDIBLE UNIT!

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: jg <jgom@bigfoot.com>

Not a laptop, sub notebook or phony WIN CE device, this is a full blown WIN95,DOS,LINUX or WIN311 capable miniature computer (486/sx33).
Imported from Japan (Bought in December 97).
Very, Very small like a tiny IBM ThinkPad. FULL COLOR.
Has 2 PCMCIA PORTS & 1 Compact FLASH Slot.
Includes 105MB Type III PCMCIA HD.
8 MB RAM (Expanable to 20MB).
Built in 24/9600 MODEM
Built in TELEPHONE!
Infared ird
PS2 capable w/ optional adpater
Optional Docking Bay & Floppy available.

AWSOME UNIT - Nothing comes close (not the Libretto either) & these are RARE.
A MUST HAVE for the real TECH GADGET guys!
Use it to program your 2-Way RADIOs with the included Socket I/O Serial Port card ($149 value).
Or for PACKET/SCANNING etc...
Check out more details by going to http://www.the-gadgeteer.com/pc110.html and follow some of the links to see pics, get more specs, etc....

This message was submitted using a PC110 & a Ricochet modem!

So again this deal includes:
IBM PC110 (YD1 model) 486/SX 33
8MB RAM (Expandable to 20MB)
105 MB Type III PCMCIA Removeable Hard Drive (takes up both PC Card Slots).
AC Adapter/Chgr.
Socket I/O Serial Port PCMCIA card (gives you 1 DB9 connection).
Soft PADDED carry case w/ MOTOROLA logo.

BEATS LUGGING AROUND A LAPTOP TO PROGRAM RADIOS!
No more klunky packet/scanning setups.

$500.00 shipped to your door anywhere in USA (continental).

jgom@bigfoot.com

-Trust me, you gotta see this thing to believe it!!!!!!! IT IS AWSOME.

407. FS:OPTO Xplorer/ICOM R100/DC442+ MORE! Complete PRO setup!

*** F O R S A L E ***

Optoelectronics XPLORER - Near Field FM Test Receiver-
An absolutely AWSOME piece of equipment, not much more I need to say
check out opto's
website for full specs this puppy does it all. Unit is in MINT
condition, not one nick or barely a
fingerprint on it. Bought it about 1 year ago (last August) and maybe
used it a total of 2 hours max
since I bought it, just sat in protective case since then.
Includes 2 antennas, protective Opto case, AC adapter, Manual, software
& 2 PC cables. (paid
over $1000 for all this direct from Opto).
$675

ICOM r100 Receiver.
MINT (BRAND new).
Bought this about 6 mos ago & now it sits idle (got a PCR1000 since).
Brand new w/ discriminator squelch tap mod jack in rear (perfectly
done).
Sorry do not have box or mtg bracket. Includes manual, AC adapter.
$650 (lists for over 800)

Optoelectronics DC442+ (PLUS model) Decoder w/NiCads.
Excellent add on to any setup, used with R100 above, absoultely MINT
condition, barely used.
Has internal Nicads for portable use & *LTR* deocde option.
AC adapter, Manual, PC RS232 cable for data dump to any PC.
$275 (again this unit is in perfect condition - paid 349 for it).

POCSAG deocding System (commercial device, not a toy!)
Not a sound card program or cheesy hamcomm interface.
A compact self-contained 512-9600 baud POCSAG (no flex) decoder,
connects to PC comm
port. Works with any scanner but best used with above Icom R100 &
discriminator tap.
Includes custom decoding software & paging TAP dial out / alarming
software.
Law enforcement performance grade, barely used!
Includes manual, DB25 interface, software paclage & license key.
$175 (again NOT a toy & you assume responsibilty for its use! Sells new
for over $300)

Signal Intelligence SCAN*STAR Industrial software package.
Professional grade monitoring/traffic software. Not play software. High
end program, limitless

applications, does LTR, DTMF, Audio logging, Traffic monitoring, Signal Scope, Everything! (use
with DC442+ above & OptoLinx).
Get full specs at www.scanstar.com.
Includes software, manual, hardware license key.
$225

Garmin GPS II
Includes Mobile mounting bracket, manual, PC interface cable, carry strap & 2 HIGH Gain GPS
antenna (one for mobile w/several feet of RG174 & BNC connector & one to replace the stock
antenna both antennas are easily worth over the $200 alone).
Super performing system, all in excellent condition.
$200.

ALL OF THE ABOVE EQUIPMENT IS IN ABSOLUTELY MINT CONDITION, MOST BOUGHT LESS THAN A YEAR AGO FOR ONE SPECIFIC PROJECT. ALL BOUGHT DIRECT FROM FACTORY/DISTRIBUTOR 1st HAND BY ME & SHOULD STILL BE UNDER WARRANTY.

NO TRADES, PRE-PAYMENT ONLY - NO UPS COD'S (FED-EX OK).
-shipping extra-but,

WILL SELL ALL AS A PACKAGE FOR $2,000.00 SHIPPED TO YOUR DOOR.
(save big $$$ over buying new from store - it is all practicslly new & I pay shipping + I will throw in
some good extras!!!).

I am located in the San Francisco Bay Area (Fremont), CA - Locals welcome to come & inspect.

PLEASE EMAIL- jgom@bigfoot.com for more details.

---SERIOUS INQUIRIES ONLY PLEASE---

408. Bill & John cost me $29

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: Howard <Howard*V@Bigfoot.com>
Message-ID: <359DA805.2BE0FB04@Bigfoot.com>
Source record: 154060

I've always used Netscape 4.x for my discussion group reading (I know it's not the best, but it was convenient and free). I tried using filters as discussed before on this ng, but then I found Netscapes filters only worked on e-mail, not the ng (I could be wrong, but I couldn't figure it out - if it is possible with Netscape).

I just purchased Agent as a newsreader and paid $29. I'm supposed to be able to download in within one day - after they process my order. I know I can easily use filters with Agent. I tried Free Agent, but it was missing quite a few capabilities which are incorporated in the full program, so I had to pitch out the dough for a better program (mainly because of the trash in this ng - and PLEASE don't ask me to explain what I consider trash <g>).

Bill - When I got into scanners about 1 1/2 years ago, I saw your name everywhere and I considered you the "god" of scanners. I have even purchased your books. When I first discovered this newsgroup, I was amazed to see posts from the great Bill Cheek on here. I was honored to have found this group and to see you helping people here.

However, I'm really sorry to see that you have been mixed in with all these flames and constant off topic posts. As much as I enjoy reading your responses to legitimate scanner questions, browsing this ng is getting to be way too time consuming. As you know, not everyone has a lightening fast connection to the net, and that includes me. I have to wait extra time for all these flames to download.

At first, I thought many of the "flame" posts were funny and enjoyed reading them. But, uuuhhhh, I found other ng's dedicated to humor and flames. I thought this one was about scanners.

I don't know John and don't care to know about him. I can just see many people hate him. It appears that maybe he's just trying to get attention (kind of like when a baby cries to get attention). If his posts are ignored, I think he will eventually go away (no, not after a day or week, but it will happen). John, the same goes for you too. If you stop responding to all the other members flaming posts, they will eventually stop posting messages about you.

So what's $29 to stop all this nonsense. It'll probably be worth every penny of it. This isn't all bad, because it has forced me to learn a new program - and learning is always a good thing.

Thanks for reading and happy scanning.

Howard

please remove the "*" before e-mailing me.

P.S. - Just a thought from one subscriber.

409. Re: RS TRUNKTRACKER SCANNERS

Newsgroup: rec.radio.scanner

Source record: 154061

Here in Houston the Harris County system has a feature called SmartZone, SmartNet or SmartSomething or Other. There is more than one control channel and to properly use a trunktracker radio you must delete one of the control channels to make sure it is tracking the correct part of the system. With the Pro-90 you just have to guess that because you don't hear a lot of traffic or that the talkgroup ID's are unfamiliar that you are locked on to the wrong control frequency. On the Pro-91 it is very easy to determine if you are on the correct control channel because it displays the number of channels that are being trunked. For example if it is on the correct control channel it usually will display a relatively high number such as 25. If it is on the outer control frequency it displays maybe 4 or 5.
The Pro-91 can use either standard AA batteries or rechargeable NiCd batteries that are compatible with the power supply that I already use to power and charge my other RadioShack brand scanners. The Pro-90 uses only a rechargeable battery pack so if it is dead then you either have to have another battery pack ready or wait for the dead battery to charge up. I travel alot and the convience of having a choice of batteries is nice.
I don't mind 150 channels on the Pro-91. I use it mainly for monitoring trunked systems and I don't have more than 5 systems like that in my area that I want to monitor.
I don't know what kind of equipment others use to guage a receivers performance, but the Pro-91 receives just as well as the Pro-90 that I set it next to and listened to for a day.
I prefer the programming method used on the Pro-91 over the Pro-90. This however is a personal preference and doesn't necessarily make the Pro-91 superior.
The display on the Pro-91 is larger than the Pro-90 and is easier to read.
The Pro-91 certainly isn't my "dream scanner" but I don't think it can be called inferior to the Pro-90.

410. DOS 2.11 and less than 512K for CE232

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: "E. Scott Sykes/KF4NDQ" <arizonet@uswest.net>

Hello Bill,
I thought that you would find this interesting:

Using a Toshiba T1000 laptop (the oldest floppy only) with
Toshiba DOS 2.11 and 512k of memory I have the CE232
software
running. This incudes a RAMDRIVE (VDISK.SYS in 2.11 land) of
56K
for the creation of drive D: that contains the lookup file.
Now
we are not talking about the fastest computer you have ever
seen
at 4.7 mHz XT speed but it works great! It still takes about
2
seconds for the lookup to display the freq info but that is
about the same time as the delay and because it is another 2

seconds before the lookup is read again it is just enough
time
to read it.

Now, why you ask, would anyone want to use a T1000?
It was free.
It was the first laptop I had ever owned
You can beat the shit out of it and it continues to creep
right
along.
You can leave it plugged into your cigarette lighter socket
for
days with almost no battery drain.
It only needs 9 volts. A cheap CD adapter works fine.
I don't have to bake my Fujitsu Laptop in the sun.
With the afternoon parked car temps reaching 145 degrees in
Tucson Arizona it worth a thought.
and...
IT WAS FREE!

Thought you would enjoy that.
Scott

Their base unit is nearly identical in operation to the Pro-90. It is okay.
I don't like the audio quality, but that can probably be remedied by using a
better external speaker.
RadioShack does have a website, but there is litte info on that scanner.

Stormtracker wrote in message <6nka3f$khf@bgtnsc01.worldnet.att.net>...
>What about their base unit, is that any good ???

Thank you for your comments about the delivery time on your scanner. Normal delivery
time across the 48 states is usually 1 to 8 business days after credit approval.

I know CEI customers are informed where their order is while in transit. CEI Worldwide Logistics
provides UPS with electronic data interchange (EDI) information on your package so complete package
details such as purchase order number and delivery information are electronically exchanged
directly with UPS. Most of this information is available for your use on the Internet. Our clients
worldwide routinely track their packages using UPS's full visibility tracking.

Upon request, CEI always supplies your UPS package tracking number so you can follow
your package through the UPS system by visiting the UPS web site http://www.ups.com.
This web site also has time in transit information. For additional information call 1-800-PICK-UPS.
UPS also has an additional service where, your delivery information can be faxed to you for a small fee.

Usually when someone has a concern of a delay it is because UPS could not get an adult signature upon delivery or you are located in a rural delivery residential area.
This is also called an extended UPS delivery area. If no one is there to sign for your
package, UPS will make two additional delivery attempts, then hold your parcel at your neighborhood UPS warehouse until you contact them. Please E-mail us your package tracking number with your name and address so our staff can do a time movement audit on this package. As a customer service, we routinely audit the performance of our
freight carriers. UPS consistently receives superior performance reviews.

Thank you again for your comments. We are here to serve you.

Mackey your a liar and have been proven one many times over.
Ok here is a very simple deal that you should be able to understand, and
there is no adding of conditions by you allowed.
I know Bill will accept the deal below but will you Mackey ?

As of July 4th you stop posting any off topic messages..
Bill and you go your seperate ways on the newsgroup.
You leave Bill alone and he will do the same.
You do not mention Bill in any of your postings.
You do not use any alias to post to this newsgroup.
You do not send Bill any email.
You do not respond to any off topic postings that way they will stop
also.

Now do you understand this deal Mackey ?
All you have to do is accept and all the flaming will cease!

I also would like to see that claim.

I do imagine however, that an such "threats" are as a result of folks offering customized links from their pages to surreptitiously feed from the AudioNet sites without proper credit.

AudioNet is probably no different from others in preferring you be "on their site" as you monitor the audio feed.

You'll never get an answer from Toilet Boy, George. The Macaroon needs the illusion of superiority to keep his carefully and oh so fragile mental world together. Besides, he likes lying to us and himself. And, don't forget that the only system that he knows how to administrate is a credit card swiper he had mounted in his favorite public bathroom for his personal use.

426. Icom PCR-1000 pros and cons

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: John McDermon <mcdermon@usa.net>
Message-ID: <bw6n1.449$y_.476293@pm01nn>
Source record: 154081

I thought I'd put together a list of the pros and cons as I see them related to the PCR-1000.

On the good side:

1. Radio hardware seems high quality.
2. Icom is a big and usually progressive company.
3. _____

On the down side:

1. The Icom supplied software has several limitations:
- Cannot link bands - limited to scanning 50 ch at a time
- No VFO direct scan up or down.
- No way to lock out frequencies during a search.
- Pour ergonomics when it comes time to SAVE a manually tuned frequency. Requires numerous keystrokes, mouse clicks, and have to write down the freqency and type it back in. Maybe can work around some of this by cut and paste, but its a poorly implemented process.

2 Radio is subject to hardware damage (EEPROM data corrupted) if something goes wrong during the PC to radio communications process. Icom says it is third party software's fault. Yet they refuse to release ANY documentation to allow third party vendors to know if they are doing it "right".

3 For those of us wanting to write our own software (for DOS, Unix, or just for custom requirements), Icom says NO!!!!! If you do and something goes wrong with the radio hardare EEPROM, you'll be held to the same voided warranty situation as if you had done a "hardware modification" to the hardware. This stinks!

Maybe some of you would like to add your own experiences to either the Pro or Con list? I'm out of time at the moment or would go on myself...

Nope, I bought one wondering the same thing, but there are no images to be found. I've also read that same thing since buying it. But it's still a killer scanner for the sale price, IMO.

Just for the record, I have heard images quite well on my unmodified Pro 26 and my Icom IC-W32A (dual band ham radio) with keypad mod for extended rx. The receiver on the Icom is horrible in general as far as out of band stuff, but the Pro 26's receiver seems fairly tight otherwise.

I think you are correct. For instance, on my antique radio site I have
a great deal of info that is not unique, but my presentation of that
info is unique and the presentation is copyrighted. Of course,
original work on my site is also copyrighted.

The pro-64 is a triple conversion scanner. That triple conversion stuff greatly reduces the chance of receiving an image frequency. It's good in that when you receive a signal, you can be pretty sure that the frequency showing on the scanner display is the frequency the signal is being transmitted on, but the down side is that it's more difficult to pick up cell images than you would with a dual conversion scanner.

I believe Brian is correct. I linked directly to their .ram files a while ago from my Scanner Sounds page. I got a polite but firm email from them insisting that I link to their HTML page rather than the sound file itself. The reason they gave was that it violated THEIR contract with Progressive Networks (the RealAudio people). I questioned how the actions of a third party could violate anyone's contract (which they never answered) but modified my links as requested. There has been no problem since then.

BTW, where is the "threat" of a "suit" that was mentioned in the original subject line?

We all have our own needs. For my needs, I'd never consider the lack of images to be a "but". I got mine to use at car races, where I'd enter frequencies and want to hear what was on those frequencies. Triple conversion was a very big plus in choosing the 64.

>One simple question Brad, if your so against why are you adding to it ?

If you re-read the post you responded to, you'll see that I'm not adding to the parts of it that really bug me. Which is mostly the thumping of new people and the attitude that everyone should, "just filter it and shut up."

I'm just trying to present some legitimate reasoning of why it isn't really necessary, why it isn't just one person's fault, and why it makes a lot of peaceful and rational non-computer-techno-geeks go away who might otherwise enjoy the forum. I'm not bitching about off-topic posts, I'm not calling people I don't know fags because I think it's cute (thereby fanning the flames), etc.

I know, it doesn't matter. <sigh> I also realize it's futile.

And if you're talking about the Cap'n Redeye stuff, that was mostly silliness. And finished. I wouldn't really retract any of the underlying content of those several messages, but the tone of voice was just an attempt to match the typical response given to people who bitch about it. Knee jerk reaction. I never said I was above playing the flame game. That seemed to be the only way to get anybody's attention around here.

(Of course, I'm assuming that dmi853@juno.com and dmi853@swbell.com are one in the same person who looked at the cap'n redeye ip and then did something to the effect of nslookup->whois->QRZ->visited my web site->maybe even rang my phone [?] although that coulda been a coincidence)

I'm surprised. It looks like you might be the only vocal person paying any real constant attention to headers around here.

Brad

THAT is my exact point! Bill is found to be a liar as he is
betrayed by his own words!

Here you go again Blake, trying to manipulate words to
further your agenda! No, I was NOT admitting to what
you indicate above as I can't admit to soething I didn't
do. I would be sinking to YOUR usual level & lying!

I accepted them & then asked for additons. Cheek rejected the addition
of "No flaming, nasty messages, or attacks".

NO, I NEVER said that Cheek was a CHILD MOLESTER. Infact, quite to
the contrary! AFTER OBFD@AOL.COM announced the accusation that
BIll Cheek was arrested by San Diego PD for child molestation,
I stated that until PROOF is found that CHeek is a
child molester we should consider it as rumor & ignore. Hell,
I was protecting up for Cheek if I was doing anything!

Until proof is found of Bill Cheek's molesting, we shouldn't
hold it against him.

He's been past the point of learning since birth!!! Must be terrible to
have such an empty head. No logic at all; nothing but circular reasoning.
And he's always right - even when he's totally wrong. And that's ALL the
time...

Some assembly required.
Batteries not included.
Void where prohibited.

To firebuff66@aol.com

Jonathan:

I have some additional information on your package from our time movement study.
Even though you did not supply us your name, address or tracking number, our staff
was able to index to your order based on your E-Mail address of Firebuff66@aol.com.
You faxed your order to us on Friday, June 19, 1998 after UPS picked up for the day.
In fact, you also faxed a second copy to us because you forgot to sign the first fax.
You then followed up with a telephone call. As your order was received after the
daily cut-off time, as promised, your order was ready for pickup the next business
day which was Monday June 22, 1998. Our computer system assigned UPS tracking
number 1Z4151640342345727 to your package. You can track your package by
visiting the UPS web site http://www.ups.com and entering this tracking number.
We also noticed that although we had the correct information on your package, UPS
misrouted your package us to Atlanta. UPS corrected their misroute and your
package arrived in Stratford, Connecticut on Saturday June 27th. Because UPS
does not deliver routine ground packages to residential areas on Saturday, UPS
attempted delivery on Monday June 29th. Unfortunately no one was available at your home
to
sign for your package. On Tuesday June 30, 1998, UPS delivered your package.
I wanted to make sure you are aware that CEI processed your package within our normal
time parameters. It seems unfair to blame CEI for UPS being unable to deliver
your package because no one was home to sign for it or to blame CEI for UPS
misrouting your package when your correct address was affixed to the package.

Jonathan, in addition to contacting FEMA, for additional verification, you might also
want to
check out our registration with the U.S. Department of Defense, Central Contractor
Registration at
http://ccr.edi.disa.mil/ccr/cgi-bin/query.pl. Enter our D-U-N-S number 020893541.
Or if you prefer, call Dun & Bradstreet and order a business information report.

By coincidence, another customer had similar recent concerns about shipping and
handling
fees. I have attached a copy of my E-mail to him as I believe it might answer some of
your questions.

Although you ordered from our web site Jonathan, if you or anyone else have suggestions
on
what you would like to see added or changed, please fill out the survey section at our
web site
or send me an E-mail at cei@mediaone.net.

I am sure you will love your Bearcat scanner. If you have any further questions,
feel free to call me at 1-800-USA-SCAN.

Didn't YOU see the ironclad agreement that I
proposed to Smacksie? It was simple. We
don't talk TO, ABOUT, or even REFER to each
other. Add to that, we don't even THINK
about each other.

Now don't you see that as a near-total solution?
I did. But the hermaphroditic idiot wouldn't
accept it.

Now what does that tell you?

snip
-The point is that, if the stories are true (which is really irrelevant
at
-this point), then your aggressive reaction to Mackey is that of someone
whom
-the average person probably _wouldn't_ like otherwise. Very
reactionary,
-overbearing and annoyingly loud. It's realized that you enjoy the
banter,
-it just gets old and repetitious, and it's a real pain in the ass for
people
-to filter.

> Beaverton - Clark College: 17 miles, estimated drive time: 00:23.

Wrong again! (no surprise)

It takes 23 minutes just to get across Beaverton!

>From my location is about 6 or 7 miles to downtown Beaverton. Then
downtown Beaverton to downtown Portland roughly 10-12 miles. Downtown
Portland to downtown Vancouver approx 11-13 miles. Downtown Vancouver
east to Clark College about 3 or 4 miles. Total estimate, about 30 to
35 miles.

> Quickest route utilizes INTERSTATE 5.

To minimal of an anwer to be correct. Quickest direct route is
Hwy 10 to Hwy 217 to Hwy 26 to I-405 to I-5 to Hwy 14 to Grand Blvd.

> It's called a MAP!

Yea, try reading it sometime!

I've been picking up 451.3 on my Techtoyz minicounter quite a bit, primarily in the downtown area. This is listed as a BellSouth frequency in about 4 cities in Kentucky (Louisville not being one of them). Does anybody know if BellSouth has licensed this frequency to Louisville or is someone else in the Louisville area using it?

PS: Could someone give me the 411 on this Sony Trunktracker I've been hearing about on this newsgroup?

473. Communications Electronics Inc. - A Pleasure

Newsgroup: rec.radio.scanner
Date: 1998-07-03 00:00:00 UTC
From: dconti2@carroll.com
Message-ID: <359c2c29.19075452@news>
Source record: 154128
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I was recently in the market for a Uniden BC 895 XLT, and based on the comments of others here RE: pricing, I first took a look at a company called National Electronics for what was supposedly the lowest price on this scanner.

Shortly thereafter, I found out that Communications Electronics Inc., in Ann Arbor, Michigan, 1-800-USA-SCAN, WWW.USASCAN.COM had an even lower price at the time of $244.00 and change, plus an $18.00 shipping and handling charge for a total price of $263.00 and change. A real good price.

However, I took CEI to task here publicly about what I thought was an excedingly high shipping charge, and was most cordially answered by Ken Ascher of CEI wherein he explained what his company was all about, and the need for the higher charge. Any others here who had the pleasure of reading our dialogue found that Ken was most interesting.

Subsequently, I ordered an 895 on June 30th at the above price, and as MY luck would have it, I find yesterday, courtesy of Rich Wells' excellent site, that national Electronics lowered their price on the 895 to $239.00 plus $8.00 shipping. Needless to say, I was not pleased, and even more unhappy to note that CEI lowered their price on the 895 XLT to $215.00 plus $$18.00 S & H!!!!!

WOW1 $233.00 for an 895 XLT is quite a good deal.

I sent CEI an E-Mail on this matter, and received a PROMPT reply stating that in addition to a 61 day return policy, CEI also has a price protection policy that in my case, allowed them to credit me the difference to the new sale price, less a $10.00 administrative charge. I find the $10.00 charge unusual, and probabaly unnecessary, but charges of this type and the higher S&H charges at CEI are apparently how they defer some of their expenses, allowing rock bottom radio pricing.

I found CEI to be a professional outfit to deal with, and these protections above make them an excellent choice for anyone interested in a radio purchase.

Dan

You make some good points Ryan. As I have told Mackey and just said again (in another post) if he will shut-up and quit insulting everyone (including Bill Cheeks) I will gladly quit insulting and flaming him. I don't speak for anyone else in the NG, but I suspect they would also quit flaming and insulting if John would learn to shut-up.

It's a nice thought, but I doubt it will happen ... Oh well it's nice to dream ...

Hi! Thanks for taking a moment to check out my numerous scanners FOR SALE!
All scanners are in excellent condition! Brief specs. on each are shown:
RS PRO-2020 20 channel desktop/mobile scanner w/priority channel
RS PRO-2021 200 channel desktop/mobile scanner w/priority channel
RS PRO-39 200 channel hand held portable - lots of accessories w/radio
BC 201 16 channel desktop scanner w/priority channel
I want to change my inventory to TRUNK TRACKING units as that's the future for
SAN DIEGO, CA. Please e-mail w/interest and best price for your choice!
Credit cards also ok, as I have a merchant account. Thank you!
Radio911

Very good information Kent. And I seldom run across people who are able
to talk about trunking details with as much clarity as you. HOWEVER, you
have made one incorrect assumption in your post regarding Ericsson EDACS
channel efficiency. With EDACS, as soon as a radio stops transmitting, that
channel is immediately available for reassignment. The system does NOT wait
to finish beeping and drop the repeater transmitter before reusing the
channel
if needed. This is slightly MORE efficient than Motorola's method of
holding
that channel from re-assignment for the duration of the hang time 'just in
case'
that group wants to make another transmission.

Van Goss, WA4ICF

What if.....ol' Smacksie WORKS somewhere near
CLARK COLLEGE? He's made a big ploy about how
far he LIVES from it. But nothing said about
how far away his WORK is from it.....

One wonders if the Phetid Pharie might work there?
Say as a janitor....or....men's room attendant,
or perhaps even in the medical offices? Reliable
sources say Smacksie used to work at a state
looney tunes asylum as a bedpan changer, but didn't
disclose exactly where.

So with "medical" experience, he might well work
in the Clark College dispensary.... or in any
number of other low degree capacities.

In fact, it makes more sense that he might work
at or NEAR Clark since he could stop off for a little
"computer research" on the way TO work and again
on the way FROM work. And his husband would
never know..... And living some distance
from Clark could seem to throw off suspicion....
as Smacksie is so desperate to be doing now.
I mean, that sucker is stepping and fetching
to "prove" he lives so far from it.

Yeah, okay so Smacksie lives a few country miles
from Clark. What if the wretch works there or
near there?

Heh heh heh heh......methinks the enigma is
nearing a solution. <chuckling>

Yah, totally understood. I understand it when it's random people who only seek to cause malicious trouble. You can't put any reasoning or logic to that situation. But these are otherwise normal people (I assume) who migrated their flaming-for-the-sake-of-flaming from fido net. Mackey may have caused it, but Cheeks & friends response is one of territorialism and aggression rather than actually trying to solve any kind of problem, which renders any blame pointless. You guys enjoy it, as you know, that's no secret. There are really only two main things that bother me about it:

1. The way people are treated when they speak out about it. Often these people are new and just now finding their way around. They don't know the history of the situation and don't care. They can't just whip up filtering because they don't know how yet. They may not even use a client that supports filters. And they assume they've come into a neat place of info with other reasonably mature people who share their interest. People can even go way off topic and still maintain a friendly atmosphere. But the "regulars" of the group will snap at anyone new at the drop of a hat just for popping off about what they immediately see as an irrational situation. While you and I understand that it's all deep down intended as fun, the newbie takes offense because s/he is new to the medium and doesn't understand the subtleties or intentions when they can't see the expression on the other person's face. (the reason emoticons came about, etc.) And yes, they are free to go away. But that's a shame. They just didn't get it, and weren't given the chance. And...

2. It's flat out embarrassing to send someone here if you are trying to introduce them to this hobby.

Honestly, I read 10 or more other technical newsgroups (that will remain unmentioned for obvious reasons) where I don't have to even think about this level of filtering. Yes, they all contain their share of flames and nonsensical content, which can often be funny, but they don't generally contain premeditated flame wars from regular posters that go on forever and appear to new people to be the general mood of the group. And I don't find any discussions where anybody feels the need to filter them like I do on the radio newsgroups. It makes sense in groups where the topic itself is hot (religion/politics/kids), but not in a group about scanners. I don't know what it is about radio stuff, but it seems to attract a vocal minority of

people who like to pop off about nothing for no other reason than to stir things up. I'd like to get some people I know involved in amateur radio, but you can't show them packet, or let them listen to a 2m repeater, or show them Usenet groups, because of this kind of nonsense.

Hey, I know it's a free country, I'm not trying to control anything. It just sucks when the people who cause it are smart enough to know that simply doing it somewhere else, or handling it a different way, would greatly reduce friction in general. It's just a shame, that's all.

Nope, I bought one wondering the same thing, but there are no images to be found. I've also read that same thing since buying it. But it's still a killer scanner for the sale price, IMO.

Just for the record, I have heard images quite well on my unmodified Pro 26 and my Icom IC-W32A (dual band ham radio) with keypad mod for extended rx. The receiver on the Icom is horrible in general as far as out of band stuff, but the Pro 26's receiver seems fairly tight otherwise.

I had a Pro-23 that accepted the test mode that produced the 888.960 frequency in channel 15 (I think). It worked just fine until I traded it to a friend of mine for something else. When I attempted to demonstrate the test mode to him, it would not load the test frequencies at all. I tried it several times and it didn't load them. What could possibly have happened to cause this? The unit has never been opened and is in mint condition, purchased new from Radio Shack about two years ago. Please post any replies. Thanks in advance.

The ever clueless "John.Mackey.KA0SSF" <jmackey@parg.org>just keeps going and going and going:

>Anyway, you will notice that I have asked Bill for several truces

Aw, crap, Mackey, will you knock off this "truce" garbage? What you asked for was to be the regulator, censor and judge of everything Cheek and anybody else might write on this newsgroup. Just who appointed you to be a god, and why didn't they pick somebody that had at least half the mental prowess of a 15-year-old?

Why?,

In order to get any sort of logical answer, you would have to define "junk" and
"trash". Some people consider Radio Shack scanners to be "junk and trash".
Others say the same about Bearcat.
What you consider "junk and trash" is most likely not considered the same by
others who subscribe to the same newsgroups.
So, could you maybe be a hair more specific?
Please?,

I just got a 235XLT from CEI. I think their S & H charge is very high at the least. They are adding cost into S & H to make you think the price of the radio is cheaper. It took 11 day's for me to get my 235, for $18 I would expect a little faster but then they did not spend $18 to ship it. I wish they would stop making excuses about their "secured" warehouse and such, and just make the price what it is and the correct S&H. When I was trying to find out where my 235 was I got curt short replies. I really like the prices at CEI but from the letter about the secure warehouse and FEMA coming to inspect I really don't want to do business with them anymore. I would rather do business with an up front dealer who gives a fair price and normal S&H prices or includes it in the price. The $10 they charged you took away any sale price you were getting. Sounds fishy to me.
What did the tell you? Yes we will give you the extra $30 off but we have to charge you $10 to do it. Huh?

Full of crap, but intresting none the less.

What is the company about? Profit. Don't think for a minute that
there was anything different. They can make the claims that people
from FEMA "Inspected" their facility, but so can most any moderate
size two way dealer. It is a sales ploy, and you fell for it.

>WOW1 $233.00 for an 895 XLT is quite a good deal.
>
I still paid 226 for mine, back when they first came out, no
shipping.

>I sent CEI an E-Mail on this matter, and received a PROMPT reply

This is precisely the same scam that Copper Electronics pulled on me. I bought a BC895 and paid about $18 for shipping & their so-called handling. The scanner was shipped by UPS ground which costs them only a few bucks. I won't do business with them any more either. It ain't illegal--it's deceptive and disreputable as you state in your post.

I also had a similar experience as you did when I inquired about the method of shipping and the arrival date. The woman I spoke to danced around and then flat-out lied to get me off the phone.

The only pathetic one is you mackey, the deal I suggested was one of common sense, you did not like it because you wouldn't be allowed to use alias's to cause problems and it did not let you add on any other conditions so you could become the self proclaimed net cop of the newsgroup.

All you do is make excuses for not making a deal and then you try to blame it on Bill, the problem with that is the people on the newsgroup realize your the one not accepting the deal.

That was not a simple condition mackey , your trying to impose your will on Bill and are wanting to control him , well that is not going to happen .
And don't fire back with everyone else is trying to impose their will on you because they are not.
All that is being done is trying to get a truce in place a simple straight forward truce with basic and logical conditions , but you don't want that , you have to complicate the deal with your self serving conditions.

Hi Paul,
I'm Andy Ferguson and I am a distributor of the Midland Weather lert
Radio with alert. It tunes into your local weather tower and when
N.O.A.A. or the NWS sends out a local warning, it sounds a loud siren
that WILL wake you up. You can then get the report. Or you can get a
24 hour weather report. It operates on a 120Vcurrent(just plugs into
the wall) and also houses a 9V battery that automatically kicks in in
case of power outage to serve as a backup. If you would lkke more info
on the radio, or becoming a distributor, please e-mail me. I will be
happy to help in any way. By the way, I am writing this in response to
your deja news posting. Thanks, alferg

So what your saying mackey the charges against Bill below are true!
Where is your proof of this that makes your statements true, when are
you going to show any factual proof instead of your innuendo's ?
The reason you can't is due to the fact you and nick concocted the whole
story to ruin Bill's reputation, but it backfired on you because
everyone knows about your personal vendetta against Bill.
Also mackey you wouldn't know the truth of it bit you.

I have a Bearcat BC200XLT for sale. It has 12 band coverage, including
full 800 Mhz. This scanner is a handheld model with 200 channels.
Comes with rechargeable battery pack, AC adapter/charger, rubber ducky
antenna, and instruction manual.
I am also including a leather case for it.
$200 takes it.
If interested, please email jerw@usa.net or call 818-882-0101 between
6-10 PM PST.
I am located near Los Angeles, CA.
Thank you.

Yes, I realize. And that's why I'll be going away after this post. Lord,
who's got time?!

>> And they assume they've come into a neat place of info
>> with other reasonably mature people who share their interest.
>
>Then they assumed an awful lot Brad. They may have assumed that an
unmoderated
>NG was a neat (as in "structured"?) place of info, populated with warm,
smiling
>denizens; but they learned different real quick, didn't they Brad?

No, I didn't mean neat in the structured sense. I meant neat in a "cool"
sense. People who are brand new to the medium generally think this kind of
availability of info is cool and use either of those two words often,
depending on age.

>You run away from a Bear.
>You run away from a Train.
>If you run away from words on a computer screen; you're a frail creature
indeed.

Well, they don't get the chance to form an opinion one way or the other.
They aren't running from anything in fear or because they've been offended.
They are leaving what they see as a very child-like, or at least, a very
irrational and volatile situation. A large part of the business I'm in has
me hearing from a lot of very new people to the Internet, and usually new to
computers in general. The bulk of the people who are here now (like you and
me), have already dealt with this for a long time, and dealt with things
like CB and ham radio, and other similar things where you must learn to
listen to a lot of people who are very outspoken, and it's very old hat to
us. From your description, I honestly don't think you see the average new
business person coming into this sort of thing. This looks _very
ridiculous_ to them and it chases them off. They're not largely here to
spend a lot of time making new online friends and enemies. They believe
they've found an info source and people who want to casually discuss those
things. They're not always wrong. I'm tellin' ya, the radio groups read
more like political/religious groups than they do technical groups.
Bizarre.

>So you have more sympathy for those wretched souls than I. Maybe someone
will
>provide them the moderated care they deserve. A defender. Someone they
can
>look up to. Someone who will purge anything the flock might find
distasteful.
>I ain't doing it. Do you have the time to do it Brad? Do you really want
to?

I get paid to provide them sympathy :) And I see it on a daily basis. I don't provide them moderation, I provide them alternatives and explanations, and try to explain the evolution of what they're seeing. We experienced it as it forming. They are trying to jump in to an already existing chaos. And again, they don't run in fear or anger. They just go away. Sometimes in mocking laughter. You have to remember that the people involved in long running flame wars are techno geeks that were already prone to be in the medium from early stages, myself included. The vast majority will likely not become that same thing from what I'm seeing, or if you look at other models of human interactivity.

>> 2. It's flat out embarrassing to send someone here if you are trying to
>> introduce them to this hobby.
>
>You perceive it as embarrassing. Other's you send here may not perceive it
that
>way.

I can guarantee they do, I hear it. It is the rare new person I find that likes, or is willing to take time to deal with such things. Not to be degrading, but really young people are the most likely new candidates to like this sort of constant flaming. It's great for them because they are generally fascinated by ways of flexing their right to free speech and their opinions (loudly).

>They may even see you participating in the off-topic banter and still not
>perceive it that
>way. C'mon Brad, you obviously learned the ropes, and I think that'll
you'll
>find most
>people will learn it too.

Sure, and I and lot of others here started on the Internet long before the current level of flaming was happening. Honestly, Usenet regulars saw and discussed the stuff floating around local BBS's, fido net, freenets, et al, and knew what was going to happen as the Internet started commercializing beyond the freenets.

>You gotta give 'em credit to learn as you did. You
>have to
>acknowledge that it's possible. To believe otherwise would indicate that
you're
>holding
>yourself out to be superior.

Not at all. It actually holds _them_ to be unfairly superior. Again, the new people of whom I speak go away not out of fear or anxiety or being offended. They go away because they see it as beneath their time. They see the "freaks in the chatrooms" they have been hearing about for several years on talk shows and the news. They laugh at it. They don't see it as worthy of their time. They think it's stupid and wasteful. I'm not trying to claim to know every demographic. And I'm not even saying you should care what they think. And certainly not 100% of anything is absolute. But I do feel I regularly consult with enough people who are new to know what the general feeling is.

>Well, whaddya gonna do? Are you going to start a Crusade in unmoderatedville?
>Are you going to work around it with filters? Are you going to just work >through it and not let those big 'ole bad words hurt you?

No sir. I'm going back into lurk mode, and unfortunately I have to filter a lot of you out to keep the filtering working very well (a shame MS Outlook Express doesn't provide msg body filtering). And like the new people I'm talking about, it's not because I'm offended, it's because it takes a lot of time and gets nothing done. That's what pissed me off in the first place. When I started realizing through people's quoting that I was occasionally missing good stuff from some of you who also participate in the avoidable mess (I will stick to the fact that it is mostly avoidable in this situation), I decided to turn off the filtering and join the fray. It was a slow holiday type of week. I can't really justify the time and I don't really care about it quite to the level that it may seem given my amount of whining on the topic (and it does look like whining as I reread over some of it).

I'll go away now. I honestly figured you'd all end up twit-listing me eventually. You were the first to give me an honest shot at expressing an alternative viewpoint without flames, and I really do appreciate that. (meaning alternative relative to y'alls "filter it and shutup" view :)

I almost feel bad about the Cap'n Redeye stuff now. <sniff, sniff> ... NOT!

Good luck....

Brad

The best freq guide is easily Scanner Master for Massachusetts. Its almost
700 pages; sells for about $35. They have a web site www.scannermaster.com.
Don't overlook the many web sites with freq info for Mass such as
http://www.li.net/~j4dice/frequencies/Massachusetts/index.html and
http://www.capecod.net/~tcaldwel/fleetids.htm (trunk tracking info).

Van,

The city management where I live do NOT want the public to listen in on city radio traffic. They had their radio tech. program the system computer to transmit anti-scanner burst of RF. How does your city management feel of the public listening in on city traffic?

I herd that Harris County was going to get an Ericsson EDACS. Well I'm glad for all you scanner listeners down there they went to Motorola. Up here in Midland they went to EDACS. They also were trying to sucker Odessa into an EDACS, but Odessa went with Motorola. They had the EDACS system radio tech. program the system computer to transmit anti-scanner burst of RF. If there is ever a disaster here, how is the public who have scanners going to be informed.

I know I said I'd go away, and I am. But I sit here and read this one and I really think it illustrates the point I'm trying to make. This is not the "bad-guy" Mackey, this is the "good-guy" Cheek. "He" is probably the bigger problem here. You can't reason with him any more than Mackey. Even the most simple-minded of psychologists could tell you this. It basic stuff. I've emailed and posted with some nice people who take this situation very seriously and have expressed that they once felt like I did, but reading the history of Mackey turned them. To you I say that yes, I understand that Mackey would be fucking with someone else if it weren't Cheek. But please realize that Bill would be doing this too. Cheek is arrogant, antagonistic, etc, etc, etc. Not just to Mackey, to anyone who questions him. I have to think you support this because you think it's fun and in no way want it to stop. I can understand that. But why won't anyone say it like it is?

To someone who was trying to be reasonable, he said...

>You're new here, right? And you have all
>the answers?

Territorialist, and antagonistic. If there is, in fact, a problem, and you want the problem to go away, you must realize he is as big as part of the problem as the other person. It's not rocket science. Yes it's just an opinion but it's based upon years and years of stuff that simple science and observation are made of.

This really does kind of boil down to a territorial thing. You guys say that it's a free speech thing and nobody owns this space. Well I see a fairly well organized group of people who thump anybody new who comes in here and questions things. That looks like an attempt at ownership and censorship to me. It really is a struggle for control led by the cry that nobody controls it.

Heehaw, I really do have better shit to be doing. I swear :) Later...

bam

560. APCO Project 25 Specs

Newsgroup: rec.radio.scanner
Date: 1998-07-04 00:00:00 UTC
From: jpryor@my-dejanews.com
Message-ID: <6nm4ti$kt6$1@nnrp1.dejanews.com>
Source record: 153947

SPECS OF APCO 25

6.25 kHz Bandwidth (CQPSK) Modulation

The CQPSK modulator consists of a table look-up, the two outputs of which (I and Q) are Nyquist filtered and then amplitude modulated, in phase and quadrature phase, before summing. The information bits are processed by the look-up table to yield a 5-level I signal and a 5-level Q signal. The I and Q signals are filtered with the Nyquist Raised Cosine Filter previously described. The I signal is then multiplied by the carrier and the Q signal is multiplied by the carrier after it has been delayed by 90 degrees. The modulated I and Q carriers are then summed together to yield the modulator output.

12.5kHz Bandwidth (C4FM) Modulation

The C4FM modulator consists of a Nyquist Raised Cosine Filter, cascaded with a shaping filter, cascaded with a frequency modulator.

Addressing

A very large number of radio addresses are provided, both for individual radios and talk-groups.

Aggregate Bit Rate

The aggregate bit rate is 9600 bits/s. In the case of data transmission, data packets basically consist of a header, containing overhead information, followed by data. In the case of digitized voice transmission, after the transmission of a header containing error protected overhead information, 2400 bits/s is devoted to periodically repeating the overhead information needed to allow for late entry (or the missed reception of the header).

C4FM Frequency Modulator

The deviation is +1.8 kHz for dibit 01, +0.6 kHz for dibit 00, -0.6 kHz for dibit 10, and -1.8 kHz for dibit 11.

C4FM Nyquist Filter

The dibits of information (i.e., 4800 symbols) are filtered with a raised cosine filter which satisfies the Nyquist criterion minimizing inter-symbol interference. The group delay of the filter is flat over the pass-band for $|f| < 2880$ Hz. The magnitude response of the filter is approximately 1 for $|f| < 1920$ Hz, $0.5 + 0.5 \cos(2(f/1920)$ for $1920 \text{ Hz} < |f| < 2880$ Hz, and 0 for $|f| > 2880$ Hz.

C4FM Shaping Filter

The shaping filter has a flat group delay over the band-pass for |f| < 2880 Hz. The magnitude response of the filter for |f| < 2880 Hz is sin(pif/4800)/(pif/4800).

Data Packet Data Blocks

Confirmed Data Blocks contain a 7-bit serial number (to allow for selective transmission), 9 bits of error detection on the entire block, and 14 octets of data. Unconfirmed Data Blocks contain 12 octets of data (note: a 32-bit error detection code is appended to the end of all data packets).

Data Packet Error Correction

Header Blocks normally use a rate 1/2 trellis coder for error correction. Unconfirmed data packets normally use a rate 1/2 trellis coder, while confirmed data packets normally use a rate 3/4 trellis coder. Interleaving is applied over Data Blocks.

Data Packet Header

The Header Block used for communications between a radio and a packet data node (i.e., switch) contains 10 octets of address and control information, followed by 2 octets of error detection coding. Information contained in the header includes: the identity of the Service Access Point to which the data is being directed, a manufacturers identification (to allow for non-standard functions), a logical link identifier to identify the sending radio of an inbound packet to a node and the receiving radio of a packet outbound from a node, the number of blocks to follow in the packet, the number of pad octets to fill out the last block, the sequence number of the packet, and the Fragment sequence number. For packet data communications directly between two radios, essentially two 12-octet Header Blocks are used at the beginning of each packet in order to convey the necessary address and control information. The header is preceded by 48 bits of synchronization and 64 bits of network identifier (to prevent confusion between radios in different networks).

Data Packet Structure

Data messages are divided into Fragments of less than 512 octets. Fragments are, in turn, divided into Blocks of M octets, where M=12 for unconfirmed messages and M=16 for confirmed messages (except Header Blocks are 12 octets in length). Note: a Fragment, preceded by header information, is defined as a Data Packet.

Demodulator

The demodulator is capable of receiving both the C4FM and the CQPSK signals. It consists of a frequency modulation detector, followed by an Integrate and Dump Filter and then a stochastic gradient clock recovery device. The Integrate and Dump Filter has a flat group delay over the band-pass for |f| < 2880 Hz. The magnitude response of the Integrate and Dump Filter, for |f| < 2880 Hz, is approximately sin (pif/4800)/(pif/4800).

Digitized Voice Coder Method

After evaluating several candidates, APCO 25 selected IMBE (Improved MultiBand Excitation) vocoder, operating at 4400 bits/s. An additional 2800 bits/s of forward error correction is added, for error correction of the digitized voice. IMBE has also been selected by INMARSAT, for use in digital voice maritime satellite communications.

Digitized Voice Frame Structure

The Header Word, transmitted at the start of every transmission, contains 120 bits of information and 528 bits of error correction. Voice Frames are 180 ms in length and pairs of Voice frames compose a 360 ms Superframe. The first of a pair of voice frames transmits, in addition to digitized voice and its error corrective coding, 72 bits of link control information, 168 bits of error corrective coding on the link control information, and 16 bits of embedded low-speed data signaling with 16 bits of error corrective coding. The second of the pair of voice frames transmits an additional 16 bits of low-speed data signaling with 16 bits of error corrective coding, 96 bits of encipherment information, and 144 bits of error protective coding on the encipherment information.

Digitized Voice Header Word

The header is preceded by 48 bits of synchronization signal and a 64-bit network identifier (to prevent confusion between radios in different networks). The 120 bits of information in the Header Word consists of 72 bits for the encipherment initialization vector, 8 bits for a manufacturer identifier, 8 bits to identify the encipherment algorithm, 16 bits to identify which encipherment key variable is being employed (in systems with multiple encipherment key variables), and 16 bits for the talkgroup address. Including error corrective coding, status symbols (22 bits) not described in this brief contribution, and preceding signaling, the header requires 82.5 ms for transmission.

Digitized Voice Encryption Information

The 96 bits of encipherment information consist of the three encipherment-related fields in the header: the 72-bit encipherment initialization vector, the 8-bit encipherment algorithm identifier, and the 16-bit encipherment key variable identifier. The encipherment information is protected by 144 bits of error corrective coding. Note: the encipherment process does not change during a transmission. The repeating of this information every 360 ms is primarily for late-entry by receiving radios.

Digitized Voice Link Control Information

As previously stated, 72 bits of link control information is contained in the first of each pair of Voice Frames. If the addressee is a talk-group, the link control information consists of 1 octet describing the type of information (e.g., talk-group type of transmission), 1 octet containing the manufacturer identifier, 1 bit indicating whether or not the transmission is of an emergency nature, 15 bits reserved for future use, 2 octets for the talk-group address, and 3 octets for the transmitting radio's identifier. If the addressee is another radio, the last 7 of the 9 octets consist of : 1 octet reserved for future use, 3 octets for the destination radio's

identifier, and 3 octets for the transmitting radio's identifier. This information is protected with 168 bits of error corrective coding.

Encryption

Information required for decoding to take place (including the encoding initialization vector) is transmitted at the beginning of all transmissions, and is embedded in the signaling overhead throughout all digitized voice transmissions. This allows for the use of multiple encoding algorithms and "key variables". An adequate number of bits have been assigned to allow for even the highest (i.e., most secure) levels of encoding.

Error Protection

To provide for the maximum possible coverage (i.e., range of operation), a high degree of forward error correction and interleaving has been provided for. The mobile environment is subject to severe Rayleigh fading and the APCO 25 techniques have been designed to operate in bit error rate environments of up to 7 percent.

Flexible Modulation Method

A pair of modulation methods have been selected that utilize a common receiver. The first, which utilizes a constant-envelope 4-level Frequency Modulation (FM) variant, can utilize simple, high-efficiency amplifiers and has emissions that fit within a 12.5 kHz bandwidth. This method will be fielded in most equipment initially. The second, which utilizes a CQPSK variant with amplitude components, requires the use of highly linear or linearized amplifiers and has emissions that fit within a 6.25 kHz bandwidth. (The receiver, common to both, has a 6.25 kHz bandwidth.)

Low-Speed Data With Digitized Voice

An 88.9 bit/s low-speed data channel is provided in the digitized voice frame structure. No application is currently defined. One application under discussion is to use the low-speed data channel for the transmission of accurate geographic location information.

Talk-Group Operation Unlike normal telephone operation, all members of a talkgroup can receive the transmissions of all other members of that talk-group. Members of a talk-group do not have to receive the beginning of a digitized voice transmission (i.e., late entry is provided for).

John, there you go again ... can't you accept anything someone else write without adding to it ?????????? Just like the proposals from Bill you said you accepted (??) you are trying to change this one also. Just take the offer and run with it. Maybe your life would calm down some and you could quit taking your high blood pressure medication.

But, we all know, you will NOT accept this proposal as written either. You must like this punishment and want the flaming and bitching to continue. I am beginning to think you are either very stupid or very bored with your life.

So, what'll it be ???? Are you going to accept this offer ????

We are waiting !!!!!!!!!!

Mike

Sounds like a reasonalbe offer to me. Watch Mackey won't be able to accept it without making his anti-flame changes. If he would just read this offer closely he would realize that not communicating with each other would mean no flames. But, alas, me thinks he is to stupid to realize this.

John ... we are waiting ... what are you going to do ??????????????????

Mike

P.S. We already know the answer, so it'll come as no suprise.

My 2 cents for what it's worth. . .

I purchased a BC 235XLT from CEI recently. The price was right and the service was great. I wouldn't want to pay 18 bucks for shipping. Luckily, I live near Ann Arbor and just picked it up from CEI's "Emergency Operations Center". Of course, I did have to pay sales tax but that's not CEI's fault. I first met Ken through our local ARES/RACES organization. I can't say I know him real well but he seems like a good guy.

>I will be traveling to Kansas City M.O. on Monday and need the freqs
>for CROWN CENTER AND THE WESTIN HOTEL. The primary police / fire and
>EMS freqs would be nice to, but I should be able to get these on my
>own.

KC MO runs an 800 MHz trunking system. I live out in a suburb and I have so much trouble getting ANYTHING on their crappy system that I've given up in frustration. I noticed that some fire department operations have gone back to their 450 MHz channels, along with MAST ambulance. For Crown Center and Westin, I haven't a clue. When I worked briefly at the Hyatt across from Crown Center, it seems they were all using a 154 MHz frequency. Some places have gone to 800 MHz, which to me seems like a real waste if you're using only one channel.

John Habbinga (habbinga@wt.net) wrote:
: I certainly wouldn't classify the Pro-91 as a piece of junk as compared to
: the Pro-90. In fact it happens to be superior to the Pro-90 in several ways.
: The ONLY complaint that I have about the Pro-91 is that it has a higher
: "white noise level" (at least that's what I call it) as compared to the
: Pro-90. I understand that there is a modification that can improve the
: audio performance of the Pro-91. If anyone can tell me about it, then please
: do.

Well, it has half the channels of the pro-90, the freqs programmed into
service-search are supposedly rather questionable, the receiver performance
(according to reviews I've seen) is not as good as that of the pro-90...
If they were selling it for a fraction of the pro-90's price, it might
make some sense... but... It's certainly *not* a step up from the
pro-90, IMHO. Out of curiosity, how is it superior? You might consider
posting a review - no review that I have read has given me any reason to
believe that the 91 might be superior in any way...

As for mod'ing the pro-91... you should be able to take out the hiss by
putting an electrolytic cap across the speaker. Check deja-news, I think
someone recently posted that he'd done so, and mentioned what value worked
best for him --- check some of Parnass' repair-tips FAQs too...

You are only missing one thing Bill!
Add this & you have a DEAL!!
6. Neither will post any flames, attacks, or Nasty messages.

Notice Bill, I have DROPPED the part about newsgroup posts
resulting in profit. You disliked that part stating it
was not acceptable & interfered with your business, so I
won't pursue it in an effort to want to make this work.

Now with the profit thing out of the way, you have NO
REASON to refuse the agreement, unless you want to
keep somekind of a loophole so you can flame & cause
more trouble.

Bill, let's make this work!

It makes NO difference what I do or anyone else does, Mackeyloon. The only thing you have to be concerne4d about is what YOU do. If you truly want it to stop, all you have to do is STOP. Period. And I bet if YOU stopped, virtually ALL of the crap would hust go away. Try it. I dare you. But you've proven frequently that you do NOT want it to stop. Whenever the number of off-topic flames drops, YOU get active again and raise the number all over again.

You have no control over anyone but yourself. No control over Bill Cheek. No control over Mackaroon. No control over MAlexander. No control over George. Only over yourself. Try controlling YOU for a change. STOP!

I requested ONE SIMPLE addition to your 5 conditions
but that was to much for you. That ONE SIMPLE
condition was:

"Post no flames, attacks, or nasty messages."

Unfortunately, you are unable to abide by the addition
so you will not make the agreement.

Earlier you stated that you couldn't make the agreement
because it prevented you from doing business transactions
on the internet. Certainly, the above addition I proposed
couldn't do that.

Bill Cheek, you are pathetic!

Excellent condition, full cell coverage as well as the 50-80mhz mod
(Diode moved from 4 to 3).
You should know all about this radio.....
No AC adapter (7.99 @ RS) but will include car adapter.

$250 shipped to 48 states.

PS.- I will be traveling from 7/5-7/14, I will check e-mail but cannot
transact until 7/14 the
earliest.

Paul

Right. You may not impose ANY extraneous,
superfluous, inane conditions. You may not
"fix" it so's I can't respond to other
idiots when they attack me first, like your
OBFD and REALLYBIGGUY aka's.

All you and I can legitimately agree to
is the following contract:

1. You and I don't communicate TO each other.
2. You and I don't communicate ABOUT each other.
3. You and I don't REFER TO each other.
4. You and I don't THINK about each other.
5. Period. No if's, and's, or's or but's.....

Now what is so wrong with this contract?
Explain, please? Nothing else can possibly
be pertinent.

I am anxiously awaiting reports on the performance of this little radio from new users. I am specifically interested in scan speed and its performance in the military air band.

I would appreciate any and all comments.

73,
Ed

In keeping with the growing desire to stop
all hostilities betwixt thee and me, the
following contract is hereby offered:

1. You and I don't communicate TO each other.
2. You and I don't communicate ABOUT each other.
3. You and I don't REFER TO each other.
4. You and I don't THINK about each other.
5. Period. No if's, and's, or's or but's.....

There is no expiration and no revocation. It
is to exist in perpetuity.

To set it into effect, you need only reply to
this post, quoting it in its entirety, and
add your own words: "I AGREE." without the
quote marks. Nothing more. Nothing less.

At which point, I won't even reply, because
my end of the bargain will at that instant
be in force. And I guarantee at that instant
you will utterly vanish before my five senses
and cognitive powers.....never to resurrect
unless and until you break the contract....

Signed and sealed......

I am not going to subject myself to your warped
interpretations of a complicated contract. This
might be getting somewhere, though.....

> With this, we could defend ourselves against attacks
> on a specific topic, but could not attack on a different topic.

The ONLY problem there is your connotation of "we".
There is no "we". And never will be. I stand on
my own two feet in my own two shoes without ANY
relationship to the space in which you exist.

Anyway, I have committed time and time again to
everyone on the newsgroup that I will never be
the first to attack and flame. You and I do
NOT need any sort of a rider to that effect in
the contract. It's strictly thee and me. How
I might interact with others has nothing to do
with you. Vice versa.

You negotiate whatever contracts with others
that you want. And I will do the same. But
between thee and me, here it is and it doesn't
get ANY better:

1. You and I don't communicate TO each other.
2. You and I don't communicate ABOUT each other.
3. You and I don't REFER TO each other.
4. You and I don't THINK about each other.
5. Period. No if's, and's, or's or but's.....

That's it, Smacks. Neither you nor I are here to
be anyone else's salvation. We're not going to
"save the newsgroup". We're not going to liberate
Cuba. We're not going to do anything because there
is no "we". You and I will simply cease to exist
to each other. Simple as that.

> > Which
> > means he could then go incognito and come back
> > at me from another AKA and I wouldn't be able to
> > return fire.

> You or I or anyone else could do that anyway so what difference does
> that make?

A lot. I don't do aka's. You have dozens.

It doesn't matter in another sense, though.
I just won't be a party to anything that
adds more liberty and credibility to your
aka's. Just thee and me, Smacksie. Period.

Now see my NEW message with the subject line:

To John Mackey

> Add this & you have a DEAL!!

> 6. Neither will post any flames, attacks, or Nasty messages.

That has already been discussed and the first five
stipulations cover it between thee and me anyway.
You will not bind me in my interactions with others.
Nor will I bind you. You make your own contracts
with others....as will I.

> Notice Bill, I have DROPPED the part about newsgroup posts
> resulting in profit. You disliked that part stating it
> was not acceptable & interfered with your business, so I
> won't pursue it in an effort to want to make this work.

I said nothing of the sort. It's a fact
that I AM in business and it would be easy
to construe my mere presence as "commercial"
or however you put it. Besides, that had
nothing to do with thee and me.

> Now with the profit thing out of the way, you have NO
> REASON to refuse the agreement, unless you want to
> keep somekind of a loophole so you can flame & cause
> more trouble.
>
> Bill, let's make this work!

Then ACCEPT the contract I offered in the
new message, subject of: To John Mackey

It's just betwixt thee and me with no
superfluous bullshit. I have already
made the committment to the newsgroup-at-large
that I will never be the first to attack
and flame. That is good enough, and doesn't
relate to thee and me anyway.

Read and accept the contract proposed in
my new message, subject: To John Mackey

> these flames and constant off topic posts. ......

Me, too. But it simply wasn't avoidable.
Not without a godawful hefty price that I
wasn't willing to pay.

Never mind that right now.

It's easy for you to sit over there in the
comfort of your radio or computer room and
lay all that on me. So I will challenge you
to step over to the other side of the fence
for a minute before judging me any further.

Do this. Write a couple or three books.
Do a goood job so they're successful. Do the
first two for the equivalent of less than a
week's wages each WITHOUT ROYALTIES or
subsequent remuneration !!!

Then stick yourself out in the public to
support and back up your work and help those
who need a little prodding and clarification.

Make yourself the target of every scuzzball,
lowlife, and stalker that can't crawl out of their
own toilets. Do that for seven or eight years.

Then come back and tell me one more time
just what you NOW said.....and mean it.

But, if you can't or don't want to do that,
and seriously, I'd understand, there is one other
FAIR thing you could do. It's a lot easier.

Just take a look around you. Count heads.
Count the heads of those who wrote a few
books and countless magazine articles, and
then put themselves up on the public chopping
block for seven or eight years....or longer.

Let me count for you. Save you the trouble.
You'll get to one finger. Maybe ... just
maybe TWO, if you alter the selection criteria
a little. We'll argue more than TWO, if you
think you can find that MANY. But go ahead
and count!

Lastly, take a count of those like me who DID
give it a shot....but then tucked their tails
between their legs and ran like scared rabbits
back to their inner sanctums.

You'll use up fingers of both hands and toes
of both feet and other appendages and then be
looking for more counters to keep track of
those who tried it and quit.

Question.

Do you STILL think I should placidly sit
here in your kangaroo judgment?

Question mark. The favor of a public
reply will be immensely appreciated.

It hasn't, though. And I ignored him
for weeks at a time. Months in one period.

But it isn't just HIM. He's the one with
the most longevity, but he studied under
Petey J. Boe and Glennie Queenstrom and others
whose names I'll not mention.

You don't understand the Usenet. It's
not like out there in real life where if
you cost someone time and money, they'll
eventually go away. Maybe in some cases
here.....but not in most.

You're new here, right? And you have all
the answers?

You can't change the way other people post dirtbag. He's offering to wipe you from his future posts, if you do the same.

Your *one* condition is tantamount to preventing Bill from posting anything short of "sugar and spice."

Your *one* condition is unreasonable.

He's gonna post whatever he feels is appropriate. Such is the nature of the USENET.

The only question is: Are those posts going to include you? You'll decide that one.

Those terms don't look half bad; what's your problem?

Now to address your LIE!

No Bill, I have NEVER done false ID's (aka's). OTOH,
YOU, BILL CHEEK, have been caught RED HANDED using fake ID's
many times! "WinRadio sales" & "Billy Thunder" are two examples.

Your lying is WHY I am insisting that proper assurances be
built into any kind of agreement we make, to make it "air-tight".

> ,,156.1500,,D,, 156.1500 Tucson Police Department - Various
> Useage

Most of those frequencies are bogus. The first six are used, but not in that order. The rest have changed. Tucson PD uses 10 repeaters and one simplex, since a repgramming in early 1997. Most of the simplexes you list are now inputs to newer repeaters. Detectives don't use radios for themselves. They communicate with patrol units on Ch1-4, but all their own comm is by cellphone.

> ,,155.6700,,D,, 155.6700 University of Arizona Security

This frequency was UofA Police in the eighties. It since been abandoned. UofA Police use a 3-ch UHF repeater system since the early nineties. UofA Building Security folks are on it as well.

> ,,156.0900,,D,, Department Of Public Safety

That's the Department of Corrections "Chase" channel. DPS doesn't use it.<snip> Too many errors to list here.

> ,,154.3850,,D,, 154.3850 Tucson Fire Department

Tucson FD does not use this frequency, and never has, It is licensed to Rural/Metro FD, but they never used it because it interfered with their

repeater on 154.370 when they tried.

> ,,453.1000,,D,, 458.1000 Tucson Fire Department - Channel 1

> Fireground/Simpl
> ,,453.3250,,D,, 453.3250 Tucson Fire Department - Channel 6
> Fireground/Simpl
> ,,453.7500,,D,, 453.7500 Tucson Fire Department - Channel 7
> Fireground/Simpl
> ,,453.8000,,D,, 453.8000 Tucson Fire Department - Channel 8
> Fireground/Simpl
> ,,460.5750,,D,, 465.5750 Tucson Fire Department - Channel 9
> Voice & MDT

Those Ch #'s are about ten years old. The MDT's are on 800 MHz. They don't use 154.400, 154.280 or any other VHF frequencies except as noted below.

> ,,154.1900,,D,, 154.1900 Tucson Fire Department - Local
> ,,154.1300,,D,, 154.1300 Tucson Fire Department - Local

154.190 is a data frequency for the FD's Automated Vehicle Location system (or AVL).

> ,,155.4000,,D,, 155.4000 University of Arizona - Ambulance
> Service

UofA has no ambulance service and never has. 155.400 is the University Medical Center security personnel.

<snip> Too many errors to begin to correct in the federal part.

Take a look at http://www.azstarnet.com/~danr for information on obtaining accurate frequency information for Tucson, Arizona.

Hi Mike,
Thanks for the compliments! Much appreciated. Hopefully, with a
little more time, I can get some more feedback on HF monitoring
with this rig. I wanted to get something out quick for all those
who wrote me wanting to know more about this radio. I'm sure I'll
also continue to keep hearing from those new 8200 users and be
able to share all the comments for everyone else who is interested
in getting this radio.

Sure is. Looking forward to the slot cards and interface cables.
Have some queries out to see when they'll be available. Hopefully
we'll hear soon!

Enjoy your 8200! Happy monitoring all!

> ,,453.3250,,D,, 453.3250 Tucson Fire Department - Channel 6
> Fireground/Simpl
> ,,453.7500,,D,, 453.7500 Tucson Fire Department - Channel 7
> Fireground/Simpl
> ,,453.8000,,D,, 453.8000 Tucson Fire Department - Channel 8
> Fireground/Simpl
> ,,460.5750,,D,, 465.5750 Tucson Fire Department - Channel 9
> Voice & MDT

Those Ch #'s are about ten years old. The MDT's are on 800 MHz.
They
don't use 154.400, 154.280 or any other VHF frequencies except
as noted
below.

> ,,154.1900,,D,, 154.1900 Tucson Fire Department - Local
> ,,154.1300,,D,, 154.1300 Tucson Fire Department - Local

154.190 is a data frequency for the FD's Automated Vehicle
Location
system (or AVL).

> ,,155.4000,,D,, 155.4000 University of Arizona - Ambulance
> Service

UofA has no ambulance service and never has. 155.400 is the
University
Medical Center security personnel.

<snip> Too many errors to begin to correct in the federal part.

Take a look at http://www.azstarnet.com/~danr for information on

obtaining accurate frequency information for Tucson, Arizona.

Yes, try Ed Walsh (KC0CKK - I've talked with him on 2m, very nice guy) at
http://home.att.net/~emw-1/mmp.html.

Very good page with a lot of frequencies for major agencies.

These are nationwide mutual aid frequencies.

There are others in 400MHz and 800MHz but I
don't my reference book handy right now.

A surprising amount of fire control is being done out of the Jacksonville Forestry Site listed as belonging to "Marietta" (West Jacksonville). Co-ordination with both ground(?) and air units is being done on 159.240. They work with Lake City, in the Suwanee district

159.450 is being used for Bunnell (Flagler) comms

133.075 is being heavily used Air-to-Air by roto-wing units (helicopters)
118.225 is reserved for fixed-wing A/C
124.275 is being heard, as is 123.45 and 123.075
127.275 I think was mentioned for Suwanee

169.175 was supposed to be used for air-to-ground. Believe this is federal forestry.

My receiving range extends easily down into Putnam and St. Johns counties, and I'm surprised that it's almost business as usual on the standard fire frequencies, nor have I noted anything on the intersystem police freqs. Ditto for all the more obvious disaster freqs.

If anyone knows what freqs. are being used to co-ordinate all these different fire departments, I'd like to know.

You can get some good pictures from space and other info from http://www.wjxt.com/firestorm.htm

Newsgroups: rec.radio.scanner,alt.radio.scanner

Yo Smacksie? Hey wimp-gimp, you there?
Sure you are. You don't miss a post anymore.

Yes, that's good. Now sit down and read.
You are out of choices. You had innumerable
chances and peed them all away, like a
prepubescent juvenile that can't hold his water.

Now you are without choices. Here's the
deal. First, you need to know that I have
been testing my Twit Filter on you and all
your aka's, forgeries, and e-mail bombs for
the last few months. It's ironclad now.
You're fixing to lose. Big time.

You're going back on my Twit List to stay
for an indeterminate period of time, maybe
even forever. In that interim, I am going to
honor the contract I laid on you consistent
with the following:

1. I will not communicate to you.
2. I will not communicate about you.
3. I will not make references to or
insinuations about you.
4. I will not think about you or even
recognize your existence. (You are
about to wink OUT of existence.)

You poor sap.

Yup, it's a one-way contract...you are free
to continue your attacks, flames, and nasty
posts. There is no deal that binds you. Oh,
how good you got it, eh shitbird? ........

Except that you're fixing to disappear, Hermie,
and there ain't a thing you can do about it.
It's "lights out" for you, numbnuts.
```

Think about it. Poof! Just like that, Smeggie!
And there ain't a thing you can do about it.
You're helpless!

You CAN, however, show the newsgroup what you're
made out of (shit or manhood)....by one of two
things: (1) continue to exercise your freedom to
stalk, slander, and libel me, or (2) voluntarily
adopt the above contract and proceed as I will
do after I turn out your lights in a minute....

Either way, Smacksie - suit yourself. The bottom
line is that you are REALLY out of choices now.
You exercised your "rights" to imbecilic idiocy
once too often, and so it's just about.....

.....lights out for you. Think about it, Smacksie.
You're fixing to get flushed! And you have no
control whatsoever...no choices....no honor.
You're empty-handed and empty-skulled.

However.....IF you opt to honor a reciprocal
contract, you may rest assured that for as long
as you maintain your side, mine will remain in
force, too. It will probably remain in force
anyway, though IF it stays one-sided, then it's
MY choice to suspend, revoke, alter, and invoke
it anytime at my pleasure and desire.

YOU can take that choice away from me by honoring
it, too. All you have to do is STATE it and ask
someone to forward your post to me. (Sorry, but
when you get to the end of this post, you'll already
be twitted out and vamoosed from my world.) heh heh
(Doesn't that just gall the poo-poo outa you?) :-)

It would have been nice to have your explicit
agreement, but since you are too juvenile and
prepubescent, I no longer expect it of you. I
expect nothing but mongoloidism from you now.
That's why it's lights out for you.

Good bye Smacksie. See ya - wouldn't wanna be ya.
<Brrrrrrrrrriiiiiip!> (Guess what that was?) :-)

So go ahead and start a new campaign of e-mail
bombs and forgeries. Eat your heart out, you
friggin little wimp. Spend more of your time and
money on me. Heighten your obsession on me.

...or.....turn the lights out on me, too.
You CAN do that, you know.

But you ain't got it in ya, huh? But it doesn't matter,
because NOW is the time we all have been waiting for.....

Lights out, Smacksie! Adios.

<click>

<And the Smacksie darkness begins......>

640. FS: Pro-60 W/Nicads/Charger/AC/etc

Newsgroup: rec.radio.scanner
Date: 1998-07-05 00:00:00 UTC
From: rbatina@infinet.com
Message-ID: <ULQn1.428$_3.13224536@news2>
Source record: 153951
Cross-posted to: rec.radio.scanner,alt.forsale,misc.forsale,misc.forsale.non-computer

For Sale ($160 shipped):

Radio Shack Pro-60 / 200 Channel / 900mhz / Handheld Scanner & Accessories

Comes complete in it's original box, with instructions, NiCad battery pack, charger/stand, AA battery adaptor, antenna, AC adapter, and charger instructions. A complete kit for AA battery, NiCad, or AC outlet usage.

Features:
200 Channels in 10 banks of 20 frequencies
Triple Conversion to reduce interference
AM/FM/WFM Modes with override feature (Allows you to listen to FM 88-108!)
NiCad Charging Circuit - recharge the batter while inside the scanner

Coverage:
30-512 mhz - with NO GAPS!
760-824 mhz
849-865.9875 mhz
866-869 mhz
894-999.9875 mhz

This scanner covers more than a lot of other scanners, most notably being it's ability to receive the FM Television audio channels as well as the 'regular' broadcast FM stations that you can hear on your car or home stereos. This is a nice feature when the scanning gets a little dull and you just wanna listen to some tunes. :)

The Pro-60 also allows you to listen to: VHF Low, 6 Meter Radio, FM TV, Land Mobile Service, FM Radio, Aircraft Band, US Government, 2 Meter, VHF High, VHF Wide, 1.25 Meter Radio, Military Aircraft, UHF Low, UHF Wide, UHF T Band, Conventional Systems, Conventional/Trunked, Public Safety, Trunked. All of that info is taken directly from the instructions.

So, this will get pretty much any fire, police, highway patrol, business radio, government/public aircraft, amateur/ham radio, family radio service, sherrif, DOT/city vehicles, cordless phone, baby monitor, fm radio, tv radio stations that you want to get.

All of it is in nearly new condition, and I'm sure you will be very happy with it once you receive it. All for only $160 shipped via Priority Mail.

Thanks

Oddly the feature is not written about in the owner's manual. I had to do
some research to figure it out. The Programming on the Pro-91 is different
in that you must put the radio into the "Program Mode" in order to enter a
frequency into a channel bank. On the Pro-90 you just punch it in and press
enter. More convenient on the Pro-90, but more likely to inadvertently erase
frequencies unintentionally.

To the RRS and ARS newsgroups:

Simple. I just turned somebody's lights out
for an indeterminant, but probably long
period of time.

I've done it before and it kills his soul'
eats him up; activates his ulcers and piles.

He responds with a blitzkrieg of forgeries,
e-mail bombs, and posts from a dozen of his
aka's. I am usually not the only one on
his target list. He singles out others for
these attacks, too.

So be forewarned and forearmed. It is EASY to
tell forgeries. When I post to the newsgroup,
the PATH line of MY posts will always end with

!newshub.cts.com!relief.cts.com!not-for-mail

If it ends with anything else, it ain't me.
Furthermore, legitimate headers from MY posts
will also contain the following entries:

Content-Type: text

If an e-mail header ain't pretty much exactly like the
above, it ain't from ME, boys..... If ever there is a
question, send me a civil e-mail to: bcheek@san.rr.com
and then check out the header of my reply.

The person whose lights I just turned out is given
to sending large e-mail bombs to people IN MY NAME.
Beware, if you get an unsolicited e-mail "from me"
that has a large file attachment. Just delete it
before you download it. I will not send anyone
unsolicited files, so there's a clue right there.

In a word, the person whose lights I just turned
out WILL go on a rampage and while I will be a
prime target, so will some of you....just so he can
say it wasn't HIM. But it is.....

Protect yourselves. And if and when anything does
happen, I urge you to publicly discuss it and cite
as many of the details as you can. There are people
on this newsgroup who are skilled at ferreting out
the sources and causes of these kinds of issues.

Now....shall WE get back to scanners and scanning?

THAT's my choice anyway, for as long as it doesn't
prove futile. It will take a lot of other choices
to dispel that futility. And each choice is an
individual one. Despite that this is a "newsgroup",
WE are not a "group". WE are only a mass of individuals.

I don't think it gets any better than that. Every
choice remains an individual one; and the solutions
to ALL problems, perceived and real, lay in control
of your own computers and control of your own software.
Once you are in control of your hardware and software,
then it is possible for us to act and function as a
group. But again, this is a matter of a LOT of choices.

Enough to constitute a quorum anyway.....

Scanners and scanning coming up at 11.

Source record: 153957

(This is directed to Bill Cheek, but I am posting it here in case the information might be of use to others).

Several years ago I built one of these interface kits to use with my PRO-2005. I ran across it recently, virtually completed, and commenced to wondering why it was I had never finished it. Finally it dawned on me that I seem to remember a caveat about using the interface with a 2005 on which the TCXO had been replaced with a crystal (scan rate speed-up modification), one of several Cheek-authored enhancements I have performed on the unit.
Questions:
(1) Am I remembering correctly?
(2) Is this an "absolute" -- i.e., will the HB-232 absolutely not work with a crystal?
(3) What's the liklihood that RS still stocks the TCXO?
(4) Should I forget it and get one of the new models (SB-232, I think?) ... AND ..
(5) Does the same caveat apply with the newer interface?
Thanks much for the help,
Dave, K4CC

I am in the market for a BC200XLT or Pro-46 scanner with cellular and battery modifications. Please email me with description and price.

> Questions:
> (1) Am I remembering correctly?

Yes, but the TCXO is not an issue. That's X-301
and you'd NEVER have reason to mess with it. So
what you did was probably replace the ceramic
clock resonator (7.37 MHz) with a quartz crystal
of some higher frequency..... 10 MHz?

> (2) Is this an "absolute" -- i.e., will the HB-232 absolutely not work with a
> crystal?

Depends on the frequency speedup, but it
probably won't work. The AutoProgrammer
and Remote Control side of the HB-232/CE-232
are dependent on the timing of the keyboard
polls from the scanner's CPU. When you boost
the speed, that timing gets altered and the
CE-232 can't interpret it correctly.

> (3) What's the liklihood that RS still stocks the TCXO?

Not for the PRO-2004, and maybe not for the
PRO-2005, but call (800) 442-2425 and ask for
PRO-2005 Cat #20-144, Item CX-501 (7.37 MHz).
Won't cost much.

If they don't stock it, I have a few, one of
which can be yours for five bucks, ppd. Theirs
may cost more or less, but will be brand new,

whereas mine are used (salvaged). So call
Tandy National Parts first and see.

> (4) Should I forget it and get one of the new
> models (SB-232, I think?) ... AND
> (5) Does the same caveat apply with the newer interface?

The newer CE-232 is the same electronic design as
the older HB-232, but with a redesigned PC board
to make assembly a little easier and to make it
easier to access more physical features. But there
is no reason to upgrade.

And yes, the newer CE-232 still won't work with
scanners that have an altered Clock Resonator.

Frankly? Speed isn't all that it's cracked up
to be. There are rare exceptions, but most of
the time, there is no real issue.

Oops! "John.Mackey.KA0SSF" <jmackey@parg.org> gets caught lying again:

>Note: I always use my callsign in posts!

Oh, so you claim now that your callsign is: KA0XSSF? That's the one you were using last week in your posts. Considering that the maximum number of characters that an Amateur callsign in the U.S. can have is 6, that's quite a feat. It's also a flat out lie to claim that you always use your callsign in posts, because you obviously don't. And before you start accusing me of adding that X, go back and look at your own posts, dingleberry.

Exasperated,

I did the cell mod on my Uniden BC200xlt. I search 870-896 and receive hardly any cell calls whatsoever. I might find one in the entire range. Is this because it does not search in 30 mhz steps? I even tried searching for images-Nothing. Before I did the mod I was able to find plenty of images. Did I screw something up?

You're right, of course, and I should NEVER trust my memory in these cases! It was the clock resonator and I *think* I recall that the crystal I used was around 9 MHz - whatever was in the junk box that was close.

>PRO-2005 Cat #20-144, Item CX-501 (7.37 MHz).

Thanks, I'll give it a try. If they don't have it, I'll take you up on your offer of a salvaged one, but wonder would another crystal (say, oh, 7.37 MHz!!) also work?

>Frankly? Speed isn't all that it's cracked upto be. There are rare exceptions, but >most of the time, there is no real issue.

No question - it serves no practical purpose - just one of those enhancements that I did "because it was there"!!

Thanks a lot for the help.

<Pathetic anti-Cheek off-topic rant deleted>

Have you noticed something tuna-breath?

I have pretty much left you alone this weekend...just to see if you really mean it when you say you want it to end. And then I turned on my computer today and ask "Computer, computer on my desk, has the Scarlet Mackerel been a pest?"

"Yes he has" the computer replied.

I'm just guessing here, but with the canceled posts as reported by Bob Eisner, I'd say you have sent out about 300+ posts this weekend. My, what a busy little worm....

....and how many of those had to do with our beloved topic??

None.

Nada.

Zippo.

Zilch.

Zero.

Nil.

And I thought to myself, "What if this stupid bastard mack-tard actually *likes* to be flamed?!" <shudder> "What if all I have been doing all this time is giving the little bozo one more reason for living?! EGADS! was it ME that kept him from using that Mosberg 12 gauge in the closet?? For shame upon me...."

So, I think I too shall follow the wise and all knowing Bill Cheek into the land of NoMoreJohnMackey. Imagine, no more flames, lies, forges, hypocrisy, poor grammar, namecalling, snotball blowing and the like. Just.....scanners! Wow. I honestly didn't think such a world existed...

Perhaps, when all of us finally tire of toying with you, the Mayor of Twittown, you'll finally have the free time to take up waterless high diving, or one of the other fun and fascinating alternative pastimes I have suggested to you.

See, I'm tired of it. It was fun, for a while, but I'm really bored with it now. Redundancy and repetition can do that to anyone. (except you,

obviously) So you are now on a one way train to PLONKsville. Do not pass go, do not collect $200. You are not even a pimple on the ass of a mosquito in the ocean. You are gone. Toast. Ignored. Flame all you like. I won't even notice. You'll get nothing for your efforts, little man. Empty space. Kinda like what's between your hairy ears.

So John, I propose a toast. Heres to the day when you finally snap, smoke half a pound of crack and drive a carload of nitro glycerine, gunpowder, and ammonium nitrate into Emilio Goldsteins house at 100+ MPH, with Stuart Upton in the trunk. ;-)

<Glug, glug, glug... ahhhh>

Until Then, you friggin' loon,
-Phil

Unfortunately Icom is doing a good job of hiding the bad news. Pop Comm
August has three articles on the Icom including one that says they are
releasing the command set to qualified software developers (those that paid
for the protocol and signed a nondisclosure agreement!). Clearly this is
wrong as Icom is also telling customers that third party software is not
supported. I use third party software with my unit all the time, but even
so, I am not pleased with their approach to customers either. But this is
isn't discovered until the unit is bought and usually running for a few
months.

Why don't you try using a ham ATV downconverter to scan radar frequencies on your bearcat. this way, you can find the radar guns and listen to the McDonald's drive thru at the same time. If you get real determined, you can try mounting the 18" DSS parabolic satalite dish to the back of your pickup. This should give you alot of range, especially for the ass shots. You could even engineer a revolving mount, so it would be kinda like radar. For a more stealthy approach, you could tape a half-wave "chicken wire" to the roof with mezcan tape. If all else fails, try mounting tracking transmitters on all the patrol cars so you know when they're around.

good luck and fear the cops

Our area has E. F. Johnson trunked radios. I know that the trunk-tracking scanners that I have seen specify Motorola systems. Is there a scanner that will work with the Johnson system?

I have noticed that almost everyone under the
sun gets some kind of pleasure from flaming
Mackey. Seems like the people who complain
the most about the flaming that Mackey gives
out dish out a proportionate amount themselves.
Whoever is REALLY concerned about the
flaming stop putting him on the defensive. It is
an easy thing to kick someone hardest when
their down on the ground. I'm starting to not
blame him for lashing out. When you flame
Mackey... ask yourself... how much fun am I
having doing this. Resist the temptation.
Now... where's my migraine medication.

681. Icom PCR-1000 3rd party software

Newsgroup: rec.radio.scanner
Date: 1998-07-06 00:00:00 UTC
From: John McDermon <mcdermon@usa.net>
Message-ID: <TU2o1.165$N33.322470@pm01nn>
Source record: 153821

Icom has taken a very hard line with respect to use of 3rd party software on the PCR-1000. They have said (to me at least) that use of such software may VOID the warranty if the EEPROM is corrupted.

Yet, on their www.IcomAmerica.com, they continue to ADVERTISE a number of 3rd party software vendors, most of whom's software supports the PCR-1000. Icom tells me that this is "unofficial" support as they haven't licensed the protocol for that radio. But no mention is made of other radios needing to be "licensed". Is this just a new policy related to this particular radio? What sense does it make that the ONLY radio Icom sells that REQUIRES computer software for use is the ONLY one that Icom refuses to support when used with anyone's software but their own? And how can they publicly "advertise" the third party software sources (yes, at least a couple of them even mention PCR-1000 support on Icom's web site), and yet tell the user that if he buys and uses THAT VERY SOFTWARE, they will deem him to have done a "hardware mod" and thus void the warranty? I don't see how they can have it both ways. They obviously want the potential buyer to be led to believe there are software options out there. But if you choose to buy and use one, and the radio itself is damaged, they start telling you that it is due to the third party software.

This is BS. They obviously have a SERIOUS PROBLEM WITH THE DESIGN OF THE PCR-1000 radio itself. They left the EEPROM data open to being easily overwritten by rogue software commands - and quite possibly those could come from transient situations like power on/off, modem software pointing to the wrong COMM port, etc. Maybe it is exascerbated by the use of third party software - possibly made even worse by Icom's refusal to supply any documentation on the software commands needed to properly control the radio. But the fact remains, that the radio is all too easily damaged - and software commands should not be considered the primary culprit here. A radio should be relatively impervious to random software commands. If they had a "write protect" feature protecting the EEPROM, this wouldn't even be an issue. Its time for Icom to take responsibility for their poor design decision and fix things. Either recall all the radios to retrofit a "write protect" or provide us with an ability to BACKUP and RESTORE the 128 bytes of fragile EEPROM data ourselves! To do less ought to bring on the wrath of an army of current PCR-1000 owners.

Don't let this issue die! Those of you who have yet to experience this EEPROM corruption will eventually know what I'm talking about. And I assure you that Icom will be less than receptive to you if you every mention using 3rd party software on the radio. Its time for Icom to step up and do the right thing. Either put PROMINENT

disclaimers in their advertising and on their web site about the prohibition on use of third party or self-written software - or provide the kind of support they are so capable of doing and fix this problem forever.

> Just wondering what CTCSS is, and is it possible to add it to a
> scanner that doesn't have it already? How does it work, etc.?
> Any information or pointers to resources would be greatly appreciated.

CTCSS stands for Continuous Tone Coded Squelch System.

CTCSS consists of 50 or so low frequency audio tones,
under 300 Hz. One use is for shared frequencies so
that Joe's Pizza delivery drivers don't get to hear
Pinkerton's Detectives, and vice versa, though all
systems may be tuned to the same frequency.

Each company sends a unique "subaudible" tone along
with its regular transmission. Receivers of that
company have a tone decoder tied into the squelch
system. The result is that ONLY receivers with the
tone decoders set to THAT tone will break squelch
and the other company's receivers set to a different
tone will not.

In other words, Company A can't hear Company B and
vice versa.

Generally, the users and even scanner listeners can't
hear these CTCSS tones because they're below 300 Hz,
and the receiver's audio circuits are filtered for the
voice band of 300-3000 Hz; e.g., the tones are filtered
out before getting to the speaker or headphones.

For other information about CTCSS, see my recently
posted FAQ under the subject:

Subject: Scanner Data Decoding FAQ

Yes, most scanners can be retrofitted with CTCSS
decoding capability.

I did not think you were worrying about that, but was worried
about an end to the flaming. By stating above, you seem to
make it clear that you want a end, only if you can have the
final word.

The way a man would end a flame thread, would be to ignore
it, yet you got worked up and flamed him back.

>
>Now, if you are a fair person, I expect you to tell him IN PUBLIC

No need. Bill has already stated that you are in his killfille again,
and I don't expect to see a reply. What end would I achieve by
telling him what I told you? What end would anyone achieve?

Wouldn't it be easier to just reference the APCO Organization WEB page
since this info was taken from there?

Unless you have the TSB102xxxx manuals from APCO, the information
presented here is almost useless. The TSB docs have much more detail
about the common air interface and vocoder protocols. These manuals
are available from the APCO bookstore, for a price.

Joe

Over 50 off topic posts over the weekend. You are a total loser.

I hope abuse@mci.net and postmaster@mci.net will take notice to all the complaints about you and drop you AGAIN.

You need professional help. Please spend time with a shrink rather than in this NG.

>>http://www.fsws.com/ear.htm Jim AA0FJ
>>

Hi James,

In my county we are selling them to the public. They have been
configured with the tones in such a way that they are only activated
if WE set them off. That way we can assure people that they will be
heard only when a real emergency is happening locally. The local
radio station which is contracted to perform EA broadcasts also sells
a receiver, but that gets activated by them for six or seven different
counties in the area.

The ones we sell get tested twice a month, once with the test for the
school and hospital emergency receivers, and once with the outdoor
siren test. Other than that they are only activated during an
emergency in the county that would affect many people. And not just
weather...

This also gives the public a radio they can use to find out about what
is happening, rather than searching through local broadcast media
stations who may or may not know yet what is going on...

I am told that they CAN be configured as a general EA receiver and
will work anywhere in the country in that configuration. Having seen
no advertising I would bet they use the SAME technology since they are
relatively new. But that's just a guess. Hope this helps.

What are you trying to say Bill? You don't want the "one on one" assistance of a well trained sales person? BTW the numbers listed on the picture are not the numbers that the 800 operator will be able to order. The numbers need to be cross referenced to what are called RSU (RadioShack Unlimited) numbers. I recommend that you shop around at RadioShack for an experienced person. Probably the manager and have that person take care of it. Don't accept the help from the sales droid if they don't know what they are talking about.

I have to go ten miles to find an experienced person at radio shack,
there is one 3 miles away and they don't know what an rsu is .
I needed a set of ear pads for a pair of their headphones and the so
called local experienced radio shack person ststed they did not have a
replacements for them and when asked if they could look in the rsu book
they stated there was no such book, also when asked to call Tandy parts
he said that he would need the part number.

So I eneded going to the store ten miles away and he called Tandy parts
and got the replacements ordered.
Not all Radio Shack people are experienced and at times it is best to
call directly into the parts center if you have the part number
available, also another way is to fax a copy of the parts diagram with
the part circled and they can look it up from the fax.

> Any information or pointers to resources would be greatly appreciated.

CTCSS stands for Continuous Tone Coded Squelch System.

CTCSS consists of 50 or so low frequency audio tones,
under 300 Hz. One use is for shared frequencies so
that Joe's Pizza delivery drivers don't get to hear
Pinkerton's Detectives, and vice versa, though all
systems may be tuned to the same frequency.

Each company sends a unique "subaudible" tone along
with its regular transmission. Receivers of that
company have a tone decoder tied into the squelch
system. The result is that ONLY receivers with the
tone decoders set to THAT tone will break squelch
and the other company's receivers set to a different
tone will not.

In other words, Company A can't hear Company B and
vice versa.

Generally, the users and even scanner listeners can't
hear these CTCSS tones because they're below 300 Hz,
and the receiver's audio circuits are filtered for the
voice band of 300-3000 Hz; e.g., the tones are filtered
out before getting to the speaker or headphones.

For other information about CTCSS, see my recently
posted FAQ under the subject:

Subject: Scanner Data Decoding FAQ

Yes, most scanners can be retrofitted with CTCSS
decoding capability.

> What are you trying to say Bill?

I didn't "try" to say anything. :-)

> You don't want the "one on one" assistance
> of a well trained sales person?

Not when it's possible to get exactly what I
want and ensure no errors or lackadaisical
handling from half- and non-trained minimum
wage sales persons. The price of gas and time
these days makes it worth it to do a lot of
stuff for your own self. :-)

> BTW the numbers listed on the picture are
> not the numbers that the 800 operator will be able to order.
> The numbers need to be cross referenced to what are called
> RSU (RadioShack Unlimited) numbers.

It doesn't matter. If you know what you want, the
support people at (800) 442-2425 will go straight
to it and have it on the way to you for a credit
card and a free phone call. You don't have to
spend the gas and time to traipse down to the
local Radio Schloque and then take a chance on
them getting your order wrong or not called in
at all.

I've seen that happen, too. Make an order,
and then for weeks on end, it doesn't come in.
Finally you learn the order never was placed.

> I recommend that you shop around at RadioShack for an experienced
> person. Probably the manager and have that person take care of it.

Managers usually do well, sure. But you still
have a middleman there, and you still have to
spend the time and gas to get down there.....
and managers aren't among the brightest people
on the planet anyway. They're just super-droids
who have done exactly what they were told to do

for years. And grinned a lot as they did it.

> Don't accept the help from the sales droid if they
> don't know what they are talking about.

And the time it takes to determine if they know
their stuff is a waste on top of the gas and
time it takes to get there. :-)

FWIW, I have never had a problem with Tandy
National Parts Center at (800) 442-2425. Of
course, I always know what I want and that
may make a difference. But they are quick,
responsive, and the cost is acceptable. And
I always get the exact item I order. Not
so, the few times I've ordered out of a store.

[snip]

Don't count on the 800 number working perfectly.

I wanted a spare battery holder for my scanner. I looked up the part number in the service manual. Went down to the good local RS. The salesman called the support/parts folks to order it. They told him that the parts number from the manual wasn't what they needed - they needed an RSU number.

So far so good. Then they told him what the RSU number was, and that it should be a store stock item.

The number they gave him was a nicad for a cell phone.

The salesman sought help from the store manager. The manager got the RSU book out, and looked up the part. I got to look at the listing in the book, too, and was convinced that it was indeed what I wanted. A week later it was in my hand.

Like any big organization with multiple points of contact, you can't assume that any one of those points is always going to work.

704. PC895 Program Update

Newsgroup: rec.radio.scanner
Date: 1998-07-06 00:00:00 UTC
From: Phil Smalley <psmalley@mail.hac.com>
Message-ID: <35A12584.24B0@mail.hac.com>
Source record: 153844
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello all,

The long weekend gave me just the extra time I needed to finish all the bells and whistles for the new version of PC895. I will be ready to release it one week from today (just wanna do one last bug hunt, and update the help file). Here is what I have put in the new version:

1. You can minimize PC895 down to the taskbar. The alpha-tag (or frequency, if there is no alpha tag assigned) appears when a frequency becomes active.

2. There is a view button, which shows the scanner display in a larger font, for viewing from across the room, along with the scan and manual buttons, and a "zoom" button, explained below:

3. The "Zoom" button allows you to go to any channel in the scanner quickly and easily. It pulls up a list of all channels in the scanner, and goes to that channel when you select it from the list. This makes it easy to find and goto a tactical channel during monitoring. In trunked mode, you can use this feature on all talkgroups in the system.

4. Enhanced Search. When searching frequency ranges (and now talkgroups) a list of hits, along with the date and time of each unique hit is recorded in a listbox. You can skip found frequencies or talkgroups, to prevent the scanner from locking on to a known channel when searching for new ones. You can select hits from the listbox to add to the scanlists database and, if you own the Spectrum CD-ROM, you can lookup a frequency hit on the fly by double clicking it from the listbox.

5. Enhanced Display and Controls. The display and controls have been redesigned from the ground up. The interface more closely resembles the front of the radio, and includes the numeric keypad (I got a lot of requests for that one). The display now indicates the scanlist, along with mode indicators, signal strength, frequency, channel, ctcss frequency, and alpha-tag. There are also icons along the bottom left that show if the Spectrum CD is present, if the comm port is connected, etc.

6. I also updated the communications routines within the program, to make it more compatible with Pentium class CPU's (the original program was developed on a 486). It now runs 99.9% error free on my Pentium 166. The problem with version 1.5 was that some Pentiums ran too fast for the program to collect all the data from the scanner. The code was rewritten to wait until it receives a carriage return character from the scanner, which has all but eliminated the data errors.

7. Softscan. I am still debugging this, and it may not make it into this release (if not, I will build a patch to add it later) The idea is that when you go into "SoftScan" mode, the program sends frequencies directly to the scanner instead of programming the scanners memory, allowing you to scan as many frequencies as you want (No limit. Scan 2000 or more channels at once if you like), or listen to special event frequencies without actually programming the scanner. You can also use this feature to fine tune your scanlists before physically putting them into the scanner. The drawback is, of course, this only works in conventional mode - trunked frequencies need to be resident in the scanner to work.

8. Major debug and overhaul. I have spent nights and weekends for the past several months hunting down and exterminating more bugs than the Orkin man. However, I still found two last night which I plan to nail tonight, so I won't say that I found them all - yet. However this version is much, much, MUCH more reliable than 1.5, and should run just fine on just about anything from a 486 on up.

Now, I still don't have a page of my own up, and I might not for a few more months (I really don't have the spare time to maintain such a beast right now), so I need ONE volunteer to host the program on their site. Others who wish to host the program can get it from the volunteer site. That way, if (God forbid) another bug rears it's ugly head, I won't have to spend all day uploading a patch to everyone. Please respond via email if you would like to host the program, and detail what kind of server you have, etc. I would like to pick the fastest and most reliable of the bunch, because last time it almost killed a server as a result of all the traffic (over 2500 people hit it on the first day).

Thanks in advance,
-Phil

True enough, though that (800) 442-2425 number
seems to not be widely known or used. Some
years ago, it was a direct line for the stores,
but since then, they deal with anyone who calls.

And it beats other avenues of Tandy support that
I've used over the years. And, what's more, when
they can't help, they seem to either know the final
answer or are able to direct you to who has the answer.

Point being that is a free resource and a very
good one, and probably should be the first step
to explore. Doesn't cost gas or much time, and
you don't have to deal with imbeciles.

:-)

Joe,
Nope, it's neither. The system administrator has confirmed to me that it is a new style of anti-scanning tech. that Ericsson is using now that their affiliation with GE is mostly history and they can't use the GE "we bring good things to life" beeps anymore. BTW, all the new handhelds on this system are labled Ericsson, not GE as in the past.

I'm working on a web page directory for california and was wondering if any body could email me frequencies for Kern, Tulare, Fresno, San Luis Obispo, Tuolumne, Santa Barbara and Amador counties. Any help would be greatly appreciated, thanks for all of your help.

Thanks in Advance,
Mike

>to find one if you want the scannermaster product.

Note that for anything other than casual shortwave listening, you'll
probably want to use a different radio from the scanner. Full
coverage scanners typically have dynamic ranges in the area of 60 to
maybe 70 dB at best.

Even mediocre shortwave radios have dynamic ranges better than that.

Keep in mind that shortwave radios are designed for lots of signal in
high interference environments, whereas scanners are designed for
coverage of wide bands of frequencies. The two goals, while not
mutually exclusive, are very difficult (expensive) to achieve
together. You won't find that kind of performance in one box at
consumer prices (yet).

Why don't you go to:

http://www.wvsc.wvnet.edu/~fcc/

and download the California database and
get ALL the pertinent frequencies you
want. No sense in messing around with
a few bits and pieces of lists and scraps
of lists.

It's probably the same as with some digital systems. You can purchase a receive only version of their radios (which can be and are censored when sensitive info is transmitted) for around $3000. Gee is that all? I'll take a dozen....

Sounds to me like "we the people" need to speak in a language that Icom can understand: Don't buy the damn thing. And of course, write to the company stating that once the problem is fixed, you'll be the first in line to get the radio. Then watch what they do...

Hi ya Peter J. Boe of tvine@teleport.com

Yes, I considered your "peaceful" post
very carefully and even sent you an e-mail
to express my profound thanks for your
kind post. Unfortunately........

....there is no Stuart Upton (supton@paranet.com)
at paranet.com You are bogus. A fake....

What's more, a Grammar/Syntax analyzer suggests
you are another well known kibitzer: Peter J. Boe
of tvine@teleport.com. The path where you
injected your post is:

!nntp.teleport.com!news.teleport.com!not-for-mail

Your NNTP-Posting-Host: 204.202.170.26 happens
also to be:

Teleport Internet Services
(NETBLK-NWN-TELEPORT) NWN-TELEPORT
204.202.160.0 - 204.202.175.255

The real funny thing is that the domain where
your bogus e-mail is forged happens to be in
Texas, and now they're pissed off. Shoooey!

Oh, and since Teleport.com, located in
Portland, Oregon, is not an open NNTP server,
this is supportive of the Grammar/Syntax
checker's output that you are none other than
good ol' Peter J. Boe (PjB) of tvine@teleport.com
otherwise known as the Thorny Vine Music Co;
or is it the "Twisted Vine"?."Torqued Vine"?

Nice to have you back with us, Petey, stirring
things up when they threaten to settle down.
You always were good for that. I see you are
still in rare form.

Prozac not helping you much? Tsk....tsk...tsk.
I'll help. You just hang loose.......

Sure. But quartz crystals might have more
overtone products than ceramic resonators.
I'm not sure of that, but it is a concern.
If you had a quartz rock close to 7.37 MHz
at or on the high side, it could be worth
a try. It will work, for sure.

> >Frankly? Speed isn't all that it's cracked upto be. There are rare
> >exceptions, but most of the time, there is no real issue.

> No question - it serves no practical purpose - just one of those enhancements
> that I did "because it was there"!!

Right. Back in my earlier days of scanner hacking,
I did things like that. But experience over the
long haul showed some things to just not be worth
it and others to be worth their weight in gold.

Crystal speedups were one of those things that
just weren't worth the side effects. One exception
is when you're doing wide spectrum searching. Speed
counts. Another is in rural areas where any signals
are rare and few. Speed counts.

But for most metro situations, it's like a Ferarri
and a Volkswagen on the freeway in rush hour. Except
scanner speed doesn't offer "prestige" or comfort.

> Thanks a lot for the help.

You betcha. Any time.

If you use a good newsreader like Agent, you can add both of them to your bozo list. This will filter all messages from them. I am new to this group, but so far neither of them have posted anything scanner related. They are cruisin' to be put on my bozo list.

I use the filters in Agent and that works pretty good. Occasionally one of them changes his name and it sneaks through, but for the most part I don't even know they are still here.

I've had my Pro-90 for about a month now. Actually the speaker on the first one stopped working after about 2 weeks. The local RS gave me a new one. I haven't had the problems you are describing. The only time my Pro-90 has trouble tracking in trunk mode is when I am about 20 miles away from the transmiter.

ALL OF THEM. Well, all table tops. Most of them, anyway, that cover from 30 to 70 MHz.

Go here http://www.scannermaster.com/prod05.htm
and look at the second product on that page.

Note to PRO-2006 owners (that includes me) -- the product probably is not right for your radio. What other scanners cover 30 to 70 MHz? You may have to find one if you want the scannermaster product.

748. FS: FRG-100B Yaesu SW Receiver

Robert or anyone else!

Once again we are getting more rogue cancels in "rec.radio.scanner"!

Then appear to be coming from a system called "warpgate.com" but I
am not sure.

This sunday afternoon (7-5-98) I made several posts in rec.radio.scanner
& they were all deleted or canceled by midnight. There is at least
one other person who had their posts canceled also.

Could you please assist to determine the cause/guilty party-system?

There is one person who would be likely party for doing such actions,
but I want to avoid giving his ID untill more can be checked.

thanks for your help, it is appreciated!

>to 70 MHz.

WRONGO! Darn few "scanners" cover the shortwave bands, which are
generally considered to run between 1.6MHz and 29.999MHz.
In table models only the AR-5000 and ICOM R8500, both of which sell for
about $2,000, and some of the older top-of-the-line receivers cover both
shortwave and VHF/UHF, and they're really not in the same ballpark as most
"scanners."
For handhelds, the AR-8000 is probably the most common radio to cover
shortwave. Others include the Yupiteru, the new Alinco (if they ever get it to
the market), the ICOM R-1 and R-10 and maybe a couple of others. Prices
typically start around $500.

Charlie--

The Bearcat 3000XLT covers the military air band, and a lot more (no cellular, at least not directly). The street price is $350 or so (I haven't checked lately). I have had mine for a couple of years and like it. Note that it does not do "Trunk Tracking" though.

I don't have the BC 895XLT. I own the BC 890XLT, which I bought used and I
didn't have the manual. So, I stopped at the local radio store
and they had a few extra copies of the BC 895XLT which isn't that much
different from the BC 890XLT.
here are the highlights:
Trunk Tracking
300 Channels
10 Banks
Signal Strenght Meter
CTCSS
14 Bands
29Mhz.-956Mhz.
10 Priority Channels
VFO Control
AutoStore
Wheather Alert
AutoSort
Unique Data Skip
Memory Backup
LCD Back Light
Auto Record
Scan/Search Delay

You are unlikely to find a new scanner that is capable of receiving cellular phone frequencies. Even finding one that can be modified is difficult. On the used market I would recommend the RadioShack Pro-43. Earlier models were modifiable and it covers the military airband.

BTW, if you know the genealogy of your surname, email me.

Hi,

Just purchased the Pro90. I have a Pro41 portable (10ch)
and Pro2021 base (200ch) that I would consider selling.

I know they aren't worth much,
they both work fine, but was
wondering if someone might tell me what a reasonable
asking price for either or both might be?

Thanks in advance,
Richard H.

Oh, and I need a new base and mobile antenna.
Any suggestions for that are also appreciated.
Thanks again!

I owned a Ferret by Austin at one time. It is an excellent antenna indeed. The only complaint is that from 27mhz straight up to 900mhz, the Monitenna from Channel Master did pretty much the same performance job. The only restriction on the Monitenna is that I don't recommend mounting it on a metal mast, rather a 6ft piece of schedule 80 pvc pipe for more truly omnidirectional performance. The most amazing thing about it is that it is only around 50 bucks with the 50ft of RG6 cable already attached. This thing, I believe to be the bargain of the century as I have probably spent over a grand in experimenting to see what was the best base antenna, and after all this my vote still goes to the Monitenna. If you don't know where to get it, call Glenn at Scanner's Unlimited and he can ship you one. (650)573-1624. Good luck

If you monitor from certain locations, a CTCSS equipped scanner is worth it's weight in gold. I live within one mile of a 250 watt paging transmitter, and the local government 300 watt repeater. Scanning is NOT fun with the intermod from these systems. Employing the CTCSS option of my scanner eliminates just about all of the problem. The only time I get a "squeal", is if a distant transmitter opens the squelch and a local transmitter comes on. Without CTCSS, the scanner would lock on any channel when a local transmitter came on.

Even better: Program in the *mobile* MDT channel. Some systems have
built in GPS which constantly advises dispatch of their location. By
putting in the mobile side, you should only hear the close ones as they
run plates, pull up incidents, etc.

Agreed. I just thought I would mention it just in case anyone
thought that cheaping out for a Ferritronics CTCSS decoder was
a viable option to buying a product specific add-on unit.

> I don't see much sense in employing CTCSS for
> public safety and local government frequencies
> since everyone is on the same tone anyway. Again,
> shared channels is where it's at.

On the contrary. Where I live you need it to filter out the
shepherding tones on the police. If you don't have it, you
get tired of the "bzzzt-bzzzzt-bzzzzt" quite quickly. Our
local Ambulance have a similar voice/data configuration too.

> Many people aren't into mods, and so for them
> the way to go is a dedicated CTCSS scanner, if

Put it this way, I'm *into* mod's and I wouldn't bother fitting
an aftermarket CTCSS into a scanner not engineered therefore. 8-)

> Considering that CTCSS doesn't
> come on the best scanners, it's a tough thing for
> me to reconcile stepping down to get CTCSS built in.

I don't know if the top-of-the-line Icoms have CTCSS, but I consider those to be more Monitor Receivers than Scanners. I believe WinRadio has CTCSS and my Uniden BC9000XLT certainly has it. Perhaps you could tell me which super-scanners don't decode CTCSS?

> For those who don't need the best, I'd have
> no quibble at all. Six of one; half dozen of
> the other.

I reckon 98% of scanner uses don't own the very best! 8-)

....and a new problem is introduced in the sense
that you automatically can't hear lots of other
signals. A lot depends on the level of your
scanning. If you are highly focused and concentrated
on just certain signals, then so be it. You're
all set.

> The only time I get
> a "squeal", is if a distant transmitter opens the squelch and a local

Well,, that is a fault with the scanner itself.
Like I said earlier, the best scanners don't
come with CTCSS, possibly because the need is
lessened....at least, the need as your situation
spells out.

In other words, the better scanners are better
filtered and designed so as to reject interference
and pseudosignals.

In a word, your argument is sound, but it isn't
what could be called universal or a panacea.

I have a Motorola JT1000 VHF field programmble handheld for sale. Hardly used and comes with one battery and programming key.

If you are interested, e-mail me at e002@lehigh.edu for details.

I am looking to get rid of this as i have no use for it. Any reasonable offer will be considered.

Yeah, a cheap swap meet special or an estate
sale scanner is hard to beat....when you're
talking $10-$20.

> > True, add-on CTCSS pretty much relegates you

I don't know anything about the "Ferritronics"
stuff, but Communications Specialists' TS-64 is
economical and can be externally switched, even
by software, no less.

So here I have to add a shameless plug for the
CE-232 Scanner/Computer Interface which offers
22-bits of generic User I/O, some of which can
be applied to switching a CTCSS decoder on a
per-channel basis....kind of like the built-ins
do. (Shameless, I know.........)

<Gack!> Okay, I've heard about you guys.
To the best of my knowledge, that sort of
anti-scanner business isn't employed down
here Stateside. I'm not reminded of the
old "Toronto Metromod" a tone decoder that
squelched the scanner when the anti-scanner
BEEEEEEEEEEEEEEEEEEEEEEP tone was present.

I guess your gendarmes got a little more
sophisticated since then.

> > Many people aren't into mods, and so for them

Why not? Piece of cake. But then what if
you didn't have to mess with the anti-scanner
raucous blips, farts, and bleeps?

> > Considering that CTCSS doesn't

Right. Me, too. Niche market.

> I believe WinRadio has CTCSS and my Uniden BC9000XLT certainly
> has it. Perhaps you could tell me which super-scanners don't
> decode CTCSS?

WiNRADiO has software that will decode and display
any CTCSS tones present on the carrier, but it
doesn't use CTCSS to keep the receiver squelched.

Frankly, there's not much around that classifies as
a superscanner anymore. Maybe the PRO-2042, but
it is being discontinued, and I don't know what's
to replace it yet. I suppose the BC-9000XLT
classifies in the current offerings, but <gack>
I've no use for it. It's loaded with gimmicks
and gadgets, sure enough....but it's the "engine"
that turns me off.

Of course, cars went down that pipe from their
heyday of the 60's. Remember the "pony cars"?
Mustang, GTO, Chevelle, Olds 442, et al? So

I guess scanners are following that trend.

I know both Radio Schloque and Uniden are
aggressively ANTI-MODIFICATION, and it ain't
just cellular that chaps their hides. But
neither are going to give us so much as an
extra key unless they can make a buck from it.

Which is understandable. But why close the door
to homebrew improvements? And then lower the
overall quality of the receiver engines? You
know, the RF Amp, Mixers, PLL/VCO's, IF's....
The current crop of scanners have some magnasty
noisy PLLs and mixers....

And no wonder....the trend is to pack everything
into firmware and as little as possible into
hardware. Much cheaper that way. And they can
still soak us for all that sizzle without having
to supply much steak.

> > For those who don't need the best, I'd have
> > no quibble at all. Six of one; half dozen of
> > the other.

> I reckon 98% of scanner uses don't own the very best! 8-)

Well, maybe not. But "the best" kind of sets the
standards for the more affordable layers "next to
best". By lowering that top standard, so too lowered
are those middle and lower standards.

Fer cripes sake, I'm evaluating a Uniden BearTracker
BCT-7....and the damn thing doesn't have a numeric
keypad. That's right, you can't enter channels and
frequencies by their numbers. You have to use a
scrolling process....or accept the default service
bands. <Glurk!>

Sick! Sick! Sick!

Sadly....that's where Uniden wants to take it. And
I'm not so sure about GRE anymore.

OFF THE WALL: What would you think to be the cause
of an off-frequency problem in the PRO-2004/5/6 series
of scanners? VHF-lo, VHF-Hi and UHF-Lo are fine.
But 800 MHz & up are 5 kHz off, when the lowers are
right on. Can't be X301 - already checked that.
VCOs are set right. Alignment seems right on.

I've collaborated with others without a real clue
coming back. And another fellow out here in
newsgroup-land has the same problem. Early on

I told him I didn't see how that was possible.
Still don't.....except that I have a rig on my
bench and can see with my own two eyes that it
is possible..... Anything come to mind right off?

What is really amazing, is how he keeps asking for other people to
stop the flames, when he knows every post he makes like that
just fans them.

All he would have to do, to stop the flames, is for him to stop
posting.

Scary.

Yes, scary, indeed. But no matter. I no longer see any post by Loon boy, no matter how he changes his header (heh, heh, heh, try to get thru it, loon. Cut the crap, we all know you want to). And you know, the traffic on this NG appears to have dropped damn near 50%, with 25% of the remaining traffic being return-fire from you folks. So nice, almost serene. I could get used to this...

FYI - I will eventually twit out the flames altogether, but as a fellow Mackey smacker, I wanna see what you guys do to the poor wretch before you follow mine and Bill's lead and give him the boot in the patoot. So for now, I still see replies to the Scarlet Mackerel, just not HIS posts. Even emails from him and his underlings are instantly deleted at the server with no intervention from myself. I love cc:mail...

Does anyone know of where I can find the software and schematics to build a pager decoder??? I also need frequencies (fire police other good ones ETC.) for Fairfax county VA (Reston, Mclean, GreatFalls, Vienna and the District as well) I have a book (not Police Call) but don't have a clue as to which services I can hear decently around my area (using a handheld). Thanks for your help and if you can just answer one question then that is all I need. Thanks again.

Looking to buy a 760XLT with the CTCSS board installed and operating.
Local deal in the So. Cal. area only, so I can see it first. Scratches,
no manual, no antenna, etc., and *minor* dings OK, but unit must
function perfectly. Doesn't need to receive cell, or any of that junk.
If you live here in Southern California, and have such a beastie,
respond via email and let me know what you want for it.

Have you opened up the case and checked the soldered connectors for the power supply jack? You might want to check out the snug fit of the power adapter into the socket on the Pro-39. You think your power adapter might be losing connection with the prong inside the AC socket on the Pro-39? I wonder if that squelching/static you hear is when the connection is momentarily lost and the Pro-39 is switching back and forth from battery to AC.

Why don't you take the batteries out and then plug in the AC adapter into the Pro-39 and see what that does. If it loses power every couple of seconds, maybe that would point to a bad socket connection for the AC adapter.

The RadioShack does a pretty good job of instructing you in how to set up
you radio. Of course there must be a Motorola trunked radio system that you
are wanting to listen to in order to take advantage of the trunk tracking
feature. The place on the internet to go to learn more about the Pro-2050 is
http://support.tandy.com/support_electronics/44544.htm

Good Luck

Mike--

Glad my post was of use. You make a good point--it is easy to activate the attenuator and not know it. The only symptom would be lousy reception.

So far, my 235 seems to receive quite well. I have been Trunking almost exclusively, and have not performed receiver comparisons with my conventional BC3000XLT.

There is one thing about this radio that annoys me--the battery connection. The 3000XLT and the older 200XLT that I owned before had simple slide-on/slide-off batteries. The 235 connector is fairly delicate, and it seems to me that it was not designed to be plugged and unplugged on a regular basis.

Has anyone had any problems with the connector breaking after extended use?

Just curious!

Mr. Goatrider,

I have owned a BC3000XLT for about two years, and I have been pleased. Here are (in my opinion) advantages and disadvantages:

Advantages
1) Wide frequency coverage (25-1300 MHz, minus cellular and some UHF TV)
2) Includes CB band, which is good for travel. I use this a fair amount on road trips.
3) Will receive cell images (I, personally, have no experience with this, of course)
4) Fast scanning
5) Good automatic search and store feature
6) Rapid-change battery pack
7) 400 channels, divided into convenient 20-channel banks

Disadvantages
1) Fairly large and heavy (I'm comparing to my new BC235)
2) Will not trunk track
3) No computer interface
4) Somewhat expensive

Hope this helps!

I have written a new program to talk to the Pro-2006/Opto-456. This is a very small simple program (DOS application!) that implements the features that *I* wanted. It allows unlimited channels (well, limited by memory only...), displays decoded CTCSS, DCS (untested, not used in my area), and DTMF. It displays the most recent channel hits, and can log to a text file.

I am looking for a few good beta testers (and maybe an atta-boy or two).

e-mail mailto:n7hmf@ucares.org if you are interested.

> But this is
>isn't discovered until the unit is bought and usually running for a few
>months.

There is something morally wrong for Icom to advertise the third party vendors on their web site right next to the PCR-1000, and then act like you've shot their dog when you have a problem and admit you've used that very software.

One reason I feel obliged to keep giving air to this issue is to give those potential buyers a "heads up" on this issue. I advise all who've asked to call Icom and specifically ask their policy on use of third party software with this radio.

The other reason I push this, is that as a user who's been told I can't do things with this radio that I actually took for granted I would do when I bought it, I'm a little POd about it all. Maybe keeping it in the forefront on usenet and this mail list will get Icom to act. I'm beginning to doubt it, but hey, this dialog is the ONLY satsifaction I'm probably going to get, so I'm gonna get my $500 worth! :)

Hi ya Petey Prozac! I just KNEW you'd show up.
Yes, you are "Stuart Upton" same as you tried
to be "Bud Powell" when you were practicing the
fine arts of forgery and impersonation.

> Good Lord, boy, get a grip! ME!!??

Yes, you. And son....I do got a grip.

> As far as being logged on at the same time
> as this upton, big deal.

Yes, that is a big deal. I'm glad you posted
because here is YOUR message ID:

Message-ID: <tvine-0607981626270001@pdx42-a48-13.teleport.com>

Now then, my fine feathered fellow, let's see "Upton's":

<supton-0607981336400001@pdx42-a48-13.teleport.com>

Now lookey here, lookey here, my fine forger
and LIAR: see the <pdx42-a48-13> of the message ID
of yours and Upton's posts? Well, BOTH messages
came from the SAME computer: yours! YOUR account!

See, TELEPORT.COM sees your computer's name as
<pdx42-a48-13> whether you like it or not, and
it KNOWS whenever your machine posts a message,
whether it's a bogus e-mail or a bogus Usenet
article.

So my fine fellow, you done got yourself mired in
some deep, dark, stinky stuff....and YOU ain't

even heard the end of it. heh heh heh.....cuz
da proof be in hand....AND in TELEPORT's hands.

> My internet connection is 24/7/365 and faster

Naturally. First there is the Electronic
Communication Privacy Act of 1986 and then
there are some select provisions of the
Telephone Dispute and Disclosure Act of 1994.

Your BC-200 did not come with cellular
"active", so BOTH laws will apply to some
extent.

It is illegal in the United States, the land of the Free, to listen to an unencrypted, widely transmitted, freely accessible radio wave if it is any type of a phone conversation.

Other than that, you are free to use your scanner or sell it.

The Canadian Pro-90 manual states that the squelch setting may affect trunk-tracking functionality. The manual first says the setting is automatic, then suggests that one manually set the squelch before selecting a trunked bank.

It notes that "Your scanner's squelch setting is automatically adjusted... However, the squelch setting can affect how fast you scanner acquires the data chane, ... and ... can prevent your scanner from acquiring the data channel at all."

The Canadian manual recommends setting the squelch control such that the marking in the knob is in the 12 o'clock position (front of scanner facing you) before selecting a trunked bank

The Canadian Pro-90 manual states that the squelch setting may affect trunk-tracking functionality. The manual first says the setting is automatic, then suggests that one manually set the squelch before selecting a trunked bank.

It notes that "Your scanner's squelch setting is automatically adjusted... However, the squelch setting can affect how fast you scanner acquires the data chane, ... and ... can prevent your scanner from acquiring the data channel at all."

The Canadian manual recommends setting the squelch control such that the marking in the knob is in the 12 o'clock position (front of scanner facing you) before selecting a trunked bank

848. CARMA Newsletter July 98 1 of 6

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-ya023080000707980009070001@news.theramp.net>
Source record: 153778

CARMA July 1998 Newsletter
==========

CARMA Web Page:
http://www.theramp.net/shabec/carma.htm

BBS: (630) 852-1292

The next CARMA Meeting will be on August 15th, 1998 at the Destiny Restaurant, 1440 Rand Road, Des Plaines IL.

The meeting starts at 1:00 PM, but be sure to arrive between 11:30 and 12:00 for lunch.

Remember, you must purchase lunch, since we get the room for free.

==========

-Special Event Announcement-

The annual CARMA picnic / field day will be held on Sunday, July 12th, at the Argonne Woods. It's on Cass Rd., two and a half miles south of I-55, on the left. Watch for the signs.

Talk-In is on 145.770 (PL 151.4) Simplex. It's a "bring your own" affair. Come on out for the fun. Tours of the Argonne National Labs will be included.

This is the last printed Newsletter to be published by CARMA.

Those members of CARMA who have current paid up subscriptions for the printed Newsletter will receive the like amount of printed digests until their subscriptions expire. No new printed or E-Mailed newsletter subscriptions will be accepted.

We have unsuccessfully tried to get a new editor for the CARMA Newsletter. We feel that the E-Mail list is the best alternative to a formal Newsletter. This will allow for immediate dissemination of radio news to a majority of out members.

If you are one of the few radio hobbyists without a computer, you can usually get E-mail access for free. Most public libraries have Internet access available, there are Internet cafes, copy shops (such as Kinko's) and other ways to get Internet access. If you have a computer and a modem, all you need to access the CARMA list is a free E-mail account with Juno or HotMail. You will be glad you did!

Instructions to join and use the CARMA Mail List follow the radio news section.

468.3125 Operations, unknown
853.2125 Security
==========

Meeting Notes:

-Ed Sirovy discussed the future of high definition television

He also suggests these as good sources of weather related information:

147.060 Computerized ASCII weather
155.025 ESMARN
442.900 FISHFAR Weather spotters
442.975 FISHFAR Weather spotters
146.925 Weather Spotters

Jim, KB9RGU reports hearing United Airlines flight kitchens working at O'Hare on 461.0125.

Cook County Sheriff's Office raids in Mannheim were recently heard on 154.995. Customs and INS have been active in-the-clear on 165.2375.

O'Hare Ground air traffic control operations have been heard on 118.450, a former Glenview Naval Air Station ground channel. O'Hare has also been using 134.400 for departures, another former NBU frequency.

A member enjoys listening to the Burlington Northern Railroad on their 161.100 channel.

In the Itasca area O'Hare Hangar and Cargo operations have been heard on 154.570. This has been present for as long as anyone at the meeting could remember, and it appears whoever the actual user is they have a high power base set up on the frequency.

Daley's Ambulance in the Franklin Park area is still on lowband, 46.04. Lowband isn't dead yet...

Joel Love reports...

131.425 Aero Services Midway (Monarch, Air Pro, Others...)
472.3625 Airport Express Limo Vans - CSQ output
466.2125 Chgo Hilton Inn Towers simplex
462.1625 Swiss Hotel
468.3125 Midway Rentals

-Air Japan will be expanding their operations at O'Hare, possibly to include a radio base

Steve, WB9ZNL, reports the Salvation Army's Emergency Fire Service Canteens are still active on 461.500. The new Metropolitan Emergency Supply Service (or "MESS", as they are often called on the fireband) appears to have taken a big bite out of Sally's business, especially in the suburbs. Sorry, we don't a have a dispatch freq them, it's thought they are currently using pagers.

VHF Communications Rental Radios:

464.475 CH01 (110.9) Simplex UHF1
464.975 CH02 (110.9) Simplex UHF1

461.8375 CH01 (D423) Simplex UHF2
462.7875 CH02 (D423) Simplex UHF2

151.625 CH01 (114.8) Simplex VHF
151.655 CH02 (114.8) Simplex VHF

Fred Shabec announces a new section on the web page, FOR SALE.

Bret Kolar reports hearing the Hilltop MOA active on 350.350, and IN ANG ops out of Fort Wayne on 139.750.

Watch the July issue of Monitoring Times. At the meeting Bob Parnass demonstrated a 1/4 wave coax stub notch filter. His was set to cut out paging signals on 158.100. The August issue will review the new Sony handheld scanners.

The Chicago Police Marine units continue to use the 800 MHz trunked system for boat to boat communications. Their primary channel is Citywide One. The Mayoral Protection Detail is also now on the trunked system. Currently, the dispatchers for Citywide Two and Four monitor the trunked system at their consoles. If you take a tour of Chicago's Emergency Communications Center you'll see technicians walking around with appear to be 800 MHz trunked radios. They are. And they too are on the trunked system, which explains some pretty cryptic comm-lingo discussions I've heard on their.

John Arendt reported on his trip to the St. Louis area club's (SABRE) picnic and field day. John said their get together featured a number of informative presentations and seminars. The developers of Probe software gave a presentation on going mobile with probe. A commercial river boat

captain gave a talk about monitoring Mississippi river traffic. Other seminars were on fire monitoring and severe weather operations.

On the way back to chi-town John monitored an extensive traffic enforcement detail being run in the Springfield District 9 area on the command post vhf channel, 155.445. He also reports a lot of activity out of Collinsville. John heard what he believed to be split frequency duplex comms on 151.250 / 159.420 while en route. A number of members commented on the recent Labor Day aircraft speed enforcement details on 154.695 in District 2.

Will County Sheriff is currently testing their new 800 MHz trunked system. It's an EDACS system, and the control rotates every 24 Hrs. Our Will County reporter also advises of canal shipping traffic on 217.940.

Pat Lynn reports on his triumphant return from glorious Chula Vista, California. They are on San Diego's trunked system. He heard the local Fire Department going on "rattlesnake responses", which is something we don't get much of here. On the way he stopped in for his World War Two ship's reunion in sunny Las Vegas. He had his Uniden BC3000 with him and reports it getting swamped with pager intermod.

The Lisle Police Department is researching a site for a new building. More to follow...

News flash - Illinois' own Lake County has obtained frequency allocations for a possible future 800 MHz trunked system. Freqs:

866.2500 866.6375 867.1250
866.3000 866.6875 867.7250
867.8125 868.5625

and the additional NIPSPAC 5 Channel Aid band plan.

Don't look for this system to appear next Tuesday. We hear the coffers aren't exactly over flowing.

Six Flags has an Intrac data system operating on 460.6125, 463.3625 and other UHF channels.

Boone County has modified their license for base / mobile operations on 151.355-Base / 159.450 mobile.

West Chicago has purchased 6 new patrol cars equipped with MDT's.

The current cheapest Family Radio Service handhelds from Radio Shack operate on 462.5625.

The Criminal Investigation Division of Internal Revenue Service was heard conducting aero surveillance on 418.175 simplex.

The Chicago Police Department is moving towards a new "311" system for handling non-emergency calls.

Kevin O'Rourke reports hearing a Midway Express shuttle bus service apparently bootlegging on 151.160.

The Vernon Fire Protection District has obtained a license for 100 mobiles on 153.905. This frequency is also used locally by the Cook County Sheriff's Office as Band Six, for car to car simplex communications.

The Goodyear Blimp was in town covering the Bulls playoffs. (How bout dem bulls?). They were heard on 151.625 with a 3A tone and on 465.9625.

At the meeting we got Joe Dimartino to confess he eavesdropped on his local McDonald's restaurant during a huge "Beanie Babies" promotion. He said the staff was getting pretty stressed out. Freqs:

154.600 154.570 469.0125 35.02

Star Plaza in Merrillville, Indiana:
464.375 (D465) Security
464.775 (D465) Maintenance

Gurnee Mill's Bass Pro Shop: 464.825 (162.2) Security

Dave and Ted report hearing pulses on 163.775. These are of varying strength at different times, and appear to have a167.9 Hz PL Tone behind them. They are becoming more active. What is this?

152.270 (151.4) Universal Taxi of Elmhurst
462.5625 (Unk) Heavenly Bodies security
(Our members get around!)
166.4625 Ongoing Treasury Dept aero surveillance's

The Tri-County GMRS group's 462.600 and 462.550 repeaters are history, we are told. No word if they will re-appear (somewhere else???) . There is a move going to have the GMRS licenses be for all 8 repeater pairs, instead of two.

Phil informs us to watch 470.7125 for use by the Chicago Ridge Police Department.

164.550 (103.5) US Secret Service Surveillance
169.950 Simulcasting above
411.350 Hines Hospital Aux. Channel
153.695 Com Ed Truck to Truck, area of 35th & Pulaski

You may want to keep an ear on the Cicero Police Department. They are trying hard to make up for all the political ruckus. 476.7625. The ISP units in Cicero use Cicero's radios but still have access to the trunked system.

Alan Rosewarne gave a nice presentation at the meeting on what he observed at Dayton at the Opto booth. They have a new black box radio called the Optoscanner, which has also been called the Optocom. This is addition to their new Optotracker box.

Does anyone have software to read the EMWIN data on 148.6375

1350 Hrs 384.900 HAPPY51 w/landing report, service write-up problem w/boom

154.025 (114.8) Michigan State Local Gov - Muskegon
153.845 (167.9) Walker City PD Kent County Michigan

157.050 - US Coast Guard group Grand Haven (Michigan) - Working copters (not being heard) all day w/training ops

267.800 - Unknown ANG training ops, dogfights, refueling, etc in progress (who is this? - I hear them all the time)

That's it. The final report. End of shift. Go Home...

Happy Scanning - Ted
==========

6) 154.295 000.0 FG-2 Fireground 2

Look for increased use of the new Tac channels. The several departments also have their own alternate channels, such as PW or old dispatch channels.

The following departments are dispatched by RED:

North Maine FPD Niles FD
Morton Grove FD Glenview FD
Prospect Hts FPD Northbrook FD
Wheeling FD Winnetka (As of Aug 98)

Rich Barnett, publisher of ScannerMaster books, and now of Police Call, speaks on the recent Uniden proposals to the FCC (via TrunkCom):

"I cannot speak for Uniden, but I do think you are missing something critical here."

"Congress has been trying to ban scanners. Certain law enforcement groups have made it known that they wouldn't mind this course of action. The powerful cellular lobby has made its position very well known. The FCC is under pressure to come down hard on this issue. I believe that Uniden is simply trying to save the hobby and the business. If they don't show some cooperation and make some effort to deter people from modifying scanners to receive cellular, they may feel that the entire business will either be outlawed or the FCC will impose restrictions so onerous that it will be impossible for them to make a reasonably priced product. Uniden is not the bad guy here in my opinion.....they are very much the good guy. "

"They are also the only company in the business willing to make the effort to do something about the heavy-handed tactics coming out of Washington. Just look what they did in the case of the legislation last year. It would be nice to see some of the other companies making a buck off this business put their time and money on the line.... particularly companies in Florida and California...they know who they are but they don't do a thing, in either agreeing with Uniden's position or voicing a counter-position, as far as I know. That's what's lame and they should be taken to the mat. "

"I don't mean to ramble on here and I don't want this List to get off on a tangent, but I believe your anger against Uniden, the company that also helped save this hobby with the Trunktracker, is woefully misplaced. "

2160.290
3 160.590
4 160.320
5 161.280

CNW Lines
1 160.890
2 160.455
3 161.040
4 161.175
5 160.575
6 160.485

The CSX/Norfolk Southern take over of Conrail has been approved, and operations should start changing this fall. CSX will get about 45 percent of Conrail's assets, and NS will get the rest. Certian terminal areas, such as Chicago and Detroit will be served by both railroads. The changes in the radio system have not yet been announced.

==========

Highband propagation has been remarkable in late June and early July. Reception of Ohio, eastern Michigan, and northern Indiana has been routine recently.

Low Band skip has also been spectacular. I am working on a "Skip Locator" and hope to have it ready for the August CARMA Meeting.

Look for several area fire and police departments to receive licenses on underutilized business and public safety frequencies. Especially look for trucking, electric utility, and conservation freqs to be allocated to individual departments in the very near future.

850. CARMA Newsletter July 98 3 of 6

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-ya023080000707980009220001@news.theramp.net>
Source record: 153780

Welcome to the electronic CARMA newsletter,
the Official publication of the Chicago Area Radio Monitoring Association.

The following is the instructions to use the new CARMA automated List
Serve. This mail server will automatically take your E-Mailed newsletter
contribution and resend it to the entire subscribed list of CARMA Members.

You may subscribe to receive each message individually or as a compiled
digest. Just read the following instructions, and subscribe as detailed.

Please note that you MUST subscribe EXACTLY as shown below. No one has
been subscribed by us, and only subscribers to the mailing list can post
messages (and receive them).

You should send your contributions to the newsletter as an e-mail message
to the below address:

CARMA@QTH.NET

Note that this is NOT the address you send your commands to control your
subscription. That address is:

MAJORDOMO@QTH.NET

At this time we are no longer accepting renewals or new subscription for
the printed version of the newsletter. Additionally, we are no longer
e-mailing out text versions of the newsletter to individuals. Nor are we
individually mailing out newsletter release or event notices to
individuals. Persons who were receiving the individually e-mailed text
versions will no longer receive them. They have NOT been transferred to
this list. They will have to re-subscribe through majordomo@QTH.NET.

CARMA is a hobbyist organization which supports radio monitoring in the
greater Chicago metropolitan area. A prioritized listing of our traditional
areas of interest:

1. Scanning Public Safety radio operations in the Chicago metro area
2. Monitoring all other radio services in the Chicago metro area
3. Scanning Public Safety throughout the four state area (IL,WI,IN,MI)
4. Worldwide reports from our member's travels
5. Other radio monitoring related articles of general interest
(Equipment, techniques, in-depth articles, trends in radio comm, etc)
6. Conducting tours of facilities of interest to our membership.

CARMA's un-official list of goals as an organization:

a. The sharing and distribution of radio monitoring related information
b. Supporting the hobby of radio monitoring

c. Supporting new comers to the hobby
d. Fighting proposed legislation which adversely impacts the hobby
e. Supporting public safety agencies in their attempts to maintain and improve their radio communications.
f. Improving the public image of the hobby.
g. Improving manufacturers awareness of our needs

Note goal e above. Make no mistake. CARMA fully supports all aspects of Public Safety and Law Enforcement. Many of our members are Law Enforcement Officers, Firefighters, Paramedics and other Public Safety employees. If you are a police or government hater, or if you feel like you cant abide by and support these goals yourself you should not subscribe to the newsletter, attend meetings or otherwise contact us as you won't feel welcome.

In addition, our most gracious host, QTH.NET, has it's own policies with which we must abide by, most of which are already in place in our organization:

1. No profanity. This has generally been a long-standing policy for newsletter editors. It becomes far more important now. This list will be read worldwide. In many countries it's illegal to have profanities stored on a disc. We don't want to land a hobbyist in an Islamic country in prison, or worse.
2. No personal attacks.
3. No flame wars.
4. No commercial advertising or Spam.
5. Avoid beating a continuing thread to death. Once a topic has been replied to five or six times it's likely that everything has already been said that needs saying.
6. No petty nonsense. Actually the way the policy reads it cant appear under #1 above. But you get the idea.

These are QTH.NET's policies and you MUST abide by them or you will be removed from the list.

And... I'm adding a couple of my own...

1. No re-posting or quoting of lengthy previous posts to add 2 lines or less of comments. Just quote the relevant portion of the message you are replying to.
2. In many cases it's better to write to the originator of the message privately as opposed to posting to the list. Unless you have information that is of interest to the group as a whole send a private reply.

Posts appearing on the CARMA newsletter e-mail list represent the views and opinions of the individual author and may not reflect those of CARMA. Individual authors assume any and all liability associated with their posts. CARMA maintains a limited copyright on all of it's publications and it's member's contributions. We strongly encourage our membership to freely distribute our information with other hobbyists. Credit must given to CARMA or the original source and no material may be distributed for profit. It's

okay to charge for reproduction costs.

The current moderator / manager of the list is Ted Moran. He may be reached at:

TandKMoran@AOL.COM

He is serving essentially as a trouble shooter for the system which handles message processing, not as a newsletter editor. This is an automated list. YOU are the person who manages YOUR subscription. Do not write to Ted asking for introductory information, subscription requests, help files, etc. All of this is available through the system itself and should seldom require human intervention. Do write to Ted if your commands are being rejected after trying at least twice or if you are having other serious technical problems with the list.

If you have printed material you wish to contribute you should make some attempt at converting it to a text file stored on disc. Kinko's copy centers have page scanners, computers and helpful staff to guide you in the process at low cost. Many local libraries will do the same for free. Your local library is also a great place to establish a free e-mail account. Just subscribe in the digest form and stop by once a week or so to read, store on disc, or print your messages. Discs with text files can be mailed to the Post Office Box address below and Ted will post it to the list. Printed paper contributions can also be sent to Ted, but will be converted to text and posted to the list only as his time permits.

CARMA
PO BOX 2681
GLENVIEW IL 60091-2681

851. CARMA Newsletter July 98 5 of 6

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-ya023080000707980009330001@news.theramp.net>
Source record: 153781

5. What's a good scanner to buy?

We refer you to the FAQ's and intro files regularly published by Bob Parnass in the REC.RADIO.SCANNER Usenet newsgroup. Which scanner you wish to purchase will probably be dictated by it's frequency coverage Vs. the frequencies used by the services you wish to monitor, as well as your monetary situation. How happy you will be with whatever scanner you buy will largely be dictated by how well you understand what you are listening to, your listening environment, your knowledge of radio systems and other details. It's not so much what scanner you own but how you use it. Bring your questions to this list or to a meeting.

You should own a copy of the Police Call guide, available at Radio Shack. Not only is it an excellent reference but the introductory section is probably the best explanation of how radio systems operate ever written. We are however currently suggesting first time purchasers consider a scanner that employs triple conversion type circuitry. This feature tends to reduce the reception of images and tends to suffer less from interference from high power paging transmitters. The Chicago area is, electrically speaking, a very noisy listening environment. Read the manual that came with your radio again, too. It probably has features you can employ that you haven't yet considered.

6. Why are you guys so nosy? Why are you eavesdropping?

Most people buy scanners to hear what their local emergency services are doing. We represent the hard-core technical enthusiasts. A large percentage of us are not so interested in the details of the conversations as we are in the type of signal or system being received, it's operating details, signal propagation, etc. Essentially, we like to know who's on first base. We map the spectrum. For many of us the most important thing is confirming a licensed (or un-licensed) transmitter as actually using a specific frequency.

7. Is it legal to...

-It is not legal to reveal to another person the details of conversations you monitor, if they would not have been privy to the original message.
-It is not legal to profit from what you monitor.
-It is not legal to listen to cordless phones or cellular phones.

To be more specific, it's illegal to tune into these frequency ranges and listen to services for which they are primarily allocated:

Cellular: Towers: 869.010-894.000 / Mobiles: 824.010 -to- 849.000, 30 kHz Steps

(These frequencies have been deleted from nearly all hobbyist level radios being sold in the United States. Radios made overseas which cover this band can no longer be approved for sale in the United States. Many radios have been confiscated in shipment by the US Customs Service. Hundreds of thousands of older radio which do cover this frequency range are still in use, as are countless older television sets which also tuned this band. Conventional cellular phones offer no degree of voice privacy for their users and their accounts can be easily stolen).

CORDLESS PHONE FREQUENCIES

CH BASE MOBILE
01 43.72 48.76 13 44.40 49.40
02 43.74 48.84 14 44.46 49.46
03 43.82 48.86 15 44.48 49.50
04 43.84 48.92 16 46.61 49.67
05 43.92 49.02 17 46.63 49.845
06 43.96 49.08 18 46.67 49.86
07 44.12 49.10 19 46.71 49.77
08 44.16 49.16 20 46.73 49.875
09 44.18 49.20 21 46.77 49.83
10 44.20 49.24 22 46.83 49.89
11 44.32 49.28 23 46.87 49.93
12 44.36 49.36 24 46.93 49.99
25 46.97 49.97
The above represent the current allocations for 25 Channel lowband cordless phones sold in the United States. This is a recent expansion from a 10 channel band plan, which was expanded from the original 5 channel lowband / 5 channel shortwave phones. These frequencies are still being included in all scanners being sold, but it's illegal to listen to them. The newer 15 channels were taken from inter-city bus transit and forest product services, some of which are still in use. It's unclear whether or not it would be legal to listen for these services, or even to use of these radios! But such is the nature of special interest legislation.

Scrambled low band cordless phones offer a very minimal degree of voice privacy to their users. Don't rely on it.

A similar situation exists for newer 900 MHz cordless phones. While recent legislation would appear to make it illegal to tune into this service, this is an entirely shared band, used by amateur radio, vehicle tracking services, remote control devices and a plethora of low power, short range and spread spectrum devices. Here are a few examples of typical bandplans used by these units. True spread-spectrum, digital 900 MHz phones offer the highest degree of voice privacy available to the typical consumer market, outside of after market encryption devices. These frequencies are still present in all scanners being sold which feature frequency coverage this high.

It should be noted that IS legal to listen to any of these frequencies if you are in the process of attempting to rectify a radio interference situation. It is unclear if it is legal to listen to a station operating on one of these frequencies which is not a service primarily allocated to it.

Example: Motorola has experimental class licensed transmitters in the Chicago area on some cellular frequencies.

Most of these frequencies were banned by the Electronic Communications Privacy Act and it's amendments. PCS services are likely to soon be included in pending legislation. To date, no one has ever been prosecuted under this bill, and the FBI, which has been tasked with it's enforcement pronounced it "un-enforceable".

We include these frequencies in this Frequently Asked Questions file because we believe that our members cannot obey the law unless they know what is illegal.

-It is not legal to listen to studio -to- transmitter links or remote broadcast pickup links used by broadcasters.

It's not certain, but it's thought that service ended up being protected by the Electronic Communications Privacy Act as the result of a mis-understanding. But they are illegal to listen to:

944.000 -to- 952.000

These services also employ other "BA" class allocations. (See Police Call back section). But those frequencies are also used in a variety of other ways by the broadcast services. Engineering, Studio Control, Cues, Camera Techs, Etc. So this ends up as yet another gray area.

-It is not legal to decipher encrypted or encoded radio transmissions.

This appears to mean an attempt to use a descrambling device to listen to a radio conversation being conducted on an encrypted radio transmission, not the mere reception of the signal. Actually the wording of the law is unclear, what a surprise!

-It is not legal to decode paging transmissions.

We have yet to hear any explanation or rationalization for this.

-It is not legal to interfere with Police or Fire agencies.

This could mean transmitting on a public safety frequency or keying up a public safety repeater. But it also includes your presence causing physical interference at an emergency / disaster scene or investigation or surveillance. Or your revealing to one of those non-privy third parties the details of radio traffic which later get back to a subject under investigation. There are a variety of other scenarios which worry us. Use good judgment.

-It is not legal to transmit on frequencies requiring a license for which you do not hold a license.

Self explanatory.

-It is not legal to intentionally interfere with radio communications.

Don't do it.

-It is illegal to violate national security laws.

Be cautious while monitoring sensitive communications, especially federal transmissions. While these matters are not supposed to be discussed on any conventional radio channel you never know what you'll stumble onto.

-It is illegal to use a radio system (repeater, etc) that you are not authorized to use.

Locally, the Cook County States Attorney prosecutes people under "theft of service" laws. Don't steal service from a radio communications service provider.

There are a few gray areas centering around the decoding of digital radio signals.

As far as we are aware it is currently legal everywhere in the State of Illinois to own and operate radio receivers from your home, car or on your person. In the judgment of some law enforcement officers a person operating a scanner from a location other than their home (in public) may represent probable cause for further inquiry, especially if you are acting suspiciously, un-cooperative or there are other influencing factors. We urge you to use good judgment in all situations. In the City of Chicago there is a separate law that you can be charged under if you are using a scanner to aid or assist in the commission of another offense.

Beware of local building ordinances and condo board rules which prohibit setting up outside antennas. If you are already stuck consider trying your building's master antenna TV system for a receive antenna, or employing a hidden antenna. Okay, so we hate these laws. But you shouldn't really break them, either.

IT IS NOT LEGAL TO LISTEN TO CORDLESS OR CELLULAR PHONES ANYWHERE IN THE UNITED STATES.

So please don't ask us to assist you in doing so. We fought hard to prevent the passage of these laws, but they passed anyway. So now we must obey them as a matter of policy. If you want to know how to modify your scanner to receive cellular radiotelephone transmissions try a Yahoo search or post your question to the newsgroups. Please don't ask us on the list. Thanks.

Chicago Area Radio Monitoring Association (CARMA)
http://www.theramp.net/shabec/carma.htm

852. CARMA Newsletter July 98 4 of 6

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-ya023080000707980009270001@news.theramp.net>
Source record: 153782

The CARMA newsletter was formerly a formal written newsletter written by an editor under his editorial control. This is no longer the case. The newsletter has been converted into an automatic e-mail system, and as a result has become totally democratic. It's vital that our local members post their observations to the list in order to maintain the traditional high quality of our publication. Ted is retaining some editorial authority to block messages not conforming to policy and to remove persons who violate policy or whose posts are not in keeping with our goals and policies. Violations will be reviewed by the CARMA board members and handled on a case by case basis.
==========

You control your subscription to this list by send an e-mail messages to the following address:

MAJORDOMO@QTH.NET

(This is the address to send the command to - not the address to use for posting your messages to the list)

You place your command in the body of the e-mail message you are sending. The subject or title section of the your message does not matter. Some of the primary commands are:

subscribe CARMA

(Subscribes you to the list - you then start receiving the individual messages members send into the list. You will receive messages on a continuing basis whenever you are logged on to your service provider's system and as the messages are sent by members. This is the most timely way to subscribe. You may also want to subscribe this way if you plan on using a mail program to store, sort, manage, find, delete, search, etc your received messages.)

unsubscribe CARMA

(Removes you from the list)

subscribe CARMA-digest

(Subscribes you to a digest version of the same messages. Instead of arriving at your e-mail address as individual messages this command sends you a compilation of messages. It arrives as a text file, about 30-50K in size, which you can open using any word processor or text editor. If you want to build a text archive of the messages you'll probably want to subscribe this way. In some instances these digest files will arrive as an attached document to an e-mail containing the first 2K of the digest.

Smaller digest files will likely arrive as a single e-mail message
containing the entire text of the digest).

Note that the digest and individual subscription are distinct and separate.
If you are already subscribed to one and want to switch to the other you
have to unsubscribe from the current version and re-subscribe to the other
version. It is possible to subscribe to both versions if you can think of a
reason why you would want to.

Unsubscribe CARMA-digest

(stops your subscription to the digest version)

Important note:

IF YOU CHANGE YOUR INTERNET SERVICE PROVIDER, OR YOUR E-MAIL ADDRESS,
BEFORE DOING SO YOU MUST UN-SUBSCRIBE FROM WHICHEVER VERSION OF THE LIST
YOU ARE RECEIVING, THEN RE-SUBSCRIBE UNDER YOUR NEW NAME.

IF YOU FAIL TO DO THIS YOUR SUBSCRIPTION IS TERMINATED.

Important note:

You can send messages to the list and commands to majordomo ONLY from the
e-mail address you are using to receive the messages. You cannot send
messages or commands from a different address than the address you use to
receive the list messages.

This is a security feature an will not be over-ridden by the list manager
in most cases. This is very important to remember for those of you with
more than one e-mail identity.

index carma-digest

(This command will generate a list of digest files which are available for
download through the system. It will return a list of files that will look
something like this:

-rw-rw--- 1 majordom 45 14169 Sep 2 18:09 v01.n042

-rw-rw--- 1 majordom 45 18100 Sep 3 11:27 v01.n043

To retrieve one of these files send an e-mail message to majordomo@qth.net.
In the body of the message, type:

get carma-digest v01.n048

The file will be automatically e-mailed to you)

These are the basic commands. For a complete command list send a message to
majordomo@qth.net. In the body of the message type:

help

And send the message. A help file on how to use this system will be
e-mailed to you. If your web browser permits you can view and download many

details of the system and even subscribe / unsubscribe to the list at:

http://www.qth.net

Everyone should have a copy of the majordomo help file. Read it and use it.

Archiving:

Majordomo does it's own archiving. Two types of indexes to the archives are or soon will be available. CONTENTS lists what subject lines are in each archive file. TOPICS lists what archive file contain each subject. Subscribers use the GET command to see files in the archives. Examples:

get CARMA CONTENTS # gets the CONTENTS file
get CARMA.9809 # gets the Sep98 archive

Subscribers can also get a list of file names and dates in the archive by sending an index command. Example:

index CARMA

Archiving will become activated as soon as is possible.

FREQUENTLY ASKED QUESTIONS:

1. When and where is the next meeting?

CARMA holds meetings every other month on Saturdays at area restaurants. Lunch is at noon. We try to vary locations between North and South suburban locations. The meeting starts at 1 PM. You must purchase a lunch as we get the room for free. Meetings usually last about 2 hours. If you are coming be prepared to share some of your locally confirmed information with members present. If you have a lot of information consider copies of a written handout. Attendance has been running 50-100 people. Come join in the fun! Meeting dates and times are announced regularly on this list and on our web site:

http://www.theramp.net/shabec/carma.htm

and on our BBS:

630-852-1292 8/n/1
($15.00/Yr for full membership, guests welcome)

Both of these sites also have back newsletter issues and numerous other files available for download which will be of interest to area hobbyists. Use them.

CARMA also conducts tours of facilities of interest to our membership. Watch the e-mail for announcements of coming tours and how to attend. Informal "Friday nighters" have been conducted in the past.

2. Who or What is CARMA?

We began as a small group of suburban hobbyists who met at area restaurants. Meeting attendance gradually increased over time. For a period

of time we were the Chicago Chapter of the now defunct RCMA. We broke with the RCMA prior to their downfall to retain a greater level of independence. Our 20 year anniversary is approaching. Our previous newsletter have been subscribed to or read by well over 1000 people. Our biggest meeting had 110 people. We also hold an annual picnic (bring your own...) / filed monitoring day.

3. How do I become a CARMA member?

CARMA has no formal membership procedure. If you are reading this, you are a member, welcome to the club.

4. I'm visiting Chicago soon, I just need a few good frequencies to monitor.

8. What is a PL Tone? (AKA CTCSS)

It's a sub-audible tone sent out with the signal. Either as a conventional sine wave or as a digitally coded square wave. There are 38 standard conventional tones. They are used to control repeater access and to prevent the reception of other signals with different or no PL tone operating on the same frequency. See the Police Call introduction for a more in-depth explanation.

Hobbyists can use an radio that is capable of PL receive to help reduce paging interference, to selectively receive a single user of a crowded channel, to better understand how certain types of radio systems operate, to assist with identifying stations and to block the reception of digitally encrypted signals. CARMA has tracked PL tones in the Chicago area and the midwest for over 15 years. We suggest you download our PL list from the web site and import it into a database to see what we are talking about.
You should know that the FCC does not assign PL tones, and tracked them only experimentally for a short period of time any years ago here in the Chicago area. We publish PL tones in the newsletter in this format:

155.595 (107.2) Cook Co Sheriffs Office North Dispatch

\Freq/ \PLTone/ \User/

If you have no idea what this means or don't have a radio or computer interface which offers PL receive as an option you can safely simply ignore the PL numbers and just program the frequency.

9. You guys know everything already. I'm just a beginner. What can I possibly contribute?

Nonsense! Every new member we've run into had something we did not. For one thing, beginners always end up doing a lot of searching around the spectrum, and as a result, usually have come across something that was in a place we don't usually look at. More importantly, just because of your geographic location, where you listen from, what you are hearing is unique. You can hear dozens of low power operations that we cannot. We need your observations! Post them to the list! Do it today! The frequencies, callsigns, activity codes, callsigns, PL tones, channel plans and other details that you have personally confirmed are very important to all of us. Don't be shy! Post today!

10. What kind of computers do you guys use. What kind of files?

Our newsletters, e-mail list and newsletter archives are all plain text files, readable by any word processor program. There is a large core element of true database fanatics in the club and DBF has become our

standard sharing format. You will want a database program capable of importing a DBF file, most will. We plan on posting PDF (Adobe Acrobat Reader) format newsletters on our web site in the future as the need arises. There are both Mac and PC users in the club. Scanstar and Probe are popular among our members for computer aided scanning, along with a variety of shareware packages.

11. Should I put up an outside antenna?

All things being equal, yes. But there are many factors at work with this one. Chicago is a VERY noisy radio environment to listen in / from. Numerous high power broadcasters, hundreds of paging transmitters and thousands of cellular towers make for a lot of interference. Many handheld scanners were engineered to work best with their built in antennas and will get badly overloaded when using an outside antenna. Again, we are currently suggesting a receiver which uses triple conversion circuit design. Putting up an outside antenna can be very dangerous. Don't attempt it if you are not aware of the hazards (electrocution, falls, etc) and know what you are doing (grounding paths, lightning protection, building codes, roof leaks, chimney falls, etc). But the height of the tip of your (or their!) antenna is the biggest overall factor in how far you will be able to reliably receive line of sight signals. Also - the higher the frequency is that you wish to receive the more important good quality coaxial cable becomes. Sometimes the combination of an outside antenna and a device which reduces signal levels can be a wining combination, oddly enough.

12. I can't hear a thing when listening from inside my home. What gives?

Beware of:
Extensive steel beam structures (skyscrapers)
Steel reinforced concrete structures (old buildings)
Foil backed roof and wall insulation (new cheap buildings)

All can reduce or almost totally block radio reception. Your best solution is an outside antenna. Next is some type of window mount. As a last resort trying moving your antenna along inside walls until you find a spot that produces the best reception for a signal of interest.

13. I hear that everything is going digital, why listen?

It's true that most services are progressing towards either digital or other narrow band modes of transmission, and most current receivers cannot be used to listen to these signals. Current legislation would appear to prevent the sale of digital ready radio receivers (scanners) in the United States. We remain hopeful that some compromise will be found. But there are still many thousands of conventional radio services in operation in the Chicago area and will be for many years to come. Software will soon appear on the Internet which will allow a computer user to listen to many different digital modes. Already, mobile data terminals, pagers, fax machines and many other modes of non-voice signals can be decoded. Radio teletype signals have been decoded by hobbyists for over 50 years. As services leave their existing frequencies for newer digital modes new users

appear on the old frequencies. Change is always exciting!

14. What's Simplex / Duplex / Mobile / Trunked / Repeater / Skip?

We defer to the introductory section of Police Call. Read it. Then read it again.

15. You guys / Radio signals / This list is driving me crazy. I'm ready to kill somebody! Who should I scream at?!

Hey pal, lighten up, remember, it's only a hobby...

Happy Scanning!!!

Bill Cheek wrote:

> Yes, most scanners can be retrofitted with CTCSS
> decoding capability.

I'd just like to add that adding CTCSS to an older scanner can be a rather dubious proposition. Many newer scanners, and older Unidens, do have the capability if one opts to purchase the extra-cost CTCSS Decoder PCB. I have a couple of Unidens and find the feature indispensible.

If you can retrofit CTCSS decode to an older scanner that never had it as an option, say a Realistic one you run into the following problems. The decode tone is "fixed". That is to say, you can't have different tones on different channels as you are scanning. There are many different tones plus a whole bunch of DCS (digitally coded squelch) tones that are quite common on busy systems. CTCSS decoders normally don't decode DCS. If the decoder is used to filter out shepherding type background noise (a la systems that carry voice & data) the scan speed will be reduced substabtially.

In my opinion, and others, if you only want to listen to one frequency at a time on your scanner then an aftermarket CTCSS decoder should do you. If you are like me and scan all sorts of things then I would highly recommend that you get a scanner that has this installed as a factory option. I picked up a Uniden 590xlt for 20$ that had it installed already. The radio was broken but 10$ later I was back in business. Many of the newer Uniden scanners offer this option.

Another consideration is using an old commercial radio. These invariably have programmable CTCSS decode and can be picked up for very little moola. You have to know what you're looking for though. But lately I've seen Standard GX3000 radios go for less than 50$. These scan 16+ ch/s with programmable CTCSS. Also, a fella I know picked up two Tait T2015 for 25$/ea. These scan 20 ch/s and have 24 channels. They also decode DCS - and transmit too! That was a super deal. Motorola MCX90/100 radios are trading hands for 50$ lately too.

Just some thoughts.

Cheers!
Andy

875. Pro-39 squelches when plugged in... HELP!!

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: Matt Brummer <matthewb@nishna.net>
Message-ID: <35A245CF.5CFC@nishna.net>
Source record: 153805

Excuse my rough terminology, but here goes...

The Pro-39 works perfectly when run on battery supply.
When plugged into the lighter adapter or AC adapter, it squelches
about once a second and static is heard briefly. (Does the same
whether plugged into the charging port or the power port.)
I got exactly the same results whether the battery pack was in or
while the scanner was externally powered.
My Pro-43 works perfectly when plugged into the same power supply.
I'm guessing something is cooked in the power supply circuits.

Any suggestions??
I've done a few mods, so I hope I can handle the repair myself.

Anyone have a service manual they'd like to glance at for me??

Thanx for your time!! --> Matt

> Who did you buy them from?

Directly from Federal Signal.

> How much do they cost?

Something close to list price, we do not get much of a price break
only making 5-7 dollars on the sale. We were told that even if we
order 40 at once (we might need to soon) we won't get a better
price. It's something like $140, but don't quote me too closely.

> How much do you sell them to the public for?

As I said, about $5-7 more than we buy them for. That may change
soon so we can cover shipping, etc. but we don't see it as a big
money-maker.

> Did you give any
> consideration to the one by either L-Tronics or Reach?

Not sure as the sales started before I did...I just joined this
group in January.

> How do you like them? Are they programmable by a PC or some
> other means?

As far as I know they are programed at the factory. Since I have not
actually seen one yet I don't know how easy that programming is to
alter. I'm told they work extremely well. I know of one large
University (hint, hint: see email address) that is buying them as
quickly as we can get them, about 5-10 a month, and may want to place
a large order soon.

Hope this helps...

877. Kansas Column 0798

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <35A23088.79C8@qni.com>
Source record: 153807

0798

This is the time of the year that I get to use my two favorite hot weather jokes. I cannot take credit for them because they are Johnny Carson lines. The set up for the jokes require one to ask, "How hot is it?" The answers:

#1. It is so hot, I saw a bird pick up a worm with a pot-holder.

#2. It is so hot, I saw a dog chasing a catï¿½and they were both walking.

Now that your eyes are clearing from the many tears of laughter, here is what is up for July.

oops! Johnson County Road & Bridge
1. North Kansas City MO update.
2. Great Mall of the Great Plains, Olatheï¿½the final chapter.
3. Some LTR trunked systems in the KC Metro area.
4. Western Kansas migration to 800 MHz, and Garden City & 800 MHz.
5. Don moves to Harvey County.
6. Bob's stats for KC area Fed Govt freqs. Interesting!
7. More KS State stuff from Bob.
8. Lawrence PD Question
9. Monitor Overland Park's Ericsson system! Wellï¿½sorta.
10. Doyle, e-mail, and the western half of the state's new 800 MHz system

First, an "oops." William sent some information to me several months ago, and I failed to get it in the column. William, I apologize. Here it is:

William sent the radio numbering system for the Johnson County KS Road and Bridge Department. He drives some of the vehicles for them, so he ought to know!
For the snow season, the bosses are:
#07, supervisors are #21
asst. supervisors #18,20,27,33 & 103
The foreman for snow routes (William) is #44 for the Desoto area K-10 HW north and K-7 west
#104 is the Stilwell/Aubrey area
#50 is around Springhill,
#41 cruises 175st to 199st, east of Clare Road
#24 covers (or UNcovers in the case of snow) Gardner Township
#133 McCamish Township

Several small trucks run housing areas in the county. These blade routes are:

#23 Lexington Township
#22 Olathe Township
#136 McCamish Township
#25 Gardner Township
#26 Springhill Township
#37 Aubry & Oxford Township

Again, I'm sorry I missed getting this in the column. Thanks for the information, though.

---

1. One of the Bills sent a note to me about North KC and their new 5 channel 800 MHz system. At first we thought it was going to be a trunked system, but Bill has good info to indicate otherwise. Apparently NKC has been watching what has gone on with Kansas City MO's trouble plagued system, and wants nothing to do with anything with the word "trunk" in it. Word is that the Motorola guy wants to get them to go trunked someday, but for now they are using a 5 frequency conventional system. Here is the channel set-up.

856.7125=Police Dept 1
857.7125=Police Dept 2
858.7125=Fire Dept 2
859.7125=Public Works
860.7125=Fire Dept 1

The fixed end equipment is located at the NKC Hospital, linked to dispatch by a T1 line. They use new Centracom Gold Elite consoles. Bill had one further note about the hardware situation in NKC. The original design incorporated some Ericsson radios connected to the Motorola console to allow them to talk to KCMO. Next thing you know, they wanted some for the cars. The final request by the powers that be was to remove all Ericsson stuff from their consoles. I guess they didn't want the Ericsson "curse" to bleed over to their Motorola equipment. NKC has a few Ericsson radios in some of the cars, but that is the only way they can talk to KCMO.

Thanks for all that info, Bill. We would have had a heck of a time trying to find that pesky data channel!

---

2. One of the Bobs has the scoop on the Great Mall which was mentioned in the last column. It is a low-powered 5 channel LTR system. It has no data channel like Motorola or Ericsson has. The radios themselves are new LTR Motorola S50 series units. Call sign is WPAI705. Here are the frequencies:

861.0875
862.0875
863.0875
864.0875
865.0875

---

3. Speaking of LTR systems, here is a partial list of LTR systems in the KCMO area. Before we get to the actual list, though, we ought to get to know more about that type of system. From what I was told, if the

customer(s) are not homed to a certain frequency, some of the channels can be turned off without the user(s) being aware of it. I heard that Nextel has purchased many of the frequencies, and turn them off in the LTR systems and turn them on again in digital systems. There are commercial LTR decoders available that will allow one to determine what the repeater is being used, and which one is the home channel. I don't know much about radios, and even less about LTR systems, so if anyone has a better and more detailed explanation of how they work, let us know. Now, here is the list:

4. Dale heard some news while at the office about the state's switch to

800 MHz, and wants to pass it along to us. I will simply include a slightly edited version of his e-mail to me rather than rewording it. Here goes.
"ï¿½I guess the towers are being shipped to Russell, Barton and Rush counties. Rush county is actually in the West region so the 800 system is moving fast. I sent in a request the other day to have radios installed in the federal IRS dyed fuel inspectors trucks (Daleï¿½let us know just what a federal IRS dyed fuel inspectors truck is. It sounds interesting. Andy) We work with them quite a bit in the truck checking world, anyway I got a reply back from the Captain that oversees the radio stuff for KHP and he said that 800 would be installed in the west region in less than 2 years. I know there are other towers already up in the central region so they are getting close to completing the tower buildings. I heard it is only taking about 2 days to put up a tower once it arrives on site.
I guess KDOT got the approval to install a fiber line along I-70 from Kansas City to Colorado. Then they will run links of digital microwave off of this fiber line to make a circle around Kansas for the future trunked system. They installed a new digital microwave at Salina when they moved Troop C comms to Marymount. It is capable of 100+ channels and I guess this will be handy for the statewide trunked system."
As usual, Dale has the good poop on the state's ongoing change-over to 800. Thanks. Before we let Dale go, here is a copy of a newspaper article highlighting Garden City and their efforts to buy a trunked radio system. After reading the article I got the impression that Garden City is going about it the correct way. The folks in charge seem to understand what is needed by the City, and what can be expected from a new radio system. Too bad Kansas City, MO can't turn back the clock and go about it the same way!
The article comes from the Friday, June 12 1998 issue of the Garden City Telegram, written by staff writer Scott Rochat.

Title: City approves bid-letting on 'trunk' system.
Upgrade to cos $168,200

The Garden City Commission agreed unanimously Tuesday to prepare to take bids on a proposed new 800 megahertz 'trunk' radio system.
"I've been comfortable with the idea of moving to 800 megahertz," City Manager Bob Halloran said. "It gives 16 different departments real flexibility as to how to operate on a single channel ... this is the kind of system we need."
The vote followed a report by Ben Leader of Leader Telecommunication Consulting Inc. that created specifications, evaluated earlier reports and estimated the cost of a new system based on the city's needs. Leader's estimate totaled approximately $168,200.
"I know we can get that price or less," he said.
Leader and Halloran said they were confident the specifications could be met by any major supplier.
Leader also praised the field test conducted by Dave Reynolds of the city engineering department last April. Reynolds' test checked nearly 300 different locations in Garden City and achieved 96.4 percent

reliability. Ninety-five percent is considered desirable.
"Dave Reynolds' folks went to quite a lot of trouble and achieved very sound results," Leader said.
The proposed 800 MHz system would include one five-channel repeater, 92 mobile units and 63 handheld units. It Would be able to handle five conversations simultaneously, sending a busy signal to a sixth until the line cleared. Should one channel fail, the other four would continue to function normally, with the fifth user then being given a busy signal.
At the city's request, the system would also include a cross-band repeater to communicate with the 159.075 MHz channels used by most emergency services.
A grounded and climate-controlled equipment shelter next to the tower would also be included in the specifications.
"Your equipment works much, much longer if it's kept at a reasonable temperature," Leader said.
All of this represents an improvement over the current 40 MHz system which, according to Leader's report, suffers frequent interference, gets extremely crowded in emergency situations, provides weak coverage in many areas of town and none at all outside a mile radius.
The city prefers a 10-mile radius, which could be easily covered by the new system.
Initially, the system had been proposed to be placed on the water tower at third and Mary streets, but the Wheatland tower on West St. John Street took its place. According to Halloran, Wheatland would no longer be using the tower, making it easier for the city to arrange to use it.
"The Mary Street water tower has a lot of stuff on it already," Halloran added. "We thought we might get better coverage on the Wheatland tower."
Commissioner Tim Cruz had some questions about the system's future viability. "You've commented that these were the needs of the city," Cruz said of the specifications. "Are we going to have to upgrade in five years?"
Leader said that a lot had to do with the Federal Communications Commission and the number of radio users in the areas. With the proposed units, he said, five channels were about as many as the city could get right now and spectrum space was probably only going to get scarcer.
"Generally, the longer you wait, the more difficult it gets," Leader said. Halloran commented later that he didn't feel the system would need to be upgraded immediately.
"In five years, I don't know that that would be appropriate," he said. "In 10 years, probably so - I'm sure there will be different technologies available to us then, or there might be. But an 800 megahertz system is the vehicle we'll do it with."
One minor difficulty came directly out of the city's growth. Initially, the report had proposed putting a number of antennas on the roof of the two-story City Administrative Center to transmit to the tower. But the Law Enforcement Center across the street, after its expansion, will be a four-story structure. Obviously, this would pose transmission

problems. As a result, the antennas would have to be placed on top of the LEC or the fire station instead.
Halloran also wanted to know whether the proposed system would be able to interface with the Motorola console to be put in place after the completion of the LEC expansion in about 2 1/2 years.
"To me, the critical thing is whether or not any of the departments can speak to the law enforcement console when needed," Halloran said. "If it will, this is what we need to do. If not, we may need to back up and start all over again."
"Where the problem's going to be is in that console and what data it requires," Reynolds said. "If it requires a DC remote, that's no problem. If it requires a tone remote, that's no problem. If it requires a Motorola code ... we've got a problem, but there are ways around that."
Leader agreed, saying the need to interface with the new system could be written into the specifications.
Remotes connect directly to the main radio transmitter through DC power or phone lines allowing locations to send or receive that might not otherwise be able to do so. "Think of it as a long microphone cord," Reynolds said.
Commissioner Jim Douglass, who helped discuss many of the technical questions about the system, said that he was pleased with the consultant's work on the specifications.
"I feel a lot more comfortable about this," Douglass said. "This is a lot more well thought-out than just buying a pile of radios and hoping they work."
End of article
---
5. Don, who used to be from Ellis county, now dispatches in Harvey county. Therefore, we now have no excuse for not having a new and accurate profile of the radio systems in that area. During the first few weeks he worked a double fatality house fire. He said it was a rough time. On the surface, it seems like it might be fun to work something like that, but when the reality of what happened sets in it ceases to be enjoyable. A dispatcher likes to critique himself after such calls, and may even be proud of how it got handledï¿½but he never "enjoys" them.
Along those same lines, I was on duty a few months ago when one of our officers had to shoot someone. That person died at the scene. When the yelling on the radio began, the barometric pressure in dispatch dropped suddenly from the collective intake of air as we all gasped, and the cops began running cars off the road, but was it fun?ï¿½not hardly. I was proud of how we all worked together (cops, dispatchers, brass, debriefing team, etc.,) and how smoothly things went, but nothing positive came out of it aside from gaining more experience.
I will now get off the soapbox.
Anyway, Don, start accumulating all the needed info and get it to us.
In a way I envy Don. He now gets to discover the radio systems of a new area. On the other hand, I don't envy him. He has to find a new house, make new friends, find a decent car mechanic, barber, grocery store, AND

go back to training for a while. Yeeccch.! Good luck, Don.
Before we leave Don, he mentioned that in between his duties and house hunting, he did get a chance to confirm a talkgroup for Wichita's trunked system. He found 5424 as OEM-1 (I assume that is Office of Emergency Management) during the grain elevator explosion there. That group and Tac-3 were being used when he was listening.
---
6. The following is from an e-mail another Bob sent to a list-server, and I swiped it for the column. Here it is:

"I recently decided to use the 'count' feature on my Uniden 9000 and check the number of transmissions made in the course of a day by various federal agencies in the Kansas City - Topeka area. I have first run the test with CTCSS engaged. This counted all transmissions made in clear voice and eliminated all transmissions made using digital encryption. The test was run over a 24 hour period from a Thursday noon until Friday noon. Here are the results. They are not really 'statistically significant' as that would require doing the same thing over many days, sampling different months and days of the week. It's just intended to give an idea of relative activity.

165.925 FBI 48 hits
167.3625 FBI 11 hits (all unmodulated carriers)
418.625 DEA 40 hits
418.900 DEA 11 hits
163.200 Marshals 27 hits
163.625 INS 10 hits
418.225 IRS 61 hits
165.375 Secret Serv. 54 hits
165.2875 ATF 0 hits

So not everything is encrypted.

I had the postal inspectors locked out but they typically have some activity on 414.750 and 415.050. The non-CTCSS count will bring up the FBI and DEA dramatically. Conspicuous in its absence is ATF, but they have been experiencing repeater intermod difficulties and need repair."
Thanks, Bob.
Many of you, including me, have computer/scanner combos and/or radios that will count transmissions or other neat functions. Bob has given me the incentive to put all that power to work. I am going to start logging hits, time of greatest activity, and any other information that might be of interest. Right off hand I don't know exactly what to do with all the findings, because I don't know what they are yet. I suggest the rest of you do the same. You never know what tidbits of interest could be discovered.
---
7. Same Bob has some more. I'll just insert the e-mail he sent. Here goes:

"The Topeka (KHP) repeater just west of Lawrence on 868.8625 has been carrying a couple of interesting transmission types lately. First are

short data bursts. These are clearly the 'push button' 10-codes that were mentioned in (the) newsletter a month or two ago. Those transmissions are very brief.
The other interesting development is that the Topeka dispatcher has been reading off locations to various cars on the system in terms of latitude and longitude. 'You are located at latitude 39.xxx.xxx and longitude minus 95.xxx.xxx.' I assume the test vehicles are equipped with some sort of GPS-based radiolocation system that the dispatcher is verifying over the air. I haven't heard the cars on the same repeater, so they may be using the trunked system near Topeka.
I haven't heard either sort of transmission from the Bonner Springs or Olathe transmitters, so it's apparently being tested around Topeka first."
Thanks for the goodies, Bob.

---

8. Rick has a question about Lawrence PD. He is curious about the 800 MHz frequencies for the LPD Detectives and the Crisis Response Team. Rick's sources indicate that they are scrambled. Any ideas? If so, let us know. Rick can be reached at Rjohnson@sunflower.com if you want to send a note to him directly. If you do, please send it to me, too. That way I can get it in the column next month.

---

9. This fact may have slipped through the cracks, but Lenexa PD installed a low power transmitter which re-broadcasts Overland Park's dispatch channel. Try listening to 460.2625. It is only a few watts, and the antenna is about rooftop height, so don't expect to hear it in St. Joseph or Lawrence! We needed a way for our police officers to monitor OP in the police cars, so our radio gurus came up with this solution. Until someone comes up with a TrunkTracker that follows Ericsson radios this might be the only way to listen in. Thanks to Josh for reminding me of this.

---

10. Doyle is now computerized. He and I had been trading info via USPS, but now we can do it much quicker. Not only that, but he can get into all the other good stuff on the "net." Doyle wants to know if anyone has a map of the western section of Kansas that shows all the repeater sites/frequencies for the 800 system. I haven't been able to latch on to one, but I am sure one exists. I have very few contacts with state people out westï¿½so if anyone else knows of someone that can scrounge up a map, do so! I'll poke around here and see what I can come up with. Maybe I can talk to Dr. Sm0ke and talk him into putting the map(s) on his web site. BTW, his site address is http://www.crcltd.com/sm0ke/scanner/

July's column turned out quite good! Thanks to everyone that contributed. I keep thinking that someday we are going to run out of stuff, but it just keeps on coming.

Last, there have been several folks from Missouri that have recently discovered our column. Welcome aboard! Please send us any information you have on systems on the east side of the state line. I can assure

you that what ever you submit will be new to the column. The MO side has been conspiciously absent from the column, and perhaps this will help fill that gap.

See you in August.

Andy

878. Pgh. Area Incident Notification System

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: drickch19d@sgi.net
Message-ID: <35a33307.40133036@news.sgi.net>
Source record: 153808
Cross-posted to: pgh.general,rec.radio.scanner,alt.radio.scanner

I am looking to gauge the interest of Pgh. area monitors for an incident notification system.

Many other areas have a system similar to this, which uses alpha pagers to send pages with information on major incidents in the area.

Is there interest in this type of system?

What type of assistance could you provide? Could you monitor a particular agency like LifeFlight/Stat etc. on a regular basis and page information?

At this time you would need to HAVE an alpha pager ALREADY. In the future should interest warrant one system would be developed similar to the other systems in existence.

Please note this would not just be a "fire system," but a MAJOR INCIDENT system!

Major Incidents:

Accidents with entrapments/death
Shootings
MedEvac Scene Runs
Major WX Alerts
Working Structure Fires
Haz Mat Incidents with spills, leaks, dangerous situations
etc.

Comments?

880. BC235 attenuator/sensitivity problems

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: Mike Fairleigh <mikef@sky.net>
Message-ID: <GKso1.1$Y4.98950@alpha.sky.net>
Source record: 153810
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'd like to thank Andrew Clegg for his posting of 6/30/98 in which he explained the "ATT" addition to the BC235XLT. I've owned this radio for about 3 months and was about to pack it up and ship it to Uniden to be checked/repaired (and be without it for a month), due to its demonstrably poor reception. Over the 3 months I've owned it, I've kept a log of frequencies the radio would not receive, while my old BC100XL sitting next to it would get them perfectly clear. The last straw occurred about a week ago when our area had a number of tornado warnings. When the sirens sounded, the 235 was close at hand and was already tuned to NOAA. It went with me as I and the rest of the family headed for the basement. As we went down the stairs, it lost the NOAA signal. I was more furious about the radio's performance than I was concerned about the weather.

Like Andrew's, my 235's documentation says absolutely *nothing* about the ATT function, and so I'd never even noticed it on the keypad. Now that I'm aware of it, the radio seems to be working much closer to my expectations (and NOAA comes in loud and clear in the basement). The jury is still out on whether it's getting everything the old 100XL does, but first tests appear positive. Cheers to Andrew for noticing this feature and letting the rest of us know about it. Jeers to Uniden for not shipping an accurate manual with their radio.

This one isn't new. Peter J. Boe of tvine@teleport.com
is one of the early sickos on this newsgroup going
back three years or more. He has NEVER posted a scanner
article, but until a few months ago, he was very prolific
as a hatemonger and nasty kibitzer. Then he went
"incognito" and tried to come back even nastier as
"Bud Powell". He made stupid mistakes and got caught
right off.

So he went "incognito" again....and finally emerged as
a slightly smarter "Stuart Upton". But not smart
enough. Anyway, this guy is REALLY sick. We don't
call him "Prozac Pete" for nothing. He was seen in
the psychology newsgroups reporting on his experiences
with Prozac, Depo Provera, and other looney tunes drugs.

Here, he is one vicious, nasty sonofagun. Worthless.
No socially redeeming value at all. As far as anyone
can tell, Boe has no interest in radio, period.

> Why does this newsgroup attract so many losers ???

IT'S NOT THE NEWSGROUP! It's been endemic to radio
IN GENERAL since the mid-70's when CB Radio boomed and
then busted in 1981. The trucking scene adopted CB
like cowboys did horses, and it went downhill fast.
Before the truckers, CB was a tight-knit, fun-loving
crowd. Lots of local clubs and local gatherings. FUN!

Then came the truckers. They weren't so bad, but with
them came the groupies, the craze, the "scene". THAT
is what wrecked CB Radio by 1981. And the market crashed.

But in that time frame when CB was king, hordes of
CB'ers went on to become hams....some of them, the

groupies, truckers, fadists, and such.....

Their style invaded amateur radio, much to the chagrin of the oldtimers. Monstrous turf battles started on the HF bands that continue to this day. Gone were the days of "friendly" radio..... with exception of SWL and scanning....which, by nature, are very passive aspects of radio....monitoring-only, you see.

SWL and scanning remained pleasant and prosperous up through about 1990 or so. Until that time, the primary means for SWL's and scannists to interact was...well, there wasn't a primary means. CLub activities were it, I guess....unless you count the magazines and Letters To The Editors. Most clubs were local, and consisted of a few dozen members, at most. And meetings over pizza and beer hardly promoted strife. To he contrary, personal gatherings usually promote good times and good vibes.

The RCMA was the largest and most successful of the "mail order" clubs... it grew from nothing in the 70's (I think) to huge proportions by the mid-late 1980's. But by 1991, the "sickness" hit it, too, and it's now history that the RCMA went down the tubes a couple of years ago. RCMA had a lot of internal strife, but I'd peg their demise due to outside factors more than internal conflict. Subscriptions dropped.

The rise of on-line networking, including the Internet, has steadily replaced radio as a primary leisure pursuit. Readership of all the printed media is way down, books, magazines, etc. SO the big clubs, like RCMA, that depended on sales of a monthly periodical, are either gone or are hurting pretty bad.

The singularly unique thing that happened in about 1990-91 wasn't an "event" so much as it was the birth of a phenomenon....passive radioists were getting connected ON-LINE and were able to talk in near-real-time like hams and CB'ers.

Well.....in that group coming on line were scannists and SWLs,some of whom also happened to be CB'ers, hams, and no affiliation at all. The on-line group did not consist of purely fun-loving, amicable scannists and Shortwavists. There were some rotten apples.....

At first, (1990-93), no one noticed this "sickness" because the Internet hadn't yet risen into prominence. ON-LINE connections were primarily via BBS's and the BBS networks of FidoNet, RimeNet, and a few others.

They worked a lot the same way as the Newsgroups now,
but efficiency was lower and the numbers were fewer.
And....BBS networks were rigidly controlled by not
only the SysOps, but Moderators, as well......

Significant, though, Hobby Radio was NEVER an
avant-garde player on the computer scene. Hobby
Radio has been dragged kicking and screaming into
the Information Age.

So up to about 1991, computers and radio just didn't
mix, despite that cultist-elite hams had been doing
packet radio since the late 70's. By and large,
radioists were computer illiterate.....and STILL ARE
when you get right down to it. That's why the likes
of Boe and that ilk proliferate....they can pull
their crap with relative immunity and impunity
because they know more of computers and the Internet
than the casual "Joe" and no one knows how to stop them.

I use the term "no one" loosely. We are here for
scanners and scanning. Computers are incidental,
except that computerized radio and monitoring data
signals are rising into prominence, and "we" are
becoming more literate....at last. But most people
still "see a post from Joe Bloe" and can 'tconceive
that it might be from Peter J. Boe. Never mind the
sicko under cover. And there are a lot of them.....

It's abundantly clear there are plenty of participants
on this newsgroup who have no interest in radio.

> At least this one has been found out to be a
> forger and we know who he is. This problem should
> be rather easy to cure.

Maybe. Maybe not. ISP's traditionally protected
their customers. Until recently, TELEPORT.COM
seemed very unresponsive to complaints. That
may be changing - we'll see. But with the Usenet
a virtual anarchy, it is not reasonable to hope for
much in the way of a "cure" without government
intervention.

Aside from that, potential cures rests partly
in peer pressure....which hardly ever works on
a newsgroup, and pure force....as leveraged by
an ISP who is tired of abuses of their resources.

The best cure of all resides in the individual and
control of his own computer. But again, not many
in the radio crowd know how to employ and deploy
that power and capability. Instead, they look to

the outside for a cure.

And eventually, that means government intervention.

And we KNOW where that will go.

Sorry for the verbosity, but your comments begged
for a little injection of history and reminiscing.

BC-350a mobile scanner,

Recieves on:
29- 54mhz FM
108-137mhz AM
137-174mhz FM
406-512mhz FM

This little guy has ootles of built on search freqs for
you to find those new and local freqs fast. Great for those who
don't know what the police are using.
Dosen't do trucked, dosen't do 800mhz, and dosen't do
cell, but it's still a great little thing to start out with.
Has 50 user selectable memories in three banks plus 100
pre programmed freqs in 5 banks that are built into the rom.
"Private" bank holds 20 user selectable freqs, "Police" bank
holds 20 user selectable freqs and has a bunch of pre-set freqs
that can be locked out, "Fire/Emg" bank holds 10 user selectable
freqs and has has a bunch of pre-set freqs that can be locked
out, "WX" bank does all weather freqs, and "Air" scans the entire
aero band.
Unit uses a mounting bracket, which was lost by the
previous owner. Not included. No manual, but I can instruct on
how to program it. Runs off of 12v DC, power supply not included,
but power cable for opertaion in the car is.
Basically, just the unit itself and the power cable for
car operation. But it'd be a great little thing to keep out in
the car or truck.

It works just fine and has no problems.

Asking $45 plus shipping, or best offer.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I picked it up to put it in my car, but
never got around to doing it. I need the money more than I need
the hobby.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,
tdragonn@blarg.net

> rather dubious proposition. ..... Just some thoughts.

I think we're not at odds anywhere aside from
the word, "dubious". The cost is low and the
functionality of add-on CTCSS is great. The
cost of a CTCSS-designed scanner is a lot
more than the retrofit.

True, add-on CTCSS pretty much relegates you
to the use of one tone at a time. But that
covers a high percentage of scanning situations
where most of the time, you want to "hear all
there is to hear" and CTCSS is counterproductive
to that goal.

As I see it, CTCSS is most effective on shared
frequencies where you want to hear ONE user or
group of users to the exclusion of all others.
Bingo! Add-on CTCSS is worth its weight in gold.

I don't see much sense in employing CTCSS for
public safety and local government frequencies
since everyone is on the same tone anyway. Again,
shared channels is where it's at.

As for DCS/DPL, you can add-on decoders there, too.
Not at all expensive.

Many people aren't into mods, and so for them
the way to go is a dedicated CTCSS scanner, if
that's what they want to make scanning life
easier and better. Considering that CTCSS doesn't
come on the best scanners, it's a tough thing for

me to reconcile stepping down to get CTCSS built in.

For those who don't need the best, I'd have
no quibble at all. Six of one; half dozen of
the other.

886. What is the law reguarding Cell frequencies

Newsgroup: rec.radio.scanner
Date: 1998-07-07 00:00:00 UTC
From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <#dPWJ0cq9GA.166@ntawwabp.compuserve.com>
Source record: 153816

"Gary Foreman" <gforeman@adelphia.net> asked:
> I have a Bearcat 200XLT that was sold before they removed the Cellular
> frequencies. Is there any law restricting it's use?

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a short dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

Message-ID: <HDQo1.20$Y4.918692@alpha.sky.net>
Source record: 153523
Cross-posted to: rec.radio.scanner,alt.radio.scanner

To all those who have requested more info on the "ATT" function which at some point has been added to the 235, I point you to Andrew Clegg's original post. In Deja News, search on "BC235 now has attenuator". (Sorry, every time I try to include a link to a DN article, it doesn't work.)

My unit's serial number is 75036260 and it has the attenuator. One respondent indicated that his unit, no. 75001886, does not have the attenuator. Perhaps those of you with 235's can reply to this with your s/n and we can try to pin down when this change began. I'll be happy to keep a log of them and post the results.

BTW, an additional jeer to Uniden for not suggesting this as the possible cause, either of the 2 times I called them regarding the poor reception. In at least one of those calls, they asked for the s/n, so they should have been able to tell it has the attenuator function.

Hello everyone, quick question. I keep seeing people posting the 900mhz cordless phone frequencies, and it got me interested, so I went and dialed the weather service on my panasonic phone and tried to pick up the broadcast. When I scanned the 902mhz range I got the base, and of course around 927 or something I got the handset. When I heard the base, I could hear both ends of the conversation, however the handset only acted as a microphone more or less. I am wondering, why is it that many people are so keen on listing the handset ferequencies? Isn't the handset more or less useless to monitor if u can pick up the base? This is probably a stupid question with a really easy answer, I was just wondering.

Thanks in advance for all responses.

>But the old urges are surfacing again..... and
>I'm getting hives over it...

How many days has it been since Cheek announced that he was unilaterally going to cease and desist from bashing Mackey, and was not going to even refer to him again? Hmmm.... Looks like about three days or so. Back on July 5, we read this from Cheek to Mackey:

==========
>1. I will not communicate to you.
>2. I will not communicate about you.
>3. I will not make references to or
> insinuations about you.
>4. I will not think about you or even
> recognize your existence. (You are
> about to wink OUT of existence.)
==========

And now we see just how sincere he really was, don't we? Is there still any rational person out there who can't see who's the real agitator around here? The record speaks for itself, folks.

Is MAlexander claiming I've never posted an on-topic message in three
years here? If so, he's a liar. Not that this surprises me. Many of
Cheek's sycophants echo his lies without bothering to check them for
accuracy.

Dale--

My 235XLT that I just received last week now has an ATT function above the decimal point. While scanning, pressing the decimal key activates an attenuator. The function is not programmable by channel. It is just on or off.

My favorite is the drug dealer's pager's PIN numbers. With the
telephone number and the PIN you can access the pager voice mail and
change the greeting among other things, like maybe change the PIN
before you change the greeting.

Mike,

For your information my BC235 has a serial # of 75021710 and does not have the attenuator. That narrows things down a bit.

Ken

Ummm im looking at my 325 right now... and dont see one.. i forgot what
the rest of the thread said about the att... but is there a obvious
button that says att on it? or is it some kinda keyboard trick.. i dont
have an att key on the keyboard...

$199 with the in ad coupon.
Radio Shack employee did mention the Pro-90 was Bearcat (Uniden).

Greetings;

I am looking for anyone who might have a schematic diagram for a Tennelec Memoryscan MS-2 scanner. Please let me know if you can help. I would also be interested in parts units working or not.

Thankyou very much!!!

Jack:

Take a look at Southwest Frequency Directory's NEVADA Edition. Online at
http://www.azstarnet.com/~danr
SWFD Nevada can also be purchased at Fox's Spy Outlet in Las Vegas or
mail order through Fox's or SWFD directly.

Dan

The problem with legislators is that they have no knowledge of what
they regulate.There should be recourse
directly on them for what they do.

>started 2 months ago.

Actually Mackey has tried to control the newsgroup for a couple of years (at least). Of course what is ludicrous is that he is utterly out of control. In recent months he has gone so completely bezerk with his impersonations, personal vendettas, forgeries, rogue cancellations and his other sordid activities that I finally put ran him through the bozo filter. Now, I get to point out his many shortcomings without ever having to read anything he posts! Is this a great country or what?

>here I got me the Mother of All Twit Filters, that can filter not only by author, but by >subject line; reply threads; and even key words and phrases in the text, and now >there ain't a dang thing to read.

Steady, Bill. Take a deep breath. Better now? :)

I've also noticed the "quiet" since invoking my snot filters, but find myself spending more time reading the scanner-related posts. I think it'll just take a few days to get totally "in the groove" and get used to the change of pace and get the old gray matter focused back totally on scanning. Besides, I'm getting ready to finish building and installing my HB-232, so I'll have LOTS more questions, I'm sure.

Hey, I quit smoking almost a year ago. I figure it'll be like that was. The cravings will go away in a little while, and breathing will get a lot easier. Besides, ain't it nice not to read a bunch of her stupid, asinine, inane, dumbass posts every day?

Yup! And they're not that hard to find. Tow Truck maggots like to jettision scanners for next to nothing too! (That's where one of mine came from).

> I don't know anything about the "Ferritronics"

If your interface offers 22 bits of output, could you use this to "fake" the DIP switches of a CTCSS decoder? That way you could have different CTCSS on each channel.

> <Gack!> Okay, I've heard about you guys.

> BEEEEEEEEEEEEEEEEEEEEEEP tone was present.

I don't know that it was anti-scanner with regards to the Metro Police. It was an old VHF system that was originally supposed to offer the benefits of Trunking. From what I'm told, the collective system never did work properly! The shepherding tones were kinda useful. They turned the "CALL" light on inside the car and the mobiles would transmit back an ANI to the dispatch centre. Metro eventually ended up putting a 110.9Hz CTCSS on the system. I suspect after all the old radios finally broke and there became no equivalent replacements.

> WiNRADiO has software that will decode and display
> any CTCSS tones present on the carrier, but it

Hmmmm...sounds like an easy fix for a firmware programmer. 8-)

This fits into my theory of the dwindling middle class in North America. But, that's off-topic so we won't go down that road.

> I know both Radio Schloque and Uniden are
> aggressively ANTI-MODIFICATION, and it ain't
> just cellular that chaps their hides. But
> neither are going to give us so much as an

Well, many of the new scanners have all the old "mods" built in. Faster scan speeds, S-meters, Alpha displays, more memory, computer interface etc. The need to mod' is becoming lesser.

> Which is understandable. But why close the door
> to homebrew improvements? And then lower the
> overall quality of the receiver engines? You
> know, the RF Amp, Mixers, PLL/VCO's, IF's....

Well, I don't know that the RF circuitry is any worse. The old scanners sucked up more noise than the newer ones, from what I've seen. Rx can be reworked to improve performance. I've done it myself.

> The current crop of scanners have some magnasty
> noisy PLLs and mixers....

Well, the PLL noise issue I'll go along with. As an unfortunate side-effect of decreasing the lock time of a PLL, the noise will go up. It's unaviodable. The market has demanded 50+ Ch/s scanning. You can't have your cake and eat it too. Of course, the way to get around this is to have multiple synth's in your radio and pre-load them! But that would drive up build cost and we can't have that, can we? 8-)

> And no wonder....the trend is to pack everything
> into firmware and as little as possible into
> hardware. Much cheaper that way. And they can
> still soak us for all that sizzle without having
> to supply much steak.

Well I think that the radio companies do it more to increase their bottom line (and the executive bonuses) than the quality of their products. (Which also fits well with my middle-class theory! 8-D) Hahah!

This is the way "hi tech" things are going. Look at Win95/98. Comparing them to the old DOS based machines is unbelievable - whether or not new is better and more productive is conjecture. Try buying a Porsche without an automatic tranny. Try buying any car without a stick

shift! Sigh.....

Yes. But keep in mind I've never, ever seen a schematic of a PRO2004/5/6. I am going on the assumption it's like every other multi-band receiver and uses a downconvertor for the high bands. The convertor mixes the Rx'vd signal with another. This other signal could be fixed or variable (especially if balanced mixers are used). The circuitry that generates the frequency to be mixed thereto is off frequency or incorporates some kind of filtering that is mal-tuned, or drifting. You can see this stuff easily with a sweep generator or by other "creative" methods. If its a variable one and uses the same reference as the primary PLL, I would poke around in that area. These are all guesses, BTW. There could be a defective phase comparator in the PLL that drives this oscillator. It's even conceivable that the loop filter is out of whack (although I would imagine less likely). Yet again, I've seen jitter/ringing cause this problem. You need a good 'scope to see this stuff but it's often there! Tell me more about the circuit or fax it to me and I'll tell you something more intelligent.

Cheers!
Andy

Ah, but it IS that simple. The original poster was asking what happens when
you DIRECTLY CONNECT (yes, withOUT a transformer) two antennas.

Source record: 153587
Cross-posted to: alt.radio.scanner,rec.radio.scanner

To those of you who would rather not have to deal with the daily flames between Mr. Mackey
and Mr. Cheek I would encourage you to enable your news group filters available in your news
reader program. I am confident that both individuals have good information to impart to others like myself who are not experts at scanning, radio communications, computers or any number of other topics. However, their unwillingness to confine their postings to scanning, and their eagerness to utilize these news groups to flame each other have prompted me to filter them out of my downloaded headers.

There are already 2 other news groups dedicated to them.
alt.fan. john mackey and alt.fan. bill cheek. I would encourage them to start another news group. Perhaps the mackey cheek slugfest news group and leave the radio scanner news groups to radio scanning topics.

For those of you who use Outlook Express and are not familiar with your news group filters the following may be of some assistance to you. At the upper left of your browser click on Tools,
click on News group filters, click on Add.... The rest should be self explanatory.

For those who use other news group readers, most have some type of filter options usually under the heading of tools or options.

The news group filters I have activated work very well. Only a very few postings pertaining
to the Mackey, Cheek wars get through, and I can live with that.

My thanks to Dave k4cc who mentioned news group filters in one of his postings and prompted me to investigate the same.

As far as Mr. Mackey and Mr. Cheek are concerned. I wish them well, I just wish they would take their fight somewhere else.

> daily beatings?

Well, there is an old joke....."What does a
sadist do to a masochist?"

ANS: Nothing ;-)

Maybe ol' what's-its-face is now enjoying itself?
I mean the pain is what it wants, right? So my
turning out its lights has got to be painful,
and therefore a pleasure....probably orgasmic.
I dunno. But this morning a whacked the living
shit out of a big ol' la cucaracha....first time I've
done something like that in years. Lately I've
been letting things live and die on their own.
But the old urges are surfacing again..... and
I'm getting hives over it...

> >Dang! Look, we're gonna have to start talking scanners and scanning; else I'm
> >gonna take me a memory pill so's I can recollect whoever it was that I was
> >addicted to hosing down several times a day whether she needed it or not.

> Hey, I quit smoking almost a year ago.

Gawd....that's next on my list. I quit
about 30 times a day, but always start
up again. No stomach for pain here.....

> I figure it'll be like that was. The
> cravings will go away in a little while, and breathing will get a lot easier.
> Besides, ain't it nice not to read a bunch of her stupid, asinine, inane,
> dumbass posts every day?

I ferget which "she" you're talking about, but
I never did appreciate stupidity, asinineness,
inaneness, dumbassness, and such. But there
hasn't been much to replace it yet. A few
FOR SALES which don't interest me; a few
WHICH IS THE BEST SCANNER 's, but to answer
those always starts a peeing contest by those
who wear their beloved scanners as prosthetics
for various diminutive or missing members of
their bodies.

So I dunno, man, I feel a depression setting in.
Just this morning, the good woman says to me
about something that made me clench my jaws;
she says, "Patience, love muffin!" And I popped
right back with, "Patience my ass, I am going
to take something's head off and shit down its
neck. Is that patience enough for you?"

She says, "Now, now, honey bunch....let's go
relieve some of that excess testosterone..."

Well that was all fine and dandy...I'm okay
again for a while. But a body can't spend
ALL DAY relieving excess testosterone.....

But anyway.....I feel like a fish swimming
through new-plowed ground.....and like

Wile E. Coyote who leaps off a cliff thinking
he is a bird and then 50-feet out discovers
that it just ain't so..... Or like I'm giving
a speech to the San Diego Cultural Society
and somebody out in the audience hollers that
my fly is open.....

I'm telling you this is a very traumatic crisis.

;-)

961. DFW Scan Radio IRC

Newsgroup: rec.radio.scanner
Date: 1998-07-08 00:00:00 UTC
From: Barry Adair <barry.adair@worldnet.att.net>
Message-ID: <6o09jo$bkv@bgtnsc03.worldnet.att.net>
Source record: 153593

This is a copy of the FAQ for DFW IRC Channels

As most on you know we have started 3 channels on DALNET irc, #dfwscan, #dfwscanclub, and #dfweather, I am not much of a writer so this is an attempt, at a FAQ for these channels.

#dfwscan
#dfwscan is setup so anyone can go to DALNET and join the #dfwscan room at any time, if no one is there hank around, it has been getting more and more users, this room is our general discussion channel, there will be 4 ops for this channel but an ops does not have to be in the room for anyone to logon, I would like to see members of this room comduct themselves in a respectful manner, not like other IRC channels I have seen, discussion should be mainly scanradio, but this is not a strict requirement, you will not be kicked for getting off topic, in this room anyone is welcome, scanner owners or not, just an open channel, for anyone wanting to join. In case this get got of hand the ops can and will kick people, or even ban them from using this channel.

#dfwscanclub
This Channel is for the purpose of maybe getting a Dallas-Fort Worth Scan Radio Club started, we have the dfwscan-l, and the IRC channels, this affords us some powerful tools in setting up and maintaining a DFW Scan Club, discussion on this channel should be on this topic, and remain close to this topic, those straying to far off topic will be kicked, and after a few kicks the ops can and will ban users, we are going to start with 4 ops in this channel but more will be added as we get users from other parts of the area we now have members of the DFW Scan Radio ICQ list from all around the metroplex, so to cover the complete area I thinks we need ops from all areas.

#dfweather
This channel is INVITE only, this is for Dallas Fort Worth Area Weather ONLY, to logon to this channel you will have to logon to #dfwscan and ask the #dfweather ops to invite you to this channel, this is to keep people from other areas giving us the weather in our area, the ops can and will kick and ban from this channel, only DFW area weather it to be discussed in this channel and this will be strickly enforced, we have 2 other channels for other discussions, if you need to tell your friend about your new scanner, do it in #dfwscan, not #dfweather, this channel needs ops from all areas of the metroplex, but we also need ops that will be firm in enforcing the rules of this channel, I may as the need arises take the invite only off and make it a op only channel, this way anyone wanting to get on this channel will have to be an op, the reason for this is that we are going to try to get Skywarn training for this channel, and if we do not enforce it

from the start by the time we get Skywarn it will be out of control, so enjoy but obey the standards of this channel.

DFW Scan Radio ICQ
This list was started so we could meet and exchange messages about scanners, and anything else we want to talk about this is more or less private comms. so what you discuss is between the partys involved there are basically no rules for this, ICQ offers transferring of messages, files it also has private chat and much more, I have the DFW Scan Radio ICQ List Page on my web site but I do not have control over the comms that occur, if you think someone is misusing the List please inform me and I may remove this person from the list, so far I have not had any complaint from any user about any other user.
The DFW Scan Radio ICQ List is located at http://members.tripod.com/~B_Adair, if anyone wishes to join the list please ICQ me at ICQ #5645613, this is the best way for me, but you could send me e-mail at barry.adair@worldnet.att.net, also if you need to talk to me ICQ me or e-mail me and I will give you my phone number, if you are out of Tarrant county I do have an 1-800 Number that you can call.

If there is a interest in starting a Dallas-Fort Worth Scan Radio Club, we need to get started, I think that we will need at least 2 chapters because of the area covered, may be a Dallas County, and A Tarrant County chapter, so far we do not have many members from Denton County, but I think this will change.
If anyone wants to have coffee about any Saturday morning at 8:00, I am at the Waffle House on Randall Mill Road and 820 in Fort Worth, if you decide to come by let me know and I will tell you what I will be wareing so you can spot me, also if you have a problem finding the WH, I can give you my moblie number to help ypu get there.

Any ideas ICQ me or e-mail me
Thanks Barry

> came from).

Hmmmmmm, that's a hell of a source. Those guys
certainly would use scanners like a mechanic uses
a wrench. heh heh heh.... Never thought of that
source before. I'm always asked by people where
they can get used scanners. So how would they
approach this resource? Call up towing companies
and ask....or just catch the drivers here and there?

> > I don't know anything about the "Ferritronics"

> If your interface offers 22 bits of output, could you use this to "fake"
> the DIP switches of a CTCSS decoder? That way you could have different
> CTCSS on each channel.

YES! The Communications Specialists decoders use
a DIP switch bank to apply logic highs and lows to
the decoder chip. I think they're normally pulled
high, and the switches take various pins low.

But yes, the CE-232 offers 8 individually addressable
logic output bits that can be controlled from a
running script.

Ex: IF freq = 463.8500 then OutByte = 00110110

Thus if the last 6 bits are piped to a 64-tone
decoder, then the CE-232's OutByte function can
turn on or off any one of them. The CE-232 also

offers four generic CMOS toggle switches that
can be used for that purpose. And of course, those
four switches can drive a binary decoder to produce
sixteen logic outputs. So there are several ways
this can be done. There are another 14 bits of
generic Logic Input ports that can be used to
gather the status of various points in the scanner
or external devices so as to keep a real-time
track of what's what, and IF-THEN-ELSE logic can
be used to make decisions based on those INPUTS.

In other words, an output can be configured based
on a specific input. Possibilities are limitless.

> I don't know that it was anti-scanner with regards to the Metro Police.

The guys up there always swore it was......but
yeah, I catch your drift.

> > WiNRADiO has software that will decode and display
> > any CTCSS tones present on the carrier, but it
> > doesn't use CTCSS to keep the receiver squelched.
>
> Hmmmm...sounds like an easy fix for a firmware programmer. 8-)

Well, I guess so! And maybe easier than at
first glance. WiNRADiO can be controlled by
DDE and NetDDE, too. Interesting possibilities.

> > Of course, cars went down that pipe from their

> America. But, that's off-topic so we won't go down that road.

My theory, too. All suppressed nations have two
classes: upper and lower. And the upper rules.
The lower just gets lower..... And history relates
that no free society remains free for very long.
Ours holds some kind of record already, so it's a
matter of time before the "Iluminati" have their way.

> > I know both Radio Schloque and Uniden are

> etc. The need to mod' is becoming lesser.

My exception to that is most of what you related
is based on firmware, not hardware. Firmware and
software produce states of mind more than hard
reality. I know....it is a perceptual thing, but
still....I prefer hardware solutions over software
whenever push comes to shove.

> > Which is understandable. But why close the door

> be reworked to improve performance. I've done it myself.

Me, too. But the PRO-2004/5/6 series and to a lesser
extent, the PRO-2035 and PRO-2042 were the most
qualitative scanners of all time in terms of hardware
to produce maximum results. It's pretty hard to
retrofit a brand-x scanner to even come close, much
less equal the performance of those classics.

> > The current crop of scanners have some magnasty
> > noisy PLLs and mixers....

> Well, the PLL noise issue I'll go along with. As an unfortunate

> have your cake and eat it too.

Ohhhh, I'm not too sure about that. I think the
technology exists..... look at what QUALCOMM,
Motorola, Ericsson, and others are doing in the
cellular and PCS receivers. And we're talking
on a few square millimeters as opposed to a few
square inches of scanners....... But why that
technology hasn't filtered down to scanners
probably poses some interesting questions and
answers. I don't think economics is a factor,
though. Cellular phones are cheap!

> Of course, the way to get around this is
> to have multiple synth's in your radio and pre-load them! But that
> would drive up build cost and we can't have that, can we? 8-)

Oh. Well....mass production always drives costs
down. What about these $1000+ radios? They're
not any better in that department. So I don't
think the scanner manufacturers do much talking
to the avant-garde developers or even to the
academic world. Seems like they're cloistered
off by themselves somewhere.......

Sick! Sick! Sick!

> Look at Win95/98. Comparing them to the old DOS based
> machines is unbelievable - whether or not new is better
> and more productive is conjecture.

Whooooa.... we diverge. :-) Win95/98/NT are....
well....among the things I know pretty well.
I've been a beta tester since the early days
of "Chicago"....and I mean early. And I have
no remorse at all for the decline of MS-DOS,
even though I agree that it still has its place.
But then MS-DOS still exists in Win95/98 for
those who need and want it. And a clone of it
resides within NT.

I think there is no question that Win95 ushered
in the Information Age by making it easier for
people to compute and to connect, but at the same
time, offering more power to the power users and
retaining almost all of the old underpinnings for
those who can take advantage of it.

Hey....you ain't ever gonna get an SQL Server
or even MS ACCESS into the likes of MS-DOS and
expect it to work worth a hoot. And then there's
communications and multitasking/multithreading;
always a nightmare in DOS. Piece of cake in
Windows. But for those who argue the point,
there remains Unix and its derivatives....but
even there....fewer and fewer want it, despite

the emergence of Linux as a free alternative.

I know....I know....I know.... <sigh> but it
all boils down to WHAT you DO...as opposed to
what you CAN do. And I'm aware that this logic
comes around to where scanners are going now.
CAN DO means more to me because periodically
I take my scanners and computers to new heights,
but most folks need to focus on DOING and not
CAN DO's. So this "progress" is both a winner
and a loser for me.

> Tell me more about the
> circuit or fax it to me and I'll tell you something more intelligent.

I sent you a fax of the Block Diagram for
starters. Didn't want to needlessly burden
you with too much. But holler if you need
more. CAN DO. :-)

> 2006 ?

You can't. Not unless you buy a basket-case
PRO-2006 somewhere and salvage the Logic/CPU
board out of it. But in that case, the risk
is that this board is also defective.

Better sharpen up your microsurgical skills
and order the individual parts from Tandy.
So far, most everything is still available,
but in another year or so, they will stop
supporting the PRO-2006.

Nick,
You're quite welcome.
I have filtered out Mackey, but not Cheek, since he has a great deal of useful information to offer. You may have noticed that he, too, has filtered out Mackey, as have a number of others. It surely does make a difference!
Very best regards,
Dave, K4CC

<hanging head sheepishly> I've actually had it since 4/93. Changed jobs and cities of residence in 5/93, and finally got around to putting it together (external installation in a RS 'project box') a couple of years later. Set it aside when I ran into the crystal speedup problem and was once again in the process of moving. I'm getting back to it now because I have just recently gotten to the point of having some time to fool with it (went from working for "the man" to working for myself). So, yeah, five years is long enough .. it's time to finish it!
Actually, it's finished .. what remains is to do the connection to the PRO-2005, and put a ceramic resonator back in. I've been re-reading the documentation, and additional impetus is most welcome.

Sheepishly? Hah! You should hang it
in utter shame and humility. ;-)

Oh, working for yourself? I understand now.
THAT is different. Raise your head in pride
and thump your chest a little. I wasn't aware
you worked for yourself. Man, that makes a
big difference. Explains everything. You work
20-hrs a day for half the wages of everyone
else. And then Mama, kids, and dog want some
of the time that's left over. Ferget eating
and sleeping......

Okay, did I send you the latest software
package yet? If not, I can...it's about
750-k and self installing in that it's a
self-extracting archive that creates its
own directory structure. You should probaby
start with it. No telling what you have
from 4/93....but forget it.

Just gimme an e-mail address where to send
it and your "okay" because due to the e-mail
bombers now, I don't send anything without
advance warning.

> Actually, it's finished .. what remains is to do the connection to the
> PRO-2005, and put a ceramic resonator back in. I've been re-reading the
> documentation, and additional impetus is most welcome.

I can also send you a text file of the latest
docs as well as a Microsoft WORD 6/95/97 file
if you can use it (specify which). It beats
the original manual by a country mile. Better
photos, diagrams, etc. The WORD file is 5-MB
zipped, soooooo??? I don't think AOL allows
file attachments larger than 1-MB, but by
appointment, I can put it up on my FTP site
for you to download.

> >I'm telling you this is a very traumatic crisis.
> >
> >;-)

> I know you can weather it. Just enjoy the peace and quiet.

Hah! Just a while ago, a minister of
some sort came to my door wanting to save
my soul..... he ignored my ABSOLUTELY NO
SOLICITING signs. I told him I was fixing
to have some of his soul if he didn't
pack his sack, stash his trash, and show
me heels, elbows, and asshole trucking in
harmony down my sidewalk. The guy begged
my pardon and booked.

On top of all that, I got a crick in my
neck and some sort of a nasty lower gastric
disturbance.....parameciums and amoebae
hard at work, I think....

So..... you get the idea......

It's been a rough day so far.....

hahaahahhaha!

Richard, you are so desperate to find something on me that you
went to the PARG web page to find my picture in the testing section.
But you have a problem, They mislabled the picture, I am the guy NEXT to
the picture you show!

You are so pathetic!

985. taxi mdt decoding

HI, maybe some one out there can tell me what type of data GANDALF TECH
transmits on 800mhz in phila. a local taxi co in phila has been using mdt
dispatch
for 9yrs & it is from gandalf systems. the mdt is interfaced with radio;
the mdt is
called CABMATE there are several other cab co in ny, atlanta,san fran ect
who also use system. can you e mail me info on gandalf data & can it be
decoded with
software & scanner with computer
thanks

Message-ID: <fEyo1.131861$zu1.15176980@news.rdc1.bc.wave.home.com>
Source record: 153622

I just got back from Radio Shack. I just wanted to see what they have to offer in scanners. I don't think I will buy one until I try one and find out a bit more. I was talking to the salesman and he said that if your scanner can read frequencies in the 800 range then you can pick up cell phones. He said all you need to do is cut a specific diode inside the scanner. He said a technician would know which one. Do you know anything about this? Any help would be greatly appreciated.

Danny

987. Need help w/RS PRO2050

Perhaps there is a simple answer.

I have an old pro-38 scanner that I listen thru my stereo system occasionally. I connect from the earphone jack etc.

I do this because the v olume on the scanner is so low....If I boost the volume on the scanner while connected trough stereo, the increase seems resonsive and normal, but disconnected from stereo..full volume is barely there??

Any ideas????
I hope I have explained clearly enough.

The government (pronounced gub'mint) didn't have any problem getting into radio; they'll be here too. I dunno when. But they're coming.

But I seem to think that the legal radio hobbies peaked somewhere in the early 70's. There used to be a time where there were appliances but no computers in everyone's home. A few dumb terminals were popping up in high schools or if you were real unlucky: teletypes.

Before computers, these radio guys were on the cutting edge of home electronics. They were reaching out and touching personalities continents away (seemingly for free) on little metal boxes with analog gauges and knobs. So not only did you have enthusiasts who were interested in radio for the sake of radio; but enthusiasts who held radio as the holy grail of technology and resigned themselves to learning a little bit about radio along the way.

It seems obvious that when the computer became commonplace, the radio hobby (and associated markets) must have taken a huge hit.

If you don't believe me, take a look through some high school yearbooks in the 60's and 70's and compare the Ham Radio Club photos to the Computer Sciences Club photos in the 80's: It's the same friggin' group of guys! You'd swear they just dressed them slightly different for each photograph even though they're taken a dozen or more years apart. I've seen high school yearbooks that supported both the Ham Radio and Computer clubs; and they used one photo TWICE!

But as computers became common place, the radio hobby must have paid a hefty price.

The radio hobby was no longer the suburban holy grail of communication. It's no longer the easy nor cheapest way to reach out and touch a random soul in Australia. (And that's what catches on nowadays: cheap and easy.) For the first time, new radio enthusiasts are only enticed by the sometimes mundane mechanics of radio propagation and reception.

Of course the radio market benefited from the surge in computer technologies. Enough so to sustain a viable market into the eighties. That is until regulatory oversight dealt the next big blow to the casual scanner hobby.

So the radio hobby got a one-two punch:

(1) It lost the "Suburban Holy Grail of Communications" trophy.

(2) The ECPA stomped the hobby further into the ground.

It stands to reason, that the radio "purists" will eventually inherit this medium.

Others will find interest elsewhere.

Hmmm. Maybe the meek *do* get it all in the end.

But not today! I'm still posting!

allsafe

Good grief! Have I porked myself?

I mean, geez, here I got me the Mother of
All Twit Filters, that can filter not only
by author, but by subject line; reply threads;
and even key words and phrases in the text,
and now there ain't a dang thing to read.

Hardly.....

That, or everyone stopped posting. Surely
that can't be it. Surely not. Surely......

Nope, I know good and well THAT ain't it.
Because there was a nice little inspirational
discussion starting up in one of the CTCSS
threads, and I picked it up just fine.

But whatever it is, is certainly tantamount
to Peace In The Valley. But the irony is
that if this is heaven, I'm not so sure
that hell hasn't gotten a bad rap. I wonder
if maybe old Moses or Methusela or Abraham
weren't drunker than skunks one night when
they wrote about heaven and hell and got
'em all switchy-swatchied.

Well, hell, I dunno what to do. Here I've
had ol' whats-his-face (I ferget now) on my
Shit List for a few days and suddenly there's
nothing to gimme a "fix". Cold turkey
withdrawal is what I'm facing here, folks.

Dang! Look, we're gonna have to start talking
scanners and scanning; else I'm gonna take
me a memory pill so's I can recollect whoever
it was that I was addicted to hosing down several
times a day whether she needed it or not.

Well, there was a moment of hope when I found
out who our illustrious "Stuart Upton" was....

good ol' Petey Joe Boe, but now methinks I
hadn't oughta have exposed his sorry ass,
'cuz even he's done run off. And I didn't stick
them two illegitimate cousins of ol' Whats-His-Face
on my Shit List like I done all the other twerps,
peckerwoods, nitwits, nincompoops, halfwits,
dimwits, turkeys, idiots, popinjays, fools,
jerks, lids, imbeciles, and hermaphrodites.

(Let's see....did I cover 'em all?????)

Oh, yeah, add in fart-smellers, flakes, fruits,
perverts, sickos, numbnuts, wingnuts, dipsticks,
ass-wipes, -bites, -licks, and -holes. There,
that ought to cover the contents of my Shit
List pretty well.

Oh well....anyways, if any of you'uns die and
go to heaven before I do, how's about coming
back and give a little snitch report of what
it's like up there. I'm awful confused now
and ain't real sure of where I want to go.

Yea, though I used to walk though the Valley
of the Shadow of Death, I feared no evil, 'cuz
I was the meanest sonofabitch in the Valley.

Now I ain't so all-fired sure of this Peaceful
Valley where everybody floats around 6" off
the ground playing harps and not saying anything.
No orgies, no peeing contests, no shit-slinging,
no feasts, no nuthin.

Hey, anybody wanna talk about scanners? Even
page scanners will do. I know about them, too.
You oughta see the slick pulsor light mods I
concocted for my HP ScanJet.

Well, anyway.....here's something to liven up
the action a little:

Anybody know what's about this long:

|<-->|

and about this big in diameter:

|<------------------>|

and has wheels?

All indications are that the receiver section,
down to and including the Discriminator and
Volume Control are fine and dandy. It is also
suggestive that the audio preamplifier is okay.

What's not apparently okay is the audio power
amplifier chip, which could be blown, but it
could also be a defective earphone jack that
doesn't cut the speaker back in properly when
the earphone is pulled. Or patch cable to the
stereo. But try a real earphone and see if it
has enough volume. If not, then there is a
problem betwixt the earphone jack and the
volume control.

A fix would first require that you have the
service manual. (800) 442-2425 for starters.

>Does any body know where to find cases to fit the AOR AR1000XLT radios.
>How about a radio shack model that will fit. Please respond to
>altman@ctel.net

I have a great detachable leather case with a swivel belt loop. It's
terrific! The company sells them for commercial purposes, but they
did have a couple scanner models out there. I lied and said I was a
dealer for the special and thus got 50% off the regular dealer cost,
about ten bucks U.S. when the suggested retail is thirty or so U.S.
<g> I wish I could remember because it's really high quality, even if
you have to pay full price. (I said one was all that I needed to
"test" their product. I also read Mobile Radio Technology, which is
very helpful and informative about what the radio industry is up to.
It was there that I sent for information from various advertisers and
got the scoop on the company with the leather cases. (and yes I have
an AR1000, that's what I refer to)

Fully licensed copy I bought last year, paid 'round 500 for it.
Check out all the specs/features at www.scanstar.com, this is the
software the Big Boys use, commercial & "Govt.", it really works well.
Not just some Hobby shareware program...
includes Hardware Key - License is transferable.

Asking $225. obo

Yeah, just like Stephen King's "Langoliers".
Munch.....munch.....munch.....

> But I seem to think that the legal radio hobbies peaked
> somewhere in the early 70's.

That's when they came on.....but CB propelled
ham, shortwave, and scanning, even after feast
went to famine in 1981. Amateur radio grew
and thrived well into the 80's due to the influx
of CB'ers from the past boom years of 1974-80.

Operation Desert Storm gave a big boost to
shortwave, of course, in 1991. Scanning enjoyed
a modest boost as a side effect, but was otherwise
teetering on the brink of the downhill slide.

Scanning actually got a kick-start in 1974 with
the entry of the Tennelec programmable scanner,
and a boost in 1986 with the entry of the Realistic
PRO-2004.... finally a scanner that tuned everything,
reasonbly fast and had a hunk of memory. Not only
that, but it was MODIFIABLE for a couple dozen things,
including computer control and data acquisition.

Hooo boy, 1986-90 were great years for scanning.
Lots of cool people and even though postal mail
was the main medium for exchange, many of the
folks found their way to PC's and on-line BBS's.

But that's where the death knell was sounded.
The shitbirds showed up, too.

> There used to be a time where
> there were appliances but no computers in everyone's home. A
> few dumb terminals were popping up in high schools or if you
> were real unlucky: teletypes.

Gawd, remember the Model 54? Hams loved those
clunkers. I hated 'em. Mechanical nightmares....

> Before computers, these radio guys were on the cutting edge
> of home electronics. They were reaching out and touching
> personalities continents away (seemingly for free) on little

> you have enthusiasts who were interested in radio for the
> sake of radio; but enthusiasts who held radio as the holy
> grail of technology and resigned themselves to learning a
> little bit about radio along the way.

And radio guys were the main repair centers for
all sorts of consumer electronics, from hi-fi
to VCR to anything that carried an electron....
You're right, radio electronics and electronics
in general were synonymous. For that matter,
remember the Heath H79 computers? Hams loved
those pieces of crap, too. Some still do.....

But yeah, in the early days, radio techs where
sub-deities, and they even took on computing
when it arrived.

> It seems obvious that when the computer became commonplace,
> the radio hobby (and associated markets) must have taken a
> huge hit.

Eventually, yes, I agree. At first, no. The
early Heath, Altair, Commodore, and Apple
computers went hand in hand with the radio
elite - not the rank and file, though. But
eventually computers went in one direction while
radio kind of stymied. Computers got too
technical and "digital" where the electronics
didn't match what the radio guys knew best.

But that wasn't it, I don't think.

> If you don't believe me, take a look through some high school
> yearbooks in the 60's and 70's and compare the Ham Radio Club
> photos to the Computer Sciences Club photos in the 80's:
> It's the same friggin' group of guys! You'd swear they just
> dressed them slightly different for each photograph even
> though they're taken a dozen or more years apart. I've seen
> high school yearbooks that supported both the Ham Radio and
> Computer clubs; and they used one photo TWICE!

Right. Those were the days when radio and
computers were of the same roots to an extent.

> But as computers became common place, the radio hobby must
> have paid a hefty price.

It did, but for several reasons, I think.
Most dramatically, due to the Internet that
swelled into prominence starting in about
1993-94. The mere effort of learning computing
and network communications required most of
the hobbyst's time. There was less time
available for radio. Lesiure pursuits are
like that. Generally, one prevails to the
disadvantage of the rest. So the learning
and mastering of computers together with
getting on-line and making it useful just
took a lot of time away from radio.

> The radio hobby was no longer the suburban holy grail of
> communication. It's no longer the easy nor cheapest way to
> reach out and touch a random soul in Australia. (And that's
> what catches on nowadays: cheap and easy.) For the first
> time, new radio enthusiasts are only enticed by the sometimes
> mundane mechanics of radio propagation and reception.

Yes! That, too! Indeed, much of the thrill of
radio can be had, all rolled into one price, from
a PC on-line. Not only that, but half the fun of
radio is talking about it. Hell, here we are
talking about it, eh?

> Of course the radio market benefited from the surge in
> computer technologies. Enough so to sustain a viable market
> into the eighties. That is until regulatory oversight dealt
> the next big blow to the casual scanner hobby.
>
> So the radio hobby got a one-two punch:
>
> (1) It lost the "Suburban Holy Grail of Communications"
> trophy.
>
> (2) The ECPA stomped the hobby further into the ground.

Yes, I think you're right again. Governments
have never liked their citizens having free
and unrestricted access to communications media.
So the ECPA took its toll, but worse was the
TDDRA of 1994. The ECPA was just a set of gums
and lips. The TDDRA had teeth and horns

But there are other factors. Look at shortwave
broadcasts now that the Iron Curtain has fallen.

Politics plays less of a role and economics looms as a major force. Well, it costs a bunch to radiate 500,000 watts day in and day out. And it costs a lot less to rent some transponder space on a geosync satellite. Programming of all sorts is going up by satellite now....

As for scanning, well there is less and less to hear these days and the momentum won't change. Why should Joe's Pizza obligate to a 2-way system, along with the godawful startup and maintenance costs, not to mention repeater rental? Well, once there was no recourse, but now cellular telephones are cheap and the cost of cell service is relatively cheap and predictable.

And what's left for the VHF-UHF medium is rapidly going digital or even encrypted. Trunking may not be all its cracked up to be, considering the monstrous costs, but with more and more 2-way users going PCS and cellular, there will be more spectrum for spread spectrum and emerging new technologies that the hobbyist just won't be able to monitor.

And then we have cable. Coax and fiber can carry hundreds of times more programming at a fraction of the cost of broadcasts.

And then we have the Internet....and an emerging new angle.....Virtual Private Networking (VPN). Already the technology is here such that your machine could connect to mine via the Internet and establish a basic ethernet network. And be very secure! No prying eyes! No disruptive hermaphrodites, idiots, and jerks!

In short, there is a coming new slant of the Information Age that has the potential to replace 90% or more of all radio applications. Radio just isn't in the focus or mainstream anymore, and it's not likely to ever be again in our lifetimes.

But there is an exception. Survival. The Information Age is wholly dependent on copper, fiber, satellite, and to a minor extent, land microwave. And fiber is really a bit player since it all terminates into copper anyway. What this means is that a single

well-placed nuclear burst about 300-km
over Kansas has the potential to bring the
Information Age to a standstill due to the
widespread destructive effects of EMP
(electromagnetic pulse).

A massive solar flare can accomplish much
the same thing, not to mention an elite
terrorist operation, meteors, massive
storms, conflagrations, etc.

In the final analysis, radio is rapidly
headed the way of last year's Rears & Sawbuck
catalogs, 3-holers, and corncobs, but we're
gonna be in a helluva mess if and when
the copper/fiber land network is ever
disrupted.

This may be a clue to put some radios away
in mothballs and cosmoline.

Clean sleek looking radio..
ICOM r100 Receiver.
MINT (BRAND new).
Brand new cond. w/ discriminator squelch tap mod jack in rear (perfectly

done).
Sorry do not have box or mtg bracket. Includes manual, AC adapter.
$550 (paid over 800 orig!)

ADD my MINT-NEW Opto DC442+ (PLUS) w/ Nicads for only $250.
Decodes everything including LTR trunking data!
RS232 cable included.

Will throw in a free 12V Gell Cell battery pack to power the Icom (gets
a full days use in) if you buy both...

Thats the Icom R100 & the Opto DC442+ w/ NiCads for $600... You cant
even score
the R100 for that price anywhere.
Excellent products & both work GREAT with each other.
Both items are MINT w/ manuals & are under warranty...

FedEx COD or Prepay only.

My radios have been silent for just over a month while I was on the road
for work.

I turn 'em on to hear the local PD & come to find 482.3625 is silent.
I am guessing they switched to ALCO's system?
Anybody local here in East Bay Area got info - or is my coax just cut?
Sh*t, guess I gotta buy a trunktracker now!

1022. BC 590 XLT Audio

Newsgroup: rec.radio.scanner
Date: 1998-07-08 00:00:00 UTC
From: Mike Derryberry <michael.derryberry@MCIONE.com>
Message-ID: <01bdaa4c$88d46820$9c1637a6@default>
Source record: 153658
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am purplexed with an audio drop out problem on my Uniden BC 590 XLT scanners. (Note the 590 is the same as the BC760 without the 800mhz) I have 15 of these scanners in use at work and several have developed a problem with the audio, it just drops out ... nothing, silence. Adjusting the volume control does nothing and turning the radio off and back on does nothing. The only way to make the audio come back is a nice sharp "tap" to the top of the unit. (Yeah I know, real good way to fix things).

I have tried replaacing the volume controls, no change. I have scoured the board with a magnifying glass looking for a bad solder joint and find nothing. I have re soldered anything even suspect as being bad and no change. The scanners in the cars Take a beating and go thru major temperature changes with the daytime heat here but it happens in summer and winter.

Any suggestions short of sending them back to Uniden for repairs ???

I don't mind the $50 charge for the repair it's just that I don't want to listen to efveryone bitch because their scanners are in the shop. (Oh well, what's the difference ??? they bitch now 'cause they don't work right)

Thanks for any and all suggestions ...

Mike

Naw, we'll never get so lucky as to see the day when the looney bird (Mackey) flies away. Mackey thinks his mission in life is to speak for the entire NG, play net cop & flame everyone in sight while saying they are flaming him.

John is about as good as a pimple on a turd. What a loser and a moron.

Mike

P.S. It is nice having him "twitted away" soooooo quite today. I'll just have to read everyone's reply's till get around to totally twitting him away.

>How about a radio shack model that will fit. Please respond to

You might try Design EQ (Howard Bornstein) as they sell a a leather case
for this radio.

http://www.designeq.com

The original soft case that came with it is still available and you
might also find some third party "pouchs" for cellular phones, cameras
etc might just fit the bill - more of a case (no pun intended !) of look
and see on the latter.

Kind Regards

So, what you're saying MACKEY, by ignoring my question about how you're
gonnna help the ng, is that you have no intent on doing so?
I mean really, I didn't flame ya, I just asked how you were going to
contribute to the reduction of off-topic posts and flames in the ng.
Yet, you directly did not answer the question....don't say you didn't
see the question, because it was in my post in which you just snipped
one line of mine.
I see it's blatantly obvious that you have no intent on stopping the
problems here, only telling others to do so ...
Shame Shame.

1032. Re: BC235 attenuator/sensitivity problems

Newsgroup: rec.radio.scanner
Date: 1998-07-09 00:00:00 UTC
From: Millimeter Wave Report <mmwr@email.msn.com>
Message-ID: <e#CfKa6q9GA.243@upnetnews05>
Source record: 153369
Cross-posted to: alt.radio.scanner,rec.radio.scanner

For the benefit of people who are wondering what this thread is about (my original post has expired on many servers), this is what I originally wrote about the attenuator:

Gang--

I just received my BC235 today, and noticed that they have now added an attenuator option to the keypad. It does double-duty with the "." key, and the label "ATT" appears above this key. This feature does not appear in the picture on the box, and Rich Wells' excellent review of the BC235 (http://osha.igs.net/~durhamradio/bc235r.htm) specifically mentions that there is no attenuator capability on the first release of this radio. Also, there was no mention of, or instructions for, this button in my instruction manual. The serial number of my scanner is 75027749, and is was delivered via mail directly from Uniden (it was a result of that Holiday Inn promotion I posted earlier!)

Anyway, the new feature is not programmable by channel. It is a simple "on-off" toggle that turns the attenuation (probably 10 dB or so) on or off with each press. It works in conventional, trunk, and manual modes. When attenuation is on, the decimal point in the display blinks. This feature would be useful in areas where intermod and other non-linear interference problems are encountered.

By the way, I have used my scanner for a whole 2 hours now (I just opened the box this evening), and it seems to work very well. A funny thing happened, though, when I first turned it on. My first action was to scan the weather band, where the local 500 watt NOAA weather station is always a good reception test. Well, I scanned the wx channels, and---nothing! Not a peep. Then I entered the weather frequency directly, and nothing. I re-oriented the antenna, moved closer to the window, removed and re-attached the antenna, jiggled the radio a little, adjusted the squelch, and absolutely nothing but hiss came out of the radio. My heart sank thinking I would have to return this dud and wait two weeks or more for its repair or replacement. As a last check, I turned my upstairs base scanner on and checked the weather station and, you guessed it, not a peep! For the first time I can remember, the local NOAA weather radio was knocked off the air, and it happened exactly on the evening I tried to use it to check reception on my new scanner. I quickly hit the service search button on the BC235, and discovered that the scanner is receiving just fine. Was this a cruel joke or what?

Happy scanning!

1034. Re: Discone as a TV antenna?

Newsgroup: rec.radio.scanner
Date: 1998-07-09 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <6o3opm$se@dfw-ixnews10.ix.netcom.com>
Source record: 153371

Probably channel 4 is located further away than the others you watch -- or xmits with less power. You are suffering with the 20dB loss due to mis-matched polarization between the transmitted signal and the antenna.

Broadcast TV is transmitted with Horizontal polarization. Discone antennas are Vertical (almost, the slanted legs of a discone are not exactly vertical but are close). There is aprox 20dB difference (attenuation) between a horizontal signal and a vertical antenna. (20dB means the received signal is 100 times lower). You should be getting bad signals all the time! Probably getting occasional good pix because the signal is bouncing off a reflector (building, mountain, house, etc) and its polarization rotates to somewhat vertical when it reflects and you have a better match.

You can experiment by tilting the discone over on its side and channel 4 should be better, but it really is a better vertical antenna. You are probably better off with a TV antenna (or a homebrew dipole - an easy ant to build and is horizontal).

You are doing well to experiment with antennas though, remember "All antennas work, some better than others". You never know what will work for your situation until you try it.

cheers

Rick

Sounds like sporatic E to me. At this time of year stations far away will override the locals for several hours or even most of the day.

Ted

Group,

Just to add my contradictory 2 cents worth: I added a CB whip to the top of my Radio Shack discone antenna. My purpose was to improve 25-50 MHz reception on my Pro-2035. I did not notice any significant improvement in reception. It may be that the Radio Shack antenna doesn't respond as well to adding a whip as other discones do.

Please don't make me GAG! John Mackey is THE cause of disruption in this NG and has been for years. He has posted thousands of messages in rec.radio.scanner over that time. 6 (count em, 6, they're quite an accomplishement for him too) of those posts were on topic, and of that 6 maybe 2 were relevant and helpful. The guy deserves all he gets, because he doesn't belong here. Just browse the group. I unkillfiled him just long enough to tally up his posts. I counted 63 since Tuesday, June 30, and not ONE of them is on topic. Not one. Go into any usenet group of your choice and post 63 off-topic b.s. messages in there and see what kind of responses you get. You're damn right we don't want him here, and he knows it. He's the one perpetuating this crap by not posting on topic and/or leaving well enough alone.

Most of us have had to resort to alternate measures to try to put an end to this. It's called a killfile. Go on in and stay awhile would ya?

PLONK!

So many morons, so little ammunition.....

-Phil

Jeff,
Among those currently in/near production we have :
Alinco DJ-X10 (coming soon)
AOR AR3000A
AR5000
AR5000+3
AR8000
AR8000B
AR8200 (near future for the US)
iCOM IC-PCR1000
IC-R10
IC-R8500
IC-R9000
Opto OptoCom (coming soon)
RS PRO-2042 (fading fast since discontinued)
PRO-26 (might be near impossible to find)
Sony ICF-SC1
ICF-SC1PC
Sporty's JD-100
Uniden BC3000XLT
BC890XLT
BC895XLT
BC9000XLT
UBC3000XLT
UBC9000XLT
Welz WS1000
WS2000
WiNRADiO WR-1000i
Yupiteru MVT-7100
MVT-7200
MVT-9000
VT-225

Of these models, the AOR AR8000, Uniden UBC3000/9000XLT
and those models made by Welz and Yupiteru are not
approved as US models since they do not block the cellular
telephone bands.

Up to you to decide whether you want a base, handheld,
or computer controlled model, any other required features
and your price range.

You can find out about many of the above radios by visiting
my Radios page : http://www.strongsignals.net/htm/radios.htm

Good luck!

> > Ron

The leather case, box, manual antenna, nicads, and AC adapter will add a few bucks to this triple conversion hand-held. Sooner or later, the cell capable scanners should be going up in price as the working supply goes down.

A 2006 would be the better choice if it is priced the same. But I expect 2006's should be starting to climb towards the 400 dollar mark soon.

But if ya wait a few years for all the cellular networks to go digital, the price on the 2006's and 43's should come down. (no friggin' wonder; not much to listen to.)

Oh, by the way. I'm sitting on two dual conversion GRE scanners. But they're not 2006's or 43's. I wish they were. But they're not.

Bought my Pro-39 during the Radio Shack clearing at $199. I bought my Pro-2032 at a pawn shop for 50 BUCKS!!!! (It's not the perfect scanner, but I still think I scored BIG TIME with that 50 bucks.)

Then one day, I saw a stack of a dozen boxed Pro-43's sittin' in a local pawn shop. All going for $199. That was 'bout a year ago. I was under the impression at that time that *all* 43's were 800 unmodifiable. I laughed. (HA-HA-HA) I assumed somebody didn't know that. I thought dingleberry bought all the 43's his local Shack had to offer tried hanging onto to them until after the ECPA passed. Then: PAYDAY!

I assumed the person realized their folly (unmodifiable 43's) and sold them back to a pawn shop for about fifty cents on the dollar. (Bend over! This is gonna hurt!).

And of course through the purusing of this NG, I picked up tidbits that indicated some 43's were modifiable, but some had some anti tampering measures applied which made it harder to modify, but could be modified nonetheless. Was it epoxy on the diode? What percentage of the 43's had reasonable anti tampering measures?

Anyhoo; I learned how to read Radio Shack date codes here. Something 'bout ECPA and April '94 is real important. Learned that here too.

I thought I should go back to that pawnshop and have another look.

You know what?

They were all gone.

But I got two pretty good scanners. They're alright. I can hang. they'llhaftado.

You frig.......oops, sorry! Wrong thread.

I heard that TV signals were transmitted with Circular Polarization, to
accommodate both the traditional TV antenna as well as Rabbit Ears.

You might try moving the antenna sideways a short distance, to see if
something might be interfering (electrically) with it. 1/4 wavelength
on channel 4 would be about 3 feet, so that's the scale of movement
to try.

Good luck,

Greg.

p.s. My college-days method for optimizing my stereo's antenna was to
wad up the twin-lead antenna and throw it behind the couch, repeatedly
until it sounded good...

I recently acquired a PRO 26 and the 800mhz reception is terrible!!!
almost nonexistent. (I monitor LA City fire & Orange County Fire).
I've tried changing the mode (NFM, WFM, AM) but that didn't help, and it
can't be location because all my other scanners work fine in the same
locations. All other frequency ranges on the Pro 26 , including 900mhz
(I monitor Disneyland), work just fine.

Any ideas????

My next resort is to bring it in to my local radio shack for
servicing...anybody have experience doing this???...is it a safe thing
to do????

thanks

Sorry, don't know of any 800MHz freqs.
Here's some published std. one's you
probably already have.

USAF Thunderbirds:
140.4
parachutists 138.87
Maint 148.55
F-1 295.7
F-2 273.5
F-3 283.5
F-4 322.3
F-5 322.6
F-6 382.9
F-7 394.0

USN Blue Angles:
241.4
emergency 243.0
250.8
251.6
263.35
263.5
275.35
302.1
302.15
307.7
319.8
345.9
360.4
362.6
384.4
391.9
395.9

I'm not a pro here, but I don't believe you need a roof antennea to aid in picking up freqs in the 800Mz+ band. If you were looking to get better reception on shortwave, air or some other lower band of transmission I know that a roof antennea helps tremendously.

Due to the higher freq you're focusing on, however, I believe the telescope will work ok.

Again, I'm not a pro here. I'm also very interested to hear what others would say on this matter.

I removed the rabbit ears from my TV and connected my Rat Shack $60 Scanner Discone (located in the attic) as my primary TV antenna. It looks GREAT on everything but channel 4, my most watched channel ;-(

Here's the problem: It looks good, static, more static, MAJOR static, looks good again. This goes on forever in the cyclic pattern above.

Why? Does the Discone's broad frequency range cause this? Is there a fix, or should I break down and buy a real TV attic antenna?

I bought a 235 about 3 weeks ago and my unit doesn't have the ATT function. SN 75020726. It would appear to be a real recent change to the unit. So there is a good chance that if you buy mail order in the next month or two you have a good chance of getting the previous version. Anybody taken the time to look at the ones for sale at the retail level? As for tech support at Uniden knowing of the change. More than likely the tech support is contracted out. The person on the other end would only know what was put in the data base. So first they would have to know what to look for (That keyword search can be a bear) and two it requires Uniden to be diligent on updating the info on a regular basis.
No signature block
Just a block

>>
>> To all those who have requested more info on the "ATT" function which at some point has been added to the 235, I point you to Andrew Clegg's original post. In Deja News, search on "BC235 now has attenuator". (Sorry, every time I try to include a link to a DN article, it doesn't work.) My unit's serial number is 75036260 and it has the attenuator. One respondent indicated that his unit, no. 75001886, does not have the
>> attenuator. Perhaps those of you with 235's can reply to this with your s/n and we can try to pin down when this change began. I'll be happy to keep a log of them and post the results. BTW, an additional jeer to Uniden for not suggesting this as the possible cause, either of the 2 times I called them regarding the poor reception. In at least one of those calls, they asked for the s/n, so they should have been able to tell it has the attenuator function.

Hi. I'm going on a Prince of Fundy cruise later this month from Portland, ME to Yarmouth, NS.

A search of Web, etc. turned up nothing as far as suggested frequencies for this ship (the M/S Scotia Prince).

Any ideas:

1) What frequencies are used for onboard comms (handhelds, etc)? I know this is somewhat of a stretch.
2) Barring this, where should I be searching when I get onboard (I'll have my Pro-43)?

>26 -27 Mhz CB band when skip rolls in. Anyone have experience here?
>
>Frank

An unloaded whip would need to be about 25 feet for those freqs.
Loading makes the whip "appear" longer. What is your center loaded whip tuned for? If you have access to a SWR meter (A HAM should have or can get) you can test your current whip or cut and tune for the desired range. I would definately recomend this if you are planning on Tx on this antenna.
Discones by design cuttoff very sharply at its low end. adding a whip essentially makes it a dual antenna.(Ground Plane/Discone)

> Bill, I admire you for having the patience to do something like that. All I
> can say is better you than me.

No, not better. Different. And hell, I even
admire that part of myself....to painstakingly
remove a 100-pin SMT CPU from the board without
any damage and then to put a new one on that
works right off.... I do admire me for that,
but you know what? I'll never do it again.

A guy who works as a professional SMT reworker,
popped his eyeballs out one day when he saw
the process I used to lift a pin at a time.
He said I was lucky to be able to do it that
way without damage.

His advice....that I'll follow if I ever do
it again....is to CUT the pins away from the
body of the device; remove it; and then unsolder
all the pins from the traces and clean them
up. Novel! Never thought of that before.

I've done one or two more MY WAY since then,
(you know, "old dogs" and "new tricks"), but
each time, I see how the risks are greater
and at least twice the time spent as his way.

I think for dual in-line chips like SRAMs,
my way is still good because you salvage the
original memory chip that way. But for four-
sided devices, like CPU's....his way is the
best, I'm sure.

1076. FOR SALE: Uniden Bearcat BCT-7 Highway Patrol Scanner

Newsgroup: rec.radio.scanner
Date: 1998-07-09 00:00:00 UTC
From: lordviper@bigfoot.com
Message-ID: <35a4f56a.1861244@news2.new-york.net>
Source record: 153444

This is a fully loaded scanner that covers all (legal) frequencies including 800 mhz and Aircracft. Still in the original packaging and with all the accessories.

Here is a summary:

Highway Patrol Alert
Highway Patrol Scan
Local/County Police Scan
DOT, News & Fire Scan
CB Monitor & Weather Scan
12 Bands with 800 MHz
100 User-Prog. Channels
One-Touch Band Search
AC/DC Operation
Mobile Mounting Kit

Features:

Highway Patrol Alert - Alerts you when you are within 3 miles of a highway patrol unit using a mobile extender.

12 Band Coverage - Including 800 MHz, all public service bands, "Ham" Bands, Federal and Military Land Mobile Bands plus Aircraft and Weather Channel.

100 Channels - Program to your choice of frequencies.

Turbo Scan - This lightning-fast technology enables the BCT-7 to scan and search nearly 100 channels or steps per second. The BCT-7 scans about five times faster than any standard scanner sold in the United States.

LCD Display - Nine digits LCD with back light display for night visibility.

Private Channels - With just the touch of a button you can automatically scan 25 programmed private channels.

Highway Patrol & Police Channels - Automatically scans highway patrol and police channels and your choice of 25 programmed channels.

Fire/News Channels - Automatically scans fire, emergency and news channels and your choice of 15 programmed channels.

State-By-State Scanning - Use the state key to select the two letter abbreviation for the state you are traveling in and the BCT-7 will start scanning the highway patrol frequencies

stored for that state.

WX Channels - Automatically scans all NOAA weather channels and 2 canadian coast guard channels.

Protection - Helps to advise you against all forms of speed measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Lockout Channels - This feature allows you to skip channels you don't want to hear (works for PRIVATE, POLICE, FIRE/EMG, HWY, DOT, FIRE and NEWS channels).

Band Search - The BCT-7 can scan almost 30,000 frequencies and has 12 separate band search capabilities and CB channels (1-40).

Mute - Provides audio mute function when others in vehicle do not want to be disturbed.

Memory Protection - The BCT-7 comes with a memory back-up system that remembers your state selection, frequency selections and deletions

Accessories - Includes DC cord, mounting kit, cigarette lighter plug, mobile antenna, AC adapter, telescopic antenna and a Frequency Starter Guide.

This is an amazing scanner but i don't really need it. It is brand new and has never been used. Make me an offer ($140 at least) and the top one will get it. I will cover shipping!

25 foot long? For what band -- 9 Mhz?? You're only wanting to find the length for a 1/4 wave whip, which is about 108 inches for the citizens band.

You can figure by dividing 234 by the frequency in Mhz which will give you the length in feet. Dividing 2808 by the frequncy in Mhz will give you the length in inches.

Don't know your exact CHP frequency but it works out to 66.07 inches for 42.5 Mhz.

Hope this clears things up.

I can field that question........

I had the same problem with mine!

There's a chip resistor that supplies power to the audio amplifier. It
is a really low value. I think it might have been 1 or 2 Ohms. Measure
it with your Ohmeter and I suspect you'll find it reads appreciably more
than the value written on it.

Be sure to do this with the power OFF on your power supply otherwise the
reading will be meaningless.

Replace with same value or whatever is close enough. Don't jumper the
resistor! The audio amplifiers are hard to find now.

I used a discrete component and drilled two tiny holes with my dremel,
through the PCB to mount it. I figure that a 1/4W resistor is gonna
last a lot longer than a 1/16 or 1/32.

It's been working for years now.

John Mackey is right. Bill's flames have slowed
down or stopped altogether. J. Mack only has
to deal with the people out there who WANT
to keep it going because they seem to have
so few pleasures in life and must resort to this
inexpensive form of entertainment. At someone
else's expense. I can hardly blame J. Mack any
longer because he is only lashing at the people
who constantly needle him. Something that MANY
of us would do ourselves.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of
it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. Please give me an offer.
It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of
10:00am & 9:00pm.

73,
Bill

I've had good experiences in the 800 area with cell phone antennas. They are inexpensive and are cut for a similar area. Consider one of the "through the glass" antennas. It can be mounted on any window in the house. Be sure to keep the coax line as short as possible.

A really kick ass antenna is an old style UHF TV antenna. Channel Master makes one called the "Blue Boy", a four bay bow tie. It is made for the out of doors. The best part is that it comes with instructions on how to cut it for the TV translator channels 70 thru 83! What a coinsidence, eh? Many of the highest channels (78 thru 83 specifically) were deleted from the TV spectrum by our stupid fucking government. They were then reallocated to local governments and the profitable cell phone industry. Look up Stark Electronics on the web. Price is under $20 dollars. One note: This is a directional antenna.

Best of luck,
JungleJim

Ryan, I can't believe you wrote the above statement, I thought you
had better insight.

First you supported Cheek & saw nothing else.
Then you were against Cheek & in one message you even told him
to grow up. Next, you started to support Cheek even when he belittled
your amateur radio license. As evidenced by your message at the
beginning, you are now defending Cheek!

:(

I am think of adding a long (7 or 8 foot) vertical whip to my Diamond discone but wondering if it will make a difference over the standard center loaded vertical whip on the low band for DXing. Also wondering how it will perform on 26 -27 Mhz CB band when skip rolls in. Anyone have experience here?

Frank

How about 10 1200 mA NIMH AA's for $25 + $3 shipping..

http://www.tfs.net/~dandl/battery.htm

RS charges 2 for $9.99 P. 293 '98 catalog.

Mike,
My S/N is 75002821 and as I said before, it does not have the ATT function. Andrew Clegg notes that it is located above the decimal point key. I wonder if it is available on older units like mine, just not marked? I will give it a try.

That is more than the scanner sold for new! The PRO 2006 which is a much
better radio than
the PRO 43 can be sold for $295.00. A PRO 43 in excellent condition
should go for about
$220.

That's not true. I got mine at a pawnshop for $40 and wouldn't sell
it for less then $300.

From: wilrobnson@aol.com
Message-ID: <1998070905433700.BAA14209@ladder03.news.aol.com>
Source record: 153495

Hi all... For the last 3 years (on and off) I have been looking for the
Kent
Corrections ops freqs. All I know is that they are simplex, on UHF or
800, and
only have a range of about 5 miles. They are not on the King County
Regional
800 system. I have looked at 453-458, 460-470, and some state-licensed
800
stuff with no luck. I was wondering if someone with an old POLICE CALL,
preferably pre- 1988 could look what's listed under KENT, CITY OF
(washington).
Any UHF would help. The jail was built in 1986.
TIA,
Brett

1138. FS: Motorola PDR/Paging Data Receiver Kits -UHF-

Newsgroup: rec.radio.scanner
Date: 1998-07-09 00:00:00 UTC
From: jg <jgom@bigfoot.com>
Message-ID: <FFFFFFFF.817538D3@bigfoot.com>
Source record: 153506

MOTOROLA -UHF- Paging Data Reciever.

'Kind of a tuff to find piece'

Model# NRE1794A

Basically a Paging data Reciever just as the name implies, POCSAG paging

data decoding to address a device or whatever, like a LED signboard.
Self contained unit in a black plastic housing with a BNC connector.
Has a GM300 style 16 pin connector on the side for connection to an
external device, and to connect the included programming cable.
Inside is a a circuit board with the "brains" and a snap on sub-board
which is just a standard BRAVO RF board, so to swap out the frequncy you

can just plug in a standard Bravo RF board.
I have two of these, one is in the Black housing, the other is a "spare"

meaning it is complete minus the housing/BNC connector.

These are excellent for specialty RF paging applications.

In this deal you get one PDR in the housing complete on 464.5000Mhz, an
extra PDR board with an RF module on 464.3250Mhz -minus- the housin,
manual, programming Software, programming Cable! So you can program the
parameters & capcode of the units.
These things run upwards of a couple hundred bucks a piece.

Get some more info / specs on these at

http://www.mot.com/MIMS/MSPG/Products/OEM/paging_data_rcvr/index.html

$200 obo + s/h for *everything*...

Notice that the feud has ended, Bill has gone back to on topic posts,
and is ignoring MACKEY. However MACKEY feels the need to police the ng
still, so he's still making roughly 25 posts a day, OFF TOPIC, doing
nothing more than saying or should I say Whining.
But, then again, what else should we expect from him?

Several people--Cheek included--have put Mackey into their bozo filters. Unfortunately, Mackey continues his relentless flaming, personal attacks and all of his other usual sordid tactics. He insists that everyone stop engaging in the very tactics that he espouses. Under the circumstance, I doubt that he'll ever stop disrupting the newsgroup.

Get a clue and start posting on topic, jerk.

1151. Motorola MTX-8000 B7 Programming revisited (help)

Newsgroup: rec.radio.scanner
Date: 1998-07-09 00:00:00 UTC
From: syskey@hotmail.com
Message-ID: <6o14tn$s77$1@nnrp1.dejanews.com>
Source record: 153567
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt,radio.scanner

Hello ALL,

I just purchased two MTX-8000 portables, but I am having trouble programming them. They are Model H01UCH6DB7AN NX

When I attempt to enter any frequency above 865.9875 -- the radio won't support it for either trunking control channels or conventional personalities. I have other MTX-8000's with the same model, and these radios support 866-868. What possibly can I do to fix this issue?

Does someone possibly have a codeplug for a B7 model that they can send?

Also, does anyone know if the Lab version of the MTSX s/w will tool proof violate a MTX-8000? I suspect that this verison of s/w may be able to help me.....but I want to make sure before using it on my two radios.

Sorry Chris, the guy (whatyoulookin@hotmail.com) WASN'T asking about
Cellular frequencies.

If you read the post, he stated, and I quote, "send me some frequencies for
scanning the 900 mhz cordless phone band". Cordless phones operate in the
902-928 MHz band.

I don't even have a scanner that receives cell, but I was curious.
Let's say you are driving down the highway beside a car monitoring the
occupant of the other car on their cell phone:

Question one:
How do you know if the frequency you are on is a tower or their phone?
(as I understand it you would only get their side of the conversation)

Question two:
If you are monitoring their phone, how could you find them on a tower?

Question three:
What happens when they switch towers? Does the phone and tower
frequency change? Or just one?

Question four:
If you are talking on an analog cell phone. Is there anything you
could do to keep someone from monitoring your conversation on a
scanner? Or make it more difficult?

Thanks,
JD

I Personally Use A 6 Element 800MHZ Commercial Yagi
Maxrad is the Best But Antennacraft makes a good one
You Can Find these at Commercial Radio Shops for around $60.00

The Old Cellular Security Group I believe the Makers of the Max 800(Which in My Opinion is Crap) Makes a VERY Very Good 12db Gain Loop Yagi which i have personally seen pick up a trunk system 50 miles away with almost no background Noise.

I believ they Cost 75.00 but have no information on them

I have My Yagi Hooked up to a rotor at a height of 40' and have excellent results on my BC895 and Pro 90

Just Remember that 800Mhz is very much line of sight so you probably wont pick up stations over say 50 mile and be of good quality.

Just my 2 cents

From: Scancat <scancat@mailexcite.com>
Message-ID: <01bdac48$99d46be0$97252581@default>
Source record: 153233

First of all .... a channel is the number you see when your scanner is on...1..2..3..4..5..etc.
The loud "fuzz" you hear is called white noise and while your hearing it, turn your "squelch" up and the fuzz goes away...this is where you have your squelch adjusted properly for that channel. Now programming......push manual <man> push 1 hit manual again....now you should be stopped on channel 1. Now just for simplicity....push 162.550 or whatever your weather frequency is there now hit enter.
now you should have the weather on your channel 1. you may only see the "1" not the frequency but you should hear the weather.....now repeat the steps for the rest of the channels entering whatever frequencies you have...I am not, however , familiar with that exact scanner but most Bearcat's program the same.
Good luck.....if this does not work maybe someone else will be kind enough to helps you...

Well, Ryan, that's exactly what it is, a repeater.

>Not as such although it does act as one.

Correct.

>:A repeater is used to extend the range of a
>:radio (in my case, I have an HT). A cellular tower is just a random
>:transceiver setup to "talk" with one or more cellular phones.

Nonsense.

>It's not random.

Correct.

>:In other words, there is no *other* cellular phone going through the tower
>:on an input frequency, and having that transmission transmitted on an
>:output frequency for all others to hear.

Again, Ryan, you are wrong. It's intended only for the phone that's
part of the conversation, but anyone with the proper equipment can
hear it, and other phones have to be able to detect that the channel
is in use so that they can select an unused channel.

>:A repeater broadcasts to everyone set to the same output frequency. Cell
>:towers only transmit to one phone.

It's still a repeater.

>Cell phone towers broadcast to any receiver set to the TX frequency.

Yep. There's no other way to do it with ordinary FM.

First of all, it is illegal to listen to cellular phones in the U.S.

JD <*dbenson@mindspring.com> wrote in article
<6o5te8$2nb$2@camel29.mindspring.com>...
> Question one:
> How do you know if the frequency you are on is a tower or their phone?
> (as I understand it you would only get their side of the conversation)

Easy. Cellular phones always transmit within 824 to 849 MHz and receive 45-MHz higher within 869 to 896. Likewise, the tower receives within the 869 to 896 band and transmits within the 824 to 849 band. The 869 to 896 band is where you'd hear both sides of the conversation.

> Question two:
> If you are monitoring their phone, how could you find them on a tower?

If you know the "transmit" frequency they are currently using, just add 45 and you'll get the "receive" frequency that the tower is transmitting.

> Question three:
> What happens when they switch towers? Does the phone and tower
> frequency change? Or just one?

Both the phone and the tower switch frequencies. The tower signals the phone which frequency to switch to. that's why when you're using a cellphone you'll hear a momentary data burst as you switch to a different tower site.

> Question four:
> If you are talking on an analog cell phone. Is there anything you
> could do to keep someone from monitoring your conversation on a
> scanner? Or make it more difficult?

Buy a third party scrambler and attach it to your phone. But then the person on the other end of the call would have to have the same kind of scrambler/descrambler. Make it more difficult? Buy a digital phone and/or a PCS phone.

Well, thank YOU for saying so, and for
expressing interest in scanners and
scanning. I wish Smacksie and Queenstrom
and their ilk were as interested.

I intend to post more, for sure. But as
I suspected, Mackey and Company are about
to launch their next "Reign of Terror" and
it will hardly do for me to keep what I know
to myself....since others are affected, too.

Bottom line is that one person can't make
or break a newsgroup. Whatever interests
people the most will get priority...whether
it's scanners and radio or soap opera stuff.

> Thanks again and have a great weekend.

Thank YOU and you have a good one, too.
Things are shaping up to be kind of funny
this weekend anyway. Should be a good one
for most of us anyway.

The Percon CD supported Macintosh until the most recent (Summer 98)
release. The Summer 98 copy of the databse still works with the old MAC
database application provided on the older Percon CDs. I would call the
guy at Percon and see if you can buy the current CD rom and get a copy of
the database program from the older one. Tell him you are disappointed
that he no longer supports mac while you have him on the phone.

It ain't a forgery. That's the Mack, sho 'nuff!
That letter "O" is a symbol. It's an international
recognition sign for the Phetid Phairies Ass'n.
It's how they can pick each other out of a crowd
on a newsgroup.

BTW....get geared up for a massive Mack Attack
this weekend. He's going to go hawg-wild.....

<grinning>

TV sets never like omnidirectional antennas!!! Radio shack has most of
their antennas on sale right now.

Ahhh... aren't killfiles wonderful? It's amazing how much crap I got rid of just by excluding 5 imbeciles' lunatic rants.

And yes, Glennita is one of them.

How about it folks? Anyone else want to dive on in to the ole bozo box? I'm sure there's more Mackey AKA's and bozo's out there. I couldn't have twitted them all....

..or could I?

Newsgroups: rec.radio.scanner,alt.radio.scanner

THIS IS A PUBLIC HEALTH WARNING!

Beware of a possible massive Mack Attack
over the weekend.

The poor sap got caught bent over with
his pants down....doing some Rogue Cancels
and idiotic errors in the process.

He will be attempting "damage control" and
probably retribution, especially if MCI gives
him another Size #13EE crosswise on the seat
of his britches.

It's shaping up to be a "great" weekend for
the Wayward Wandering Forger and Canceler.
He'll have all kinds of time to drive up to
Clark College and other open servers this
weekend.

Forewarned is forearmed........so practice
safe e-mailing and safe newsgrouping this weekend.

THIS HAS BEEN AN ANNOUNCEMENT FROM YOUR
LOCAL PUBLIC HEALTH SERVICE. Now back
to our regularly scheduled programming with
news at 11.
```

Yes, well I hereby challenge the twerp to get thru. I've got the mother of all killfiles here and I'm itchin' to test it.....

While you're at it Mackeroonious, try to send me mail. I need to test that feature as well. (Either he hasn't tried - which I doubt, or that filter is also right and tight.)

And no cheating either, you little worm. It's gotta be from jmackey@parg.org, not Name-DuJour@my-dejanews.com or some crap like that. Can you do it bozo? $5 says no. In fact I consider it a bet - a gentlemans' bet (although you don't qualify)

To accept the bet, all you have to do is email me a mailing address for your $5 and I'll send it - IF you get in AND you meet the stipulations above.

So, do we have a bet?

1195. Re: Icom PCR-1000 3rd party software

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: John <mcdermon@usa.net>
Message-ID: <GGxp1.5377$e36.757000@news.mci2000.com>
Source record: 153263

I hope Icom is in fact listening. They might well weather the storm of dissatisfaction with their policies related to the PCR-1000, but there is no way it is a winning situation for them. Its sad but almost funny to see a "corporation" acting so stubborn in the face of such incontrovertible evidence that they have taken a dump stance on holding the command protocols hostage for ransom. Is ANYONE yet willing to pay up, Icom? I doubt it. If so, I hope you folks will be kind enough to shart that bit of info with your customer base. We'd love to know WHICH 3rd party vendors have gained the "Icom Seal of Approval." <smile> Surely you're going to do that for those who pay the ransom, aren't you?

John, just be thankful you found out about those policies before they got your money.

How can we best alert the rest of the world? Surely Pop Comm or Scanning USA or some other publication will eventually put this little known fact out for public consumption. Or are they all so much in Icom's pocket that they're afraid to tell the truth. Icom sure isn't proud enough of this policy to post it on their web site.

John McDermon

Well, the odds against that are pretty large, but we'll go with it anyway.

>Question one:
>How do you know if the frequency you are on is a tower or their phone?
>(as I understand it you would only get their side of the conversation)

One set of frequencies is specifically assigned to to the phones, another set is assigned to the towers. You could tell by the frequency you were monitoring (which would, of course, be illegal) or simply by the fact that you could only hear one side of the conversation, which would mean you're getting the phone rather than the tower.

>Question two:
>If you are monitoring their phone, how could you find them on a tower?

The mobile unit will be 45 MHz lower than the cell output. Do the math quickly, before you change cells!

>Question three:
>What happens when they switch towers? Does the phone and tower
>frequency change? Or just one?

Both. Adjacent cells operate on different frequencies to avoid interference.

>Question four:
>If you are talking on an analog cell phone. Is there anything you
>could do to keep someone from monitoring your conversation on a
>scanner? Or make it more difficult?

You could buy them a scanner built since 1994.

Did I pass the quiz?,

1205. Problems w/Tape Recorder usage & BC9000xlt Scanner

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: Brent Clark <jetguy1@ix.netcom.com>
Message-ID: <35A6E2EC.3DFDE29D@ix.netcom.com>
Source record: 153273
Cross-posted to: alt.radio.scanner,rec.radio.scanner,SCAN-L@UAFSYSB.UARK.EDU

Just purchased a new Bearcat BC9000 scanner and tried to use it with my tape set up.
I have a Sony Pressman recorder which has auto reverse on both record and playback which makes it a great little unit for recording scanner action. I had the unit hooked up to my Pro-2042 which with a patch cable attached to the RCA outlet record plug at the back of the unit worked great. I could just turn the unit on and once a signal was received the recorder would activate and record. I could record action also with the volume turned down and the recorder would still record at the correct level.
Using the unit with the Bearcat attached to Aux at the back of the scanner will not activate my recorder.
Attaching the patch cable to the line outlet at the front of the unit results in recording but you need to have the sound up to record. Is this normal? It's nice to have the sound down while doing something else, hence one of the uses of the recorder.
I have set the channels and scanner to record correctly but the unit will activate only with the sound up and using the "Line" output on the front of the Bearcat.
I suspect that the problem lies with the voice activation on my recorder, but the unit worked great with my Pro-2042.
I assume that if I could use the RCA jack at the rear of the unit (Bearcat), that it may work similar to my Pro-2042.
Anyone have similar experiences? Appreciate any help or ideas. Brent

Hi Crank,
One possibility is that you are picking up cell images along with the cordless. You didn`t say what model scanner you have, but unless it`s triple conversion, I`d put my money on it. Hope this helps.
--
Happy Scanning,
Charlie

I didn`t do it.
Nobody saw me do it.
You can`t prove anything!

Hi All ...,

Guess this person doesn't live in california.....In this part of
de woods ....the pro-4/5/6 series sells for between $225 and $250
at a brisk pace..... seems the sloping panel and availability
of the Nuts and Volts computer interface (for the 2004, low
priced)....makes this unit "HOT" merchandise......I kinda like
the 5/6 myself but "thats people for you " ....All three units
are superior in "MANY" (esp shielding and overlaod) to my
pitiful pro-2042 / os535.....and so it goes.....

ALL ......an interesting alternative to all the hassle about being
worried about the cellular ability of a scanner , is just to have
a special handheld that is dedicated to cellular only , one that
can be computer controlled if you want, one that is of commercial
quality and performs (on cellular) better than any scanner made,
and one that only costs $79.00 brand new and often sells for
$30 to $40 well used........ one that has numerous computer
possibilities and that "ALL" of the software is free.......
IF you had this unit , you could buy scanners with "NO" concern
about cellular abilities and rest a lot easier.............
Its just a thought ...... its what I would do if I listened to cellular

(which I don't because it not legal anymore [ya sure]).......

additional features of the above cellular scanner are battery or ac
power ...portable or base use.....hands free...."TALK BACK" if you
want (?)....etc.....SUCH A DEAL......

Hi Ron ,

Bet you never expected all this huh.......

If you want a cheap and easy way to get ctcss just get Wintone
from steak sandwich (but don't use the crack found all over
the place) and pipe the disc out from your scanner to the
sound card of your computer...thats all...wintone does the
rest...even tone squelch and all..... The best recent ctcss
(on the pricey side) was the (now deceased) pro-2042 and the
os-535 card running (in my opinion) probe software. Probe
lets you do just about "anything" you can imagine (every thing
mentioned in the other replies) with ease.....the os-535 comes
factory stock with ctcss (and lots more) and probe exploits it
wonderfully).........

steak sandwich www.steaksandwich.com .....

http://us.box.sk/astalavista-usa/ .....

I've heard several undercover busts here in Simi Valley, Ca where I live. One day I was going to the grocery store and listening to my scanner (never leave home without it). As I was walking up to the door I caught some units on one of the surveillance freqs. I was just about at the door when they mentioned that the suspect was in the store at the time. I immediately turned down the volume on the scanner and went back to my car to wait for them to bust them. Once they were code-4 I went and got my groceries :)

Glad to see you agree,

Its certainly more to the point of the original post and directly
to the point that information (and freedom of thought)
should be (and is) free..... Despite those out there that would
choke off free thought and information for the elite....(so they
think) People (in general can't be trusted , so they think)
should be limited in what they know for their own good (and the
good of the share holders of commerce) ehh ....

i said that sir .... thank goodness for people like DrWho and
1Opht and all the rest .... radical constriction of free speech
and thought just doesn't play in this country.......not amont us the
majority main streamers anyway ....

>Frank

When you add a "whip" to the top of a discone it is also necessary to
assure that there is an adequate counterpoise for that same frequency.
Mounting the discone on a mast of 1/4 wavelength at the lowest
frequency to be received is often adequate.

Mike,
Looks like you may have hit paydirt with the poster who had the same problem with the same rig. Let us know how it goes!

This one's not a group post .. just curious where you work, since I (mis)spent several years in tv newsrooms in Lexington KY (NBC and ABC affiliates, late '70s through late '80s). So, of course, when you mentioned tv newsroom, my overactive curiousity was naturally aroused.

I see a couple of "new" Mackey puppets have started posting in the last day or so. I'm still enjoying having him in the plonk pit.

Best regards,
Dave

Sorry Bill, can't agree with you on this one. The "ha ha ha" comment was way out of line but the price is also out of line. If the gentleman wishes to truely sell this item, then he should drop the price at least $100. You and I both know you can get a "mint" pro-2006 for $250 or less.

Hi,

I would like to have a sepperated connector for the discriminator output
of my
MVT 7100.

Do you have experience with modifying the Yupi ?
Where can I find the discriminator output ?
Can I solder it straightly to a connector, or do I have to uncouple it with
a capictor ? (which value ?) etc. etc.

Thanks in advance,

Hans

I had a Pro-23 that accepted the test mode that produced the 888.960 frequency in channel 15 (I think). It worked just fine until I traded it to a friend of mine for something else. When I attempted to demonstrate the test mode to him, it would not load the test frequencies at all. I tried it several times and it didn't load them. What could possibly have happened to cause this? The unit has never been opened and is in mint condition, purchased new from Radio Shack about two years ago. Please post any replies. Thanks in advance.

Hi all,
The EDACS system here can be configured (I suppose its the same the world round) for all sorts of things - like beeps or no, dummy data burst every 2 mins or so, or continious through the channels (capacity allowing, of course) or none, and the ultimate - AEGIS digital voice. Even dwell time is configurable, and all these parameters can go through a wholesale change when a network emergency is declared. For example, non-emergency dwell time is 200 ms, emergency dwell time is 3 seconds, complete with 'emergency declared' warning tone. Nifty!

Source record: 153335
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

This professional Spectrum Display Monitor is designed for use as a panoramic signal display for VHF scanners and Communication Receivers such as Icom, AOR Realistic etc. The SDM-42A displays all signals present in the receiver's IF on a 5" CRT so that the operator can monitor signal activity up to a full 10mhz wide. The operator can then quickly tune to signals as they appear in the spectrum display. This greatly facilitates locating and tuning of intermittent signals as well as surveilling a particular frequency band. This unit has been used in a

hobbiest environment not a professional one and is in excellent condition. Asking $750.00 plus shipping.

1242. BETTER THAN SEX !!!!! (well almost) ---- 6:45pm last night in Atlanta!

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: *dbenson@mindspring.com
Message-ID: <6o58pbbni1@samsara0.mindspring.com>
Source record: 153337

6:45 pm
Norcross, GA
Thursday, July 9th

I was pulling out of the parking lot at work (for those of you in Atlanta, I work on Jimmy Carter Blvd. Near Buford Hwy.) My Pro-90 immediately locked on the Gwinnett County Undercover ID. I don't have a recorder, so I'll re-enact it as close as I can remember.

"Number 1 is going into RW Goodtimes" the first voice said.

[RW Goodtimes is a big arcade/amusement center primarily for adults, because they serve alcohol]

"Where's the CI?"
"Parked in front of the building." (I didn't hear what kind of car)
"I see it"
"Number 2 is parked in the Waffle house across the street. It's a white over grey explorer"
"The explorer looks unoccupied at this time"
"Look for two black males. Maybe they're inside the Waffle house."

"Alright does everyone know who's who?"
"I'm still not clear on C1"

At this point I'm approaching RW Goodtimes, which is about a mile from my office, right on a major North/South Interstate 85. I pull into a convenient store next to RW and continue listing"

The communication picks up considerably for the next 10 minutes. There seems to be about 10 undercover police at RW and at least one monitoring the Explorer at the waffle house. I don't see any of the police (that's good, since they're under cover) .

Apparently they are looking for a maroon vehicle as well as the Explorer to come to RW soon.

"Do you want her to move?"
"No, keep her there"
"There is an empty space beside her"
"Just keep her there"

"Two black males are getting in the Explorer, now"
"That's them"
"Get ready everyone"

"Here comes a maroon car in the parking lot"

"The maroon car is backing into the space beside CI"
"Right beside her?"
"Yes, the space right next to her"

"The Explorers moving"
"Number 1 has come out of the side entrance of RW. He's standing on the side now."

"Explorers heading towards RW"
"Everyone get ready!"

"Number 1 is going back inside"
"No one has gotten out of the maroon vehicle"
"Tell CI to sit still"
"Everyone know what they're supposed to do?"
"10-4, 10-4, 10-4"
"Here comes the Explorer"
"I see a white over gray vehicle. I can't tell if it's a ranger or an explorer"

[I'm watching the explorer pull into the parking lot at this time. I don't have a good view of the two vehicles in front of RW, but I'm not about to move and take a chance of screwing their bust up"

"It's pulling in the parking lot now"
"It's an explorer"
"There talkin now"
"Everyone ready"
"There's the explorer"
"Let go!"

[The radio goes silent. 5 or six people come from between cars and out of the building and swarm the two cars. At least four unmarked cars and a van pull out and block the two cars and the explorer in the parking lot. This all happened in about 10 seconds.

There was no shooting at all.

I noticed the other civilians in the parking lot stop and look around, like "What the heck's going on" and I'm thinking "Where have you guys been?" it's obvious what's going on.

The next thing on the radio was.

"Number 1 is on the move"
Apparently the guy that walked into RW saw what was happening and ran out the side or back and got in another car.

"He's pulling onto Jimmy Carter"

An entrance I can't see.

"I can't get him"
"He's making a U-turn and getting on 85 south" [this is the North / South Interstate right beside RW Goodtimes]

"I'm on him"

The next 10 minutes was the chase for this other car. They finally blocked him on a road about 10 miles away

"Good work everyone"
"It went good"

Then the communication dropped off considerably, just a few questions about when tow trucks were going to get there etc.

I've only had my scanner about 4 weeks - First one I've ever owned. I can't imagine it getting much better than this. I'm hooked big time.

I looked at my watch it was 7:25. I had been listening for about 45 minutes and it seemed like 5. I was late for a party, but what an excuse.

What kind of recorder can I get that will record from a handheld and still let me hear what's going on?

Thanks for the nice words!

I attribute my tenacity & standing up for whats RIGHT
to the way my parents raised me & to growing up in
the great State of Iowa, which remains my offical
state of residence even today.

I was raised to always do what is RIGHT, REGARDLESS
of what is popular or easy. Often times, the what is
popular or easy is NOT what is right.

When you do what is right, you know you are correct
in your heart, & that is what is important. THAT
is what makes INTEGRITY!

SOUTH FLORIDA TRUNKING GUIDE -- UPDATED VERSION NOW AVAILABLE!!

"This book is definitely one that you want to include in your scanning library"
Warren Whitby, operator of the Trunked Radio System User's Page

Containing the most accurate frequencies and Trunk Tracker (TM) ID's for the Motorola trunked Public Safety agencies in South Florida from Indian River County south to Miami.

Trunked systems covered include:
- Broward County (BSO, Fire-Rescue, all Local Government)
- Broward County School Board
- Fort Lauderdale (includes Pompano Beach, Wilton Manors, Oakland Park)
- Coral Springs (inlcudes Parkland)
- Plantation
- Deerfield Beach Fire-Rescue
- Margate Public Works
- West Palm Beach (inludes Riviera Beach, town of Palm Beach, and Palm Beach Gardens)
- Boynton Beach
- Miami
- Miami Beach
- WTVJ NBC 6 TV

Other non-trackable trunked systems are also included with frequencies and general information:
- Indian River County
- St. Lucie County
- Martin County
- Hollywood (ETRUNK infomation included)
- Miami-Dade County
- Coral Gables
- State of FL ASTRO digital system

Also includes operating tips for using and getting the most out of the Trunk Tracker (TM):
- Descriptions of trunking systems used today
- Comparison between the Trunk Tracker (TM) models
- Undocumented bugs
- Converting Motorola (TM) talkgroups to Trunk Tracker (TM) format
- Sources of information and help
- "Keyboard tricks" not listed in the manual
- Setting up Type 1, Type 2, Type 2i, and Hybrid systems

Latest edition is the 2nd edition mid-year update.

Only $9.95 including shipping.

E-mail me for ordering information (remove the "NOSPAM" from my e-mail address to send mail)

PALM BEACH COUNTY FREQUENCY DIRECTORY AND SCANNER LISTENER'S GUIDE

"Your book is OUTSTANDING"
- PBSO deputy

Tired of outdated lists? Tired of buying a frequency book only to find that it reads like a phone book? Tired of not knowing the correct frequencies to listen to?

Well, no more! Containing the most accurate frequency information available on Public Safety agencies in Palm Beach County, FL, the is THE scanner book you need! Included in this Second Edition:

- Frequencies for FIRE, POLICE, EMS, PUBLIC WORKS, MEDIA, BROADCASTERS, AIRPORTS, and AMATEUR RADIO.

- Frequencies are listed in two sections: by SERVICE and by FREQUENCY

- Detailed information, with receive & transmit frequencies, complete channel descriptions, CTCSS codes, and FCC callsigns

- A comprehensive listener's guide, with information on which agencies cover the various cities, which channels are used, 10-codes, signal codes, Sheriff's Office district maps, EMS district maps, MED-COM Radio system, PBIA runway map, Florida Scanner laws, and a huge glossary of radio lingo & terms.

- Now includes a Trunk Tracker (TM) section, with frequencies and ID's for the Public Safety trunked systems in the county

- PLUS, included with each book is a condensed frequency list, a 1-page list of ALL Public Safety agencies in the county, including Trunk Tracker (TM) codes. Perfect for portable use!

Whether your're a resident of Palm Beach County, or just a visitor, this is what you need for complete Public Safety monitoring!

Only $9.95 including shipping.

SPECIAL OFFER! Buy the Palm Beach County book and South Florida Trunking Guide together for $17.95!!

E-mail me for ordering information (remove the NOSPAM from my e-mail address)

I'm having a problem with my R-10 getting it to clone from my PC. It works fine reading from the receiver, but when I edit the .icf file, save it, and try to write it to the receiver, it doesnt work. The display on the radio goes to "Clone In", and the first of the "progress arrows" shows on the display under the clone in wording. However, thats all it does. I've left it alone for as long as 20 minutes and it hasn't changed. Anybody had this problem or have any ideas as to a solution?

Thx,
-K2

From earlier this spring:

Newsgroups: rec.radio.scanner,aus.radio.scanner,alt.radio.scanner.uk,alt.radio.scanner
Subject: Definitive answer:MVT7100 discrim output
Date: Mon, 06 Apr 1998 06:39:28 +1000
Organization: Tasmania's Access Server Pty Ltd

Hi all,
After much of the weekend looking for the real discriminator output on
the Yupiteru MVT7100 receiver, I have the following to offer.
The discriminator output (for Narrow FM) appears on pin 9 of the TA
31136 sufrace mount chip on the IF board. However the output level of
this is pretty high, and I have found that my Hamcomm slicer interface
works well (and this is probably recommended) if you tap the
discriminator not at this point, but on the other side of the 56k
surface mount resistor which takes the unde-emphasised audio to pin 8 of
the 4066 surface mount IC.
If your slicer interface does not like the lower level, I guess you
could take the high level output, but make sure you use some form of
protection against shorting, such as a 5K ohm bleed resistor.
Now, some interesting things: This point that I mentioned here works
perfectly for PD (pager Decoder etc) but I really wanted it to look at
an EDACS control channel, 9600 bps, which it did not do initially.
Switching the radio to AM mode worked! I have one theory on this: the
output that I describe is constantly on, but selecting different modes
alters the bandwidth, with AM selected over FM seeming to give a
slightly wider bandwidth, which helps in decoding fast datastreams. The
damned thing even worked when selecting SSB (work that out!) but no
output is detected for wide-FM.
So, there you have it. If your discriminator tap doesn't work using

this info, try bleeding off a higher level output, and try selecting AM mode.
Thanks - Jason

<Cell phone towers broadcast to any receiver set to the TX frequency.>
The "output" frequency, yes. But, cellular towers are secured so that ONLY a single phone can receive the transmission. With digital towers (TDMA), it is even more so.

<It's not random.>
Certainly is. A company can place one anywhere, anytime, or turn one on or off at any time under any circumstances.

<That only applies on 2 metres. On 70cm it is 5MHz. On 10 metres it is <100KHz.>
I was only talking about 2 meters. Sure, and on 1.25m it is 1.6 MHz. So...?

<Such dedication. I hope you succeed in fixing them one day.>
Dedication? I only said every day, not all day. Also, there's nothing to fix.

Hello!
I have Yupiteru MVT-7000(mint condition).
It is japanese popular handy type scanner.

For sale or trade for your radio.

I wait your information.

Specifications of MVT-7000
Frequency Coverage:8 - 1300 Mhz (100Khz - 8Mhz at reduced
sencitivity)
Output:Audio 130mW into 8 ohms
Modes:AM,FM,WFM
Memorys: 200
Dimensions:64.4(w) x 160(h) x 41(d) mm

Features

Super Wideband coverage
Memory Search and Priority Scan facilities
Extended receive
Large LCD backlight for easy viewing of all functions
Rotary tuning knob
Signal stength meter
Channel pass function
Attenuator
3 way power
Battery save

If you see HP, please see it.

1275. For Sale: BC890XLT Police Scanner

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: BCreasey@juno.com
Message-ID: <35a5639a.431843@news>
Source record: 153389

Would you like to know more about what is happening in
your local community? Buy this Bearcat BC 890XLT
scanner and you will be able to hear all of the action.

For those of you not familiar with this base/mobile
scanner, it has the following features:

1. Turbo Scan - Scan and searches up to 100 channels
per second.
2. VFO Control - Turn the variable frequency oscillator
tuner to select the desired frequency or channel.
3. 200 Channels - You can program up to 200 frequencies.
4. 10 Banks - Each bank contains 20 channels.
5. 29 - 956 MHz - Frequency range that can be searched
(not totally continuous from 29 - 956 MHz).
6. 10 Priority Channels - You can assign one priority
channel from each of the 10 banks.
7. Weather Alert - Lets your scanner function as a severe
weather warning radio.
8. Auto Store - Automatically stores all active
frequencies within the specified bank(s).
9. Auto Sorting - Programmed frequencies are
automatically sorted within each bank for faster
scanning.
10. Auto Recording - You can record from the scanner
onto a tape recorder.

The scanner includes the power supply, original
telescoping antenna, and operating manual.

This scanner currently sales on the Internet for
$259.00. The scanner is in great condition and I am
asking $175.00 or best offer.

If you are interested, please e-mail me.

Pay no mind to the halfwit (skanman@MCI2000.com)
who replied to your post. He responds that way
to most "For Sale" posts. The poor sap is unemployed
and can't afford the better things in life for
himself, so he demeans and debases those who are
willing to work for what they get.

Your asking price of $275 for a PRO-2004 in
clean, pristine, good working condition isn't
unreasonable at all. You might need to come
down a little for a quick sale, but I'd say
you're in the ballpark.

You must BE John Mackey in not-so-clever disguise, yes? John IS the newsgroup bully - or he is trying to be. Ever notice the way he wants to control everyone else? Everyone else is the problem, not Johnnie. Typical delusional bullcrap.

Mackey is the problem. If HE quit posting the crap, it would stop. Just like that. But he won't because he enjoys it. And if he enjoys it, nobody is a bully. Logical, no?

1288. VISAR question

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: footage@panix.com
Message-ID: <footage-ya02408000R1007980029250001@news.panix.com>
Source record: 153402

I use a Motorola VISAR for most of my local monitoring. Here's my question: the audio jack takes a standard 3.5mm miniplug, but when the earpiece plug is fully inserted a loud tone (the standard "error" tone) is heard, overriding all other audio. Is this a malfunction, or is a special proprietary Motorola earpiece necessary?

I have tried the inexpensive Motorola earpiece used for the FRS radios, and it works fine if the plus is inserted only part way into the jack, but obviously it won't stay put.

Any advice? Many thanks.

Hey Allsafe:

Got your e-mail, but I'm confused. Whatever
you were talking about ain't what I was
talking about.

The thing is, I can't e-mail to you. I got
this flakey reply from Webmaster@netwit.com
asking me to not send any mail there as there
was no such animal as "allsafe".

The guy was nice enough about it, but very
decisive that I shouldn't be sending e-mail
there anymore.

Confused......

;-)

Ohhhhh, I remember what you're talking
about now. Nooooooooo, don't sweat that
thing. I did it for external reasons;
not you.

You know....certain slimebags and snotballs?
They have a way of taking liberties and
helping themselves, so I just made it a
little harder on 'em is all.....

Not you. Nothing to do with you.

;-)

1292. Where can I learn to use a scanner?

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: temmett@my-dejanews.com
Message-ID: <6o4ddq$16l$1@nnrp1.dejanews.com>
Source record: 153406

I just purchased a Bearcat bc144xl scanner without having the first clue about using it. It did not come with a manual and so now I am a little confused? I have so many questions I don't expect someone to answer all, but if I could be lead to a site that has the answers I'd appreciate it.
What is Squelch?
How do I input the frequency I want when only two digits can be displayed on the scanner at one time?
Can I go to any specific frequency within the range of the scanner?
What is a "channel?"
I live in salt lake city so I should have a lot of frequencies available but everything is loud fuzz, why? The Weather station is the only clear station.

Thank you for your time,

Tyson

1293. antenna options?

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: bbbuzz@banet.net
Message-ID: <35A5A694.411D@banet.net>
Source record: 153407

I need help in coming up with a viable antenna option for my situation. I live in an aprtment complex where I am not allowed to attach anything to any part of the building, fence, etc. I live at the top of a very large hill in Central Vermont so expect that pretty much antenna will be better than nothing. I listen with a BC200xlt and would need an option to cover pretty much all freq's (being in VT there isn't enough of any specific range to really take that into consideration.) Any help would be greatly appreciated. TIA

-Buzz

1294. Re: Discone as a TV antenna?

Newsgroup: rec.radio.scanner
Date: 1998-07-10 00:00:00 UTC
From: Emil Blaschek <Emil.Blaschek@siemens.at>
Message-ID: <35A5ACC2.41C67EA6@siemens.at>
Source record: 153408

to recieve a TV signal is no problem,
but a DISCONE takes the signal from all directions,
so you get a lot of reflections.
a reflection looks as if you see the same picture twice.
a prime picture and the same picture a little bit to the rigth again.
so you will hear a good signal, butthe picture will be very awful.

Well, right there, you're pretty much out
of the realm of "viability".....and into the
realm of deep compromise and lesser of evils.

> I live at the top of a very
> large hill in Central Vermont so expect that pretty much antenna will be
> better than nothing. I listen with a BC200xlt and would need an option

> be greatly appreciated. TIA

You're really out of "viable" choices, aside
from messing around to see if one thing works
better than another, There are no guarantees.

A lot depends on the construction of your
apartment and what access you have, if any,
to the attic.

You might could home-brew something for the
attic, like an off-center fed dipole maybe.
Or, even install a TV directional antenna up
there in the vertical plane.

If no attic access, then MAYBE a magnet mount
vehicular scanner antenna atop the refrigerator
would work....MAYBE. No guarantees.

Basically, you can't get blood out of a turnip,
and expenditures of time and money are not
apt to improve on the situation.

Try the magnet mount on the 'fridge if you
have some cash to burn. Radio Shack has a
decent one.

From: Mike Derryberry <michael.derryberry@MCIONE.com>
Message-ID: <01bdabd5$accc5d20$d24b37a6@default>
Source record: 153412

Last question first, no I'm not tired of you asking the same questions I've asked myself. I have been able to re-create the problem on the bench (covers removed) but it's random just like when they are in use. I've changed the volume controls (more than once) and searched for bad solder joints. Nothing ...

If you can come up with a possible fix, you're a better man than I. I'm perplexed and frustrated, to say the least.

I'd junk them and buy new scanners but they work perfect for us in all other aspects. (that and the company really doesn't want to spend that much money, hence my looking for a fix)

Any ideas or suggestions ???

Mike

I added a Whip cut down to 66 inches (for CHP) to my radio Shack discone
and it made all the difference in the world. Works great, without the whip
low-band was marginal at best.

Thanks for the nice words!

I attribute my tenacity & standing up for whats RIGHT
to the way my parents raised me & to growing up in
the great State of Iowa, which remains my offical
state of residence even today.

I was raised to always do what is RIGHT, REGARDLESS
of what is popular or easy. Often times, the what is
popular or easy is NOT what is right.

When you do what is right, you know you are correct
in your heart, & that is what is important. THAT
is what makes INTEGRITY!

i have a bearcat 300 that works pretty goo,ther is some mild distortion on
UHF
in the area of 453mhz,,,,on vhf hi it i very quiet,,,althoigh there is some
distortion
on uhf ,the unit still has a good receiver....
any ideas

1316. Chat abouit COPS while it's on...it's fun! :)

Newsgroup: rec.radio.scanner
Date: 1998-07-11 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <35abd8f4.29050156@news.mindspring.com>
Source record: 153132

Hi all! I've been trying to figure out a way to drum up traffic to my Calling All Citizens site for over a year now! Taking a cue from the highly successful integration of the Art Bell radio show with an internet audience, I am now tying in our chat sessions with the television show COPS...although I am in no way affiliated with them.

I am sending this message out hours before COPS goes on the air at 8 PM EST. I am inviting you all to join in the chat as we all watch the program together critiquing what we see, making fun, applauding, and otherwise just shooting the breeze. You'll need your net connection and a good TV, and working fingers for the keyboard.

You'll also need the URL to the chat room. You can point your JAVA-capable browser to:

http://members.aol.com/truth400/chat2.htm

I'm not so sure this idea will work, so I'll be monitoring turnout etc. for ways of fine-tuning it.

For background, my site is a monument to the issue of OPEN BROADCASTING. It advocates through philosophical discussion and the occasional action, the open-airing of basic public safety radio communications for public benefits. This rhetoric was born out of the increasing trend towards trunked and digital radio systems that shut scannerists out. You can learn more about this at the Calling All Citizens website at:

http://members.aol.com/truth4000/page1.htm

As a side note, the reason I've picked the TV show COPS as an audience magnet is because as scannerists, we tend to enjoy watching police work and catching the bad guys. The concept of chat running alongside a running TV/Radio broadcast has worked great for the Art Bell radio show and I believe it will work for this.

Hope to see you all there!

Dave
Are your local police going undercover?

>I've got news for ya, child. I didn't say a single untruthful thing.
Complain
>away, baby.

Hmm... "Baby"? That reminds me of you. You have all the appeal of
a paper cut. Even lepers avoid you. You are a fiend and a sniveling,
back-boneless coward, and you have bad breath. You are
degenerate, noxious and depraved. I feel debased just for knowing
you exist. I despise everything about you. You are a bloody nardless
newbie twit protohominid chromosomally aberrant caricature of a
coprophagous cloacal parasitic pond scum. And I wish you would go
away.

Hahahahahah...

>Keep your nose in your own business and I won't have to slap you around
>constantly.

I'm sure you do enough of your own slapping around, so don't worry about me.

You're a putrescent mass, a walking vomit. You are a spineless little
worm deserving nothing but the profoundest contempt. You are a jerk, a
cad, a weasel. Your life is a monument to stupidity. You are a stench,
a revulsion, a putrefaction, a big suck on a sour lemon with a lime
twist.

You are a bleating foal, a curdled staggering mutant dwarf smeared
richly with the effluvia and offal accompanying your alleged birth
into this world. An insensate, blinking calf, meaningful to nobody,
abandoned by the puke-drooling, giggling beasts who sired you and
then killed themselves in regret for what they had done

<cackling>

>Must be pretty cool to be 15 and in the house late on a Friday night.

ROTFFLMFAO!

Your hand even refuses autoerotism. You are
unreservedly pathetic, starved for attention, and lost in a land that
reality forgot. On a good day you're a half-wit. You remind me of drool.
You are
deficient in all that lends character. You have the personality of
wallpaper. You are dank and filthy. You are asinine and benighted.
You are the source of all unpleasantness. You spread misery and sorrow
wherever you go.

I cannot believe how incredibly stupid you act. I mean rock-hard stupid. Dehydrated-rock-hard stupid. Stupid so stupid that it goes way beyond the stupid we know into a whole different dimension of stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed on itself so far that even the neutrons have collapsed. Stupid gotten so dense that no intellect can escape kind of stupid. Singularity stupid. Blazing hot mid-day sun on the warm side of Mercury stupid. You emit more stupid in one second than our entire galaxy emits in a year. Quasar stupid.

Stick your head in your floppy drive and type "Format a:".
Your intelligence is a Kronecker delta function which spikes at the value "moron". You are too stupid to live. Go down to the glue factory, where they dispose of old horses, and volunteer to be disposed of.

<giggling profusely>

Nothing here was untruthful, either!

Oh, and by the way: "PLONK"!

Hi all,I just drove 25 miles to pick up a new pro 64 for 99.95 + tax=$106.00,but I first wandered into the pawn shop next door!!! Of course I asked if they had any scanners and the salesman pulled out a small box containing a pro 43!! I inspected the radio,it was in very good condition,not excellent ,not mint,lots of little scratches on the plastic case,and a tiny chip of plastic missing onthe bottom left corner,but you really have to inspect the radio to see it!! I turned on the unit and it was picking up airplanes and air traffic beautifully,as someone had them programmed into the scanner!!!
I was impressed with this radio more than the new pro 64 and it is definately modifiable as the date code is 3 A3,and it is the 20-300 model !!
After 15 minutes of bickering I walked out with the radio for $44.50 + tax=$47.00....I know this is a fine radio,but what are they worth if I were to buy one on this group in very good shape???
I probably should still have picked up a pro 64,maybe next week,there were 5 of them....
Thanks in advance, Burt

> Yep! Mackey *loves* weekends!

Typically, yes. And I looked for a massive
Mack Attack this weekend (and last - see the
thread called COMING REIGN OF TERROR), but
since I called for it in advance, he is
likely laying low to make me incorrect.

Which is fine with me. I'd rather be
wrong than right in this case.

> For now, I use just the filters in my client, but how would I set up a
> server-side killfile for AT&T and/or MSN? I will ask them sometime -

Don't bother.....large ISP's won't pass the
time of day with you or let you near the servers,
with singular exception if you have a Unix Shell
Account. THEN it might be possible to access
your own disk space and drop in some scripts
and stuff to keep an eye on things for you.

Otherwise, your choices are few:

1. Put up your own server, either a Unix box or
a Windows NT Server on a more or less direct
link to the Internet. SOME ISP's will even
let you put your own machine and software on
their premises and then let you manage it by
a remote connection.

2. Stick to the client side of operations, but
whenever in doubt, use the "Remote Mail" features
of your software to take a peek on the remote
server BEFORE commiting to a download. For sure,
Windows Messaging and MS Outlook 97/98 have this
Remote Mail feature where you "peek" and delete
anything suspicious before commiting to the download.

I could put up my own NNTP server and filter the
flow from the uplink, but there is no technical
difference there from filtering down and the
client side before downloading newsgroup stuff.
Actually, the client side is better for NNTP stuff
because there would be less of a load on the server,
in this case, YOUR server, if you had one. It
doesn't make much sense to run your own NNTP
server unless you're just doing some private
newsgroups for a small audience.

Client-side NNTP work is MUCH LESS demanding on
the CPU than server-side, for obvious reasons.
But I admit it is nice to have your own Web,
FTP, ILS, and SMTP/POP3 servers. In my case,
I can slap a gunny sack over ANYTHING that
even smells like Mackey or Queenie, and hose it
before it ever finds a comfortable place on
the disk.

> I haven't had much time lately. I am boning up
> on my CW (not to mention
> getting into SkyWarn) for my General ticket...

For whatever it is worth.....it looks to me
like you have some computer skills above and
beyond that of your casual dork....and possibly
like you are going to make computers your life's
work. If so.......bear in mind that it is very
difficult to be good at more than one or two
things.....the implication being don't let ham
radio interfere with your main thrust into life.

The mitigating factor there is that radio and
related electronics ARE very closely entwined
with certain kinds of computer work....so my
intent wasn't to dissuade; rather to warm you
up to the idea of focusing on whatever it is
that is to be your Life's Work. Don't get too
distracted. Any time you doubt this tenet,
imagine the power of a magnifying lens on a
piece of paper when plain sunlight is focused
on it. But out of focus, and it's worse than
no lens at all.

I know...I know.....at 15 yrs, a body NEEDS
distractions just to cope....but betwixt the
ladies and 'hanging out', there's not a lot of
room for more defocusing in those who are headed
somewhere.

In a word, ham radio will last you all your Life.
You needn't be in a hurry if it means other

important things will be sacrificed.

Your Life's Mission should remain in the
forefront of your mind at all times. And
if it is, that's about as close of a guarantee
to success as it gets.

;-) <wink>

Pity there are only three firm guarantees on
this planet: death, taxes, and Mackey....

I've found that a discone makes a lousy TV antenna due to lack of gain. Even the butterfly UHF antenna that came with the set does a better job.

You did well on BOTH! That PRO-43 was
easily worth twice the price and the
PRO-64 is almost as good, sans cellular,
but it is easily computer programmed,
whereas you have to retrofit the PRO-43
for computer programmability.

You made out just fine, guy.

temmett@my-dejanews.com wrote in message
<6o4ddq$16l$1@nnrp1.dejanews.com>...
>I just purchased a Bearcat bc144xl scanner without having the first clue
about
>using it. It did not come with a manual and so now I am a little
confused?
>I have so many questions I don't expect someone to answer all, but if I
could
>be lead to a site that has the answers I'd appreciate it.
>What is Squelch?

Squelch chops off the sound when the signal strength is too low. (i.e. all
that fuzz is a channel with no signal.) If you have the squelch all the way
down, the scanner won't skip to the next channel, turn it up a bit until you
don't hear the fuzz.
>How do I input the frequency I want when only two digits can be displayed
on
>the scanner at one time?
Don't know. You should check into getting a manual from Bearcat. There are
sites out there that should have the company's address.
>Can I go to any specific frequency within the range of the scanner?
That should be possible. You need that manual. Scanners are a bit anal in
that you usually have to program a channel with the frequency, then goto
that channel. Many scanners can scan anything between two frequencies. Me,
I want a dial to twiddle. (As soon as I get a computer interface board for
my 2006, I'm going to write a virtual dial program!)
>What is a "channel?"
It's a just a specific frequency to listen on. Scanners used to need a
crystal for each frequency. Now, thanks to fancy curcuits and cheap memory
chips, a channel is just a "place on the dial that you want to listen to."
>I live in salt lake city so I should have a lot of frequencies available
but
>everything is loud fuzz, why? The Weather station is the only clear
station.

Turn up your squelch until the fuzz goes away. Check at the local Radio
Shack to see if they have a scanner frequency book. If they don't, you'll
have to hunt up a speciality radio store, or find a web site by some
semidemigod that covers your state. <Play: We're not worthyx3> In Ontario,
it's http://www.members.home.com/ontscan/hotlinks.html you could cruise the
links and see if you can get somewhere useful to you.
>Thank you for your time,

Hey, it beats listening to cell phone traffic. Anyone got a Cantonese to
English conversion program? (Toronto has the largest Chinese population of

any city outside of China--and <smile> they ALL have cell phones! And if you're ever in Toronto try the Dim Sum! [Elderly ladies with carts roving the restaurant, and no English--"What is it?" "Try! Try! Is good!"] But head for Agincourt rather than Kensington.)(Or any food. Toronto attracts most of Canada's immigration--and they all open restaurants. We born Canadians? Well, we eat well! [If only I could get some REAL Montreal style smoked meat!])

1345. Apology/MY recent post

Newsgroup: rec.radio.scanner
Date: 1998-07-11 00:00:00 UTC
From: tech <tech@dp.net>
Message-ID: <Pine.BSI.3.95.980711202831.17511A-100000@home.dp.net>
Source record: 153161

Regarding my recent and only post:

My MOST HUMBLE apologies extended.....

I thought I was making a legitimate point. It appears I wasn't.
I don't have filtering capabilities as some of you suggested, EXCEPT to delete this News Group from my list, so I shall. Thanks to those who did offer the suggestions anyway.

I DID NOT (or wasn't trying to) place blame on any certain individual. I admit, I did name the two whose names I've seen endlessly mentioned as alledgedly being involved. I do NOT know what or who started it ("IF" it IS even them), or who is feeding the perpetual feud, nor do I care. That wasn't my intent. To those I did mention, I apologize for any inconvenience or trouble it may have caused you.

If you folks enjoy this, that's your thing, not mine. I'm outta here. I just thought it would be nice to see peace here and the N.G. used as it was intended. Guess I am WRONG.

I apologize for the intrusion and trying to care. You'll not hear from me again to help or even to ask for help regarding scanners and the like. Apparently, that isn't what this news group is truly for.

Carry on, folks!

Lou

> (the artist formerly known as "Cactus Jack")

Santa Claus operates on an 800 MhZ. Digital Trunked system, so not any
luck there, but here are the frequencies:

Motorola Type II-Astro
860.3875
858.3875
856.3875
859.9875
857.9875
855.9875

Santa Claus dispatching can be heard in conventional mode on 35.060,but you'll only be able to hear the dispatcher. Remember tbat most communications happen during Christmas, however occasionally Santa likes to talk to the elfs via radio.

: :I don't mean to criticize, but a cellular tower isn't a repeater.
:
: Not as such although it does act as one.
:

It doesn't really act as one. The cell tower is the base station and the phone is the mobile. This relationship isn't a repeater. It would be a repeater if the cell tower rebroadcasted the mobiles voice over another frequency and usually it just passes it along to a land line connection. However, if the cell tower is retransmitting the mobiles voice to a satellite, then its a heck of a repeater!

1364. Icom PCR-1000 Owner Survey

Newsgroup: rec.radio.scanner
Date: 1998-07-11 00:00:00 UTC
From: John <mcdermon@usa.net>
Message-ID: <HqIp1.3964$0M6.305081@news.mci2000.com>
Source record: 153181

How SATISFIED are the OWNERS OF PCR-1000 radios? I'd be interested in the opinions of other owners about the following:

1.) Icom's refusal to publicly document the command protocols?

2.) Icom's refusal to provide a simple BACKUP/RESTORE utility for EEPROM contents which THEY SAY are easily corrupted by "third party software"?

And how satisfied are you in general with the radio as supplied by Icom. On a scale of 0-10, how would you rate the following?

A.) The radio hardware itself.
B.) The Icom supplied software.
C.) Icom's support policies regarding the radio.

Icom has repeated asserted that "The majority of our customers are quite satsified with the radio and provided software." I have my doubts about that.

How many of you use (or wish to use) third party or self-written software with your PCR-1000 radio? Icom tells me I'm one of only a very few who has expressed this concern! They simply state that the majority of owners are completely satisfied with their supplied software.

My ratings are:
A.) 8
B.) 2
C.) 1 (would be 0 except they DID repair my EEPROM data corruption once)

If enough people participate, I'll compile the results and forward it to Gary at Icom. Although its likely he lurks on this group anyway. If anyone wishes to add a category (write-in) go for it.

I totally agree with you on this. But turns out I AM a programming type.
Been making my living at it since '82. But it still frosts my balls that
Icom takes such a non-supportive posture when it comes to third party or
self written software for the PCR-1000. They act like you've just lost your
mind if you write your own code or even try out third party software. I
purchased the radio EXPLICITELY for its computer control nature - fully
expecting to be able to write my own software and/or use any software I
found that supported the radio. Never did I anticipate that Icom would not
only refuse to provide programming command documentation, or that the radio
could be so easily "damaged" in hardware by experimenting with alternative
software. I see these shortcomings as fatal flaws in Icom's marketing plans
for the radio. There reasons are unclear. Perhaps they believe they can
milk a little more revenue from third party vendors - but even if they do,
the revenue that generates will be insignificant to the damage they are
doing to their own name and reputation. I don't plan to let this issue die
a quiet death.

>>How can we best alert the rest of the world? Surely Pop Comm or Scanning
>>USA or some other publication will eventually put this little known fact
>>out for public consumption. Or are they all so much in Icom's pocket that
>>they're afraid to tell the truth. Icom sure isn't proud enough of this

>From what I have seen of the magazines so far the little black box is still
>the 8th wonder of the radio world. Their lead times are a month or two so
>time will tell how much they are in with Icom.

I think the radio itself IS indeed a neat package. Thats a big part of why
I bought it. But had I known how 'fragile' the radio was with respect to
its EEPROM corruption characteristic, and that Icom would steadfastly refuse

to provide any documentation on how to program the radio, I would NEVER have bought one. And when they stated that they would consider any future EEPROM corruption the same as a "hardware mod", thus voiding all warranty on the radio HARDWARE, I went ballistic! I think its only fair that Icom suffer the consequences of their own policies. Prospective buyers have the right to know what they are getting (and NOT gettting) when they purchase. Things I took for granted just aren't true. And it seems the game is changing every few weeks. Initially I was told (by Ron Spencer at Icom) that there would be NO FEE associated with the licensing of the protocols. Now they are saying there will be a fee, yet in the same breath they say that Icom will not stand behind the consequences of using even LICENSED third party software. Hey, I don't expect them to support the software. But they really MUST support the hardware regardless of who's software is used - especially so IF they have SOLD A LICENSE to the software developer. Icom is making up stupid rules and taking a "Its my ball and I'll go home if you don't play by my rules" attitude. If their rules made ANY sense at all, it wouldn't be an issue for me. But they don't...

No, I'm not mad at anyone at Icom in particular. In fact, I am a bit indebted to Gary at Icom in as much as he was instrumental in getting my EEPROM data recalibrated for me. And I know its not HIS fault that Icom management is so incredibly stupid. My disdain is aimed at Icom's policies - not the company or the radio itself. There are two simple things that would settle all of my concerns:

1.) Release proper documentation on how to program this radio.

2.) Provide a simple BACKUP/RESTORE utility to protect the fragile EEPROM contents when we are using third party software.

I think these are reasonable requests.

As I understand it (could I be wrong?), Icom says they are licensing the command protocols to third party vendors who meet their "qualification" criteria, and who agree to pay the $$$ fee, and who sign a non-disclosure agreement. What about those of us who bought the radio with expectations we could write our own software? Those who wish to use it on small notebooks, OS/2, Unix boxes, PDAs such as the Palm Pilot, etc.? Or those who have unique applications that are not supported by Icom or "approved" third party vendors. Speaking of which, I have heard that Icom is refusing to disclose which vendors are "approved". Thus, we are left to guess and hope we don't end up dumping the EEPROM contents if we guess wrong. And why would a third party vendor PAY Icom for a license if they aren't allowed to advertise the fact? This whole situation stinks more every time I learn more about it.

Yes, I KNOW there are unofficial "reverse engineered" command protocols posted on the net. I've got copies of all I think exist. But using them is risky business unless you've got deep pockets and don't mind paying Icom for 4 hours of tech time to realign your radio every time it burps.

This news Group is getting very disgusting to read. I come on here looking to either learn something or help someone and ALL I see mainly is this CRAP about Bill Cheek and some one named Mackey (?).

Look, if you have a beef with each other, do us all a favor, take it private, go whip each others butts and get it out of your system or go to court, WHATEVER. To tie up a news group with such on going childish behaviour, is for the birds.

If these are forges, ok, acknowledge it between yourselves and resolve to get to the source of it and clear it up once and for all.

I am to the point of eliminating this N.G. so I don't have to read this crap. The worst part is, a lot of it is cross posted to other N.G.s which interferes with yet more GOOD stuff.

I'm not placing blame on anyone particular. I don't know what this is about or who started it, and quite frankly, I don't give a damned. But this is STUPID to tie up the board like this.

I can't understand WHY people have allowed this to carry on as it has. Where are those who control this stuff?

I can recall when a operator of a N.G. e-mailed My ISP when I inadvertantly advertised on a N.G. I shouldn't have, JUST ONE TIME. He didn't even tell me. But yet this crap seems to be allowed to live on. And it too, serves NO useful purpose to this group or any other.

If you want to flame me for my direct and honest opinion which I think a lot have pretty much has already said, go for it. But I think the perpetuators of this crap ought to grow up once and for all.

Yes, you can replace the clock crystal with a higher speed one. The
unit will still function well at double the factory speed. Keep in
mind that delay time will be cut in half.

Brent Clark <jetguy1@ix.netcom.com> wrote:

:Just purchased a new Bearcat BC9000 scanner and tried to use it with my
:tape set up.
:I have a Sony Pressman recorder which has auto reverse on both record
:and playback which makes it a great little unit for recording scanner
:action. I had the unit hooked up to my Pro-2042 which with a patch cable
:attached to the RCA outlet record plug at the back of the unit worked
:great. I could just turn the unit on and once a signal was received the
:recorder would activate and record. I could record action also with the
:volume turned down and the recorder would still record at the correct
:level.
: Using the unit with the Bearcat attached to Aux at the back of the
:scanner will not activate my recorder.
:Attaching the patch cable to the line outlet at the front of the unit
:results in recording but you need to have the sound up to record. Is
:this normal? It's nice to have the sound down while doing something
:else, hence one of the uses of the recorder.

It is normal for the UBC9000XLT to work that way. It should be wired
so that the volume control has no effect on the line output.
I considered rewiring mine but now all I do when I want to record in
silence is to put an unwired plug into the speaker socket to silence
the internal speaker. I find that with the volume set to a comfortable
level the output at the line socket is right for direct connection
to the recorders mic input.

:I have set the channels and scanner to record correctly but the unit
:will activate only with the sound up and using the "Line" output on the
:front of the Bearcat.
:I suspect that the problem lies with the voice activation on my
:recorder, but the unit worked great with my Pro-2042.
:I assume that if I could use the RCA jack at the rear of the unit
:(Bearcat), that it may work similar to my Pro-2042.
:Anyone have similar experiences? Appreciate any help or ideas. Brent
:jetguy1@ix.netcom.com

You need to set the record function to activate on each channel that
you want to record on.

Barry

Here in KY the spring has been good to the garden - I've got more cuc's and tomatos than I know what to do with (everyone should have such problems), anyway I'm sure some other folk's gardens are doing quite well too.

This is about the time of year when the rural bush starts getting bent over with prop wash from low flying helos off to spot the evil weed (thank heavens those good fellows are on top of this!) and I'd like to listen to 'em.

Please mail any and all freq's related to this endeavor for the KY, TN, WV, and IN areas.

For you folks in VA you may catch 'em on 154.665 (VA State Tac with recently monitored helo traffic).

Thanks!

shan

>found that supported the radio. Never did I anticipate that Icom would not
>only refuse to provide programming command documentation, or that the radio
>could be so easily "damaged" in hardware by experimenting with alternative
>software.

I too am the programming type and bought it for the same reasons. I have
been programming it since about May and havent killed yet. Fortunately I
never touched the LDA commands that Icom's software uses at startup. I think
that is the achilles heel of the protocol.

<snip>
>Hey, I don't expect them to support the software. But they

>fact? This whole situation stinks more every time I learn more about it.

I know it just doesnt make sense at all. If Microsoft had done this back in Windows 3.0 days, there would be no Win 98 would there? Remember the Windows logo programs. Then again some may believe that would not be a bad thing at all. I cant hate microsoft, they have provided me living also with their monopolistic ways. Made my life easier really. Of course their openness is to secure standards, but what is a standard but just another excuse to revise it :).

>Yes, I KNOW there are unofficial "reverse engineered" command protocols
>posted on the net. I've got copies of all I think exist. But using them
is
>risky business unless you've got deep pockets and don't mind paying Icom
for
>4 hours of tech time to realign your radio every time it burps.

Stay clear of the LDA commands and binary commands. I have yet to try the binary modes for signal updates. If the binary mode is what I think it is, it is directly setting the registers of the controller/cpu like the old Hayes modems did. I think that is where the risk comes in since a poorly built bit mask could cause extreme changes in operation of the receiver.

Steve.

The KK6AN system is now on the internet via Real Audio.

freqs in San Francisco are:

440.475
147.975
927.625
secret 1200 and 6 meter links

usually linked to Militia System 224.16 W4BFA in SF Bay Area which is in the process of a hostile takeover by 146.55 K6CBL system- the shit is hitting the fan

On Sat and Sun we usually run the 40 meter swap net from 7.240LSB which starts 12:30-1:00 pm San Francisco time and the list gets read around 3 pm

also run the War Zone sometimes on 7.258 LSB

Lots of thrashing, name calling jamming, good tech talk both radios. cars, jet skiies etc.

224.16 has lots of gun control talk by well know authority fastpat@home.com

also check out www.rossisoft.com for links to jamming web page news updates

the POCRA as the RealAudio link is called is:
www.gothic.net:82/ramgen/poc.ra

note the colon before the 92

let me know how it's working out for you

1387. African Civil Aviation HF Logs - Kinshasa, Luanda, Libreville, Bangui, N'Djamena

Newsgroup: rec.radio.scanner
Date: 1998-07-11 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980711170409.26103H-100000@alfa.ist.utl.pt>
Source record: 153204

Hello

Here is a log for what in my opinion is the most interesting
airspace of the world: Central Africa.
Not only considering the different traffic crossing this area but
also the remote areas they cross. Any route in this area has its own
points of interest.
First I invite you to donwload the following file (Radar-View of
this airspace which was very busy at the time it was made - 2300UTC, July
10).

http://www.geocities.com/SiliconValley/Lakes/9420/shotex9.gif

Look at the most eastern route:
The flights cross the most remote areas of Africa: overflight the
Zaire river for about 400NM (between USDUP and KGI, Kisangani), western
Zaire's Rain Forest - between OPGAT and MERON waypoints. Then over western
Central African Republic - between MERON and IRAGA - and after it into
deep Sahara desert (crossing Faya-Largeau city in Chad).
Interesting is also the second route, from Lubumbashi, in south
Congo, to Djanet, an oasis in south Algeria: they fly over many important
cities (Lubumbashi, Bangui, NDjamena) but the most interesting is the
Tenere desert overflight (between BUNLU and IKTAV waypoints and specially
DIR VOR (Dirkou) which is in the middle of nowhere - it appeared some
years ago on a Rally Paris-Dakar report!).
There is also two more routes, less important: the first one is
used by by flights between Europe and Cape Town: over the famous Namibian
Skeleton Coast, Luanda, Libreville (look at SAA234 on the shot)...the
second one crosses one of the last areas were pigmees exist: western
Gabon/Northern Congo (between MIKMA and AMPIL waypoints).
I've not had yet the oportunity of overflying these regions: it
should be spectacular to see the landscape changes. The only problem is
that flights from/to South Africa normally are done at night.

Now about the aircrafts:
There were two very interesting: ETH950 from Lagos to Addis
(registration not known) and NGA2019 (Nigeria) from Jeddah to Lagos, a
DC10. Also it can be seen on the shot that these flights routes are
completely different from the Europe to/from South Africa ones almost
making a 90 degree angle between them.
Also it was interesting to listen to the Iberia flight from
JNB...Iberia launched this service only this summer.
So, and not to keep this email so long, here are the logs.
Hope you enjoy them.

Best regards, Andre Brandao

Unit is in excellent ++ condition cosmetically (always in its case).
Functionality and performance are perfect.

531kHz - 2039 MHz Full coverage ***no gaps***

Unit will be sold with its case, original box, antenna, original manual and copy of Rich Wells' instruction manual which helps the novice user gain quick familiarity with this receiver. No adapter supplied since this is a European version. Uses AA alkalines or NiCds.

Hate to see it go but need to sell to make way for a newly ordered AR 8200.

Will sell for $365. I will pay FedEx COD shipping (payable with money order/cashier's check/certified funds). Email or call:

Pete Mursak
540-669-7907 (anytime)

Hey everyone,

COSTCO (Price Club) is now carrying the Panasonic "Super-High Capacity"
nicads in a package of six. These are the 1100mAh batteries. Previously
you could only buy these batteries (4) packaged with the charger. These
items are COSTCO number - 213117 and the price is $9.99.

I have been using two sets of these batteries in my AR8000 for over a year.
They are very good and last about 10 hours in my AR8000.

Cheers

Thanks Phil... I needed a good laugh and you just provided it. One thing I noticed, I un-twitted Mackey and don't see any replys to Bill's (or anyone elses) post about his rogue cancels. Amazing, is he trying to lie low after his screw-up and getting caught ???? Makes you wonder what he's up to ???

Again, thanks for the laugh.

Mike

It looks like the metro Atlanta Georgia State Patrol units are migrating to the SouthernLinc digital IDEN radio system. The current VHF channel 155.910 seems to only be used when a unit is having dead spot problems with the new radio system. Apparently, the change has just occured, as some units do not have the IDEN's, and they are having to do traffic stops on the old system. I'm not sure if they will be rolling the new radios out to the other Troops elsewhere in GA, but supposedly the SouthernLinc network is statewide. Alabama State Patrol has already done a similar move. But again, I'm not sure to what extent.

>your money.
>

Despite the problems if you are willing to "risk" 3rd party software, the unit is still a good receiver. Great for HF work and with a good scanning program, it can handle scanning pretty good too. Still if you arent the programming type then your better off with a traditional scanner with computer control. If memory serves me correct, Uniden doesnt officially support the interface on the BC895 either.

>How can we best alert the rest of the world? Surely Pop Comm or Scanning

From what I have seen of the magazines so far the little black box is still the 8th wonder of the radio world. Their lead times are a month or two so time will tell how much they are in with Icom.

First off in Canada it is not illegal as long as you dont divulge or act upon the information overheard. I thought you might be interested in hearing the experience I had just recently when I setup shop 8 floors above a major freeway overlooking the Toronto's Don Valley Parkway (at the end of this post)

JD <*dbenson@mindspring.com> wrote in message
<6o5te8$2nb$2@camel29.mindspring.com>...
>I don't even have a scanner that receives cell, but I was curious.
>Let's say you are driving down the highway beside a car monitoring the
>occupant of the other car on their cell phone:
>
>Question one:
>How do you know if the frequency you are on is a tower or their phone?
>(as I understand it you would only get their side of the conversation)
>
Yes but crosstalk can also give you a hint. If one side is quieter than the other then you are probably on the phone side.

>Question two:
>If you are monitoring their phone, how could you find them on a tower?

In my experience it is difficult since there are so many frequencies to chew through in each band. Digital cell is not impervious to data skip functions on my scanners. They sometimes break through.

>
>Question three:
>What happens when they switch towers? Does the phone and tower
>frequency change? Or just one?
>
already dealt with in previous posts.

>Question four:
>If you are talking on an analog cell phone. Is there anything you
>could do to keep someone from monitoring your conversation on a
>scanner? Or make it more difficult?
>

During my little experiment I was catching mostly mobile cells in cars. They jumped cells so quickly (they were on the freeway) I was lucky to catch any meaningful conversations. In addition I was very close to downtown Toronto which has more towers than outlying areas. In Miss. the cells are larger and you tend to track them longer. I was disappointed as I expected very good cell scanning at this location but found it to be worse for these reasons. So if you want to make it more difficult short of going digital

then:

1. Keep moving and move very fast (freeways work well for this :)).
2. Stay out of suburban/rural area (less coverage there anyways :)).
3. Keep conversations short (cheaper in the long run and safer - see point 1 :)).

For the purists out there, I apologize in advance for any misconceptions or errors I may have made.

Steve.

That would be for ground crews, but definetly interesting, especially if you work at an airport.

I believe the original question pertained to company frequencies, for which one would probably search from about 128.5 thru 132.5.
If anyone has updated company lists, I'd like them too, mine are pretty old.

Source record: 153304

Can anyone explain why the following is happening....

Im scanning the 902 - 928 MHz range and im picking up on some cordless phone conversations, almost always after listening for 30sec to 1min I start getting a couple of beeps and then the frequency goes dead. I thought maybe it was the cordless phone changing channels due to static or some type of interference but I can NEVER pick back up on the same conversation. I continue to scan the 902 - 928 freqs but never find anything. Any ideas what might be happening? This seems to have just started occuring, I dont remember have this type of problem so frequently....

thanks for any inout on this...

I don't know about everyone else but as long as I am being nosey I some times like to know which side of the conversation that I am hearing is near me to determine who is where and/or who is who. This can be done by listening to the handset frequency. hope this info helps.

Signed,
MrWilk@juno.com (I am not sending this from my account)

In article <35A6E2EC.3DFDE29D@ix.netcom.com> you write:

>.. Using the unit with the Bearcat attached to Aux at the back of the
>scanner will not activate my recorder.
>Attaching the patch cable to the line outlet at the front of the unit
>results in recording but you need to have the sound up to record. Is
>this normal?...

Yes. I have two BC9000XLTs and enjoy them. But, Uniden's
line out jack is a poor implementation done to save money.
It's merely a resistor connected to the speaker output, ergo
the "line out" level varies with the volume control.

> It's nice to have the sound down while doing something
>else, hence one of the uses of the recorder.

Agreed 100%.

In addition to using a VOX recorder, I often connect the
line out jack to a modified baby monitor transmitter which
I use as a repeater to broadcast whatever the BC9000XLT
hears around the house.

Why does my and other owners of pro 2045's
from the shack pick up cellular imaging quite clearly from
895.000-912.000,when Ive read over and over on this newsgroup that
triple conversion scanners do not and will not pick up cell
imaging????Please no flames,Im curious,that is why I posted the question
of"Will the pro 64 pick up cell images in the same range as my 2045,they
are both radio shack triple conversion scanners!!! Thanks

1424. Question:How to find the frequency?

Newsgroup: rec.radio.scanner
Date: 1998-07-11 00:00:00 UTC
From: Ali Mehrabi <mehrabi@watervalley.net>
Message-ID: <35A71E4F.3C0D@watervalley.net>
Source record: 153313

There is a radio station which I am interested to know the carrier frequency of it. I received this station in Washington D.C. area. The radio which was receiving the signal was modified. The radio was a simple Panasonic AM/FM radio. They had modified the FM band and I could tell the signal was on a SSB band. So, there is no way to guess the fequency from the dial as it does not indicate the correct frequency or modulation. From how it sounded I could tell it was a SSB signal. I placed a sensitive frequency counter close to the radio but could not detect the carrier frequency. Can anyone give me a clue as how to find the frequency of this station? Thanks,

Ali Mehrabi

Welcome back, CB Rambo! Dang, where ya been dude?
You've missed a lot. Queenie Queenstrom has come
out of the closet in pursuit of her heroine, the
Mackey Snackie. And then Ol' Wacky Mackey has been
on a continual Mack Attack, complete with forgeries,
rogue cancels, and e-mail bombs. Good thing you
were gone - the Wacko would have loaded you up.

He might yet, now that you're ba-a-a-ack. So keep
a watch on your backtrail.

Anyway, welcome back, CB Rambo! You badass, you.

:-)

Hi all,I am wondering if anyone has any insight on my problem with my pro 2022...I have had
this problem since making my cell mod,which was a simple clip of a wire if I remember correctly,its been a whiie!! The problem is mostly on 800 megahertz,and some on 450-470
but nothing in 108-174.000..It is a loud bleed over type noise I hear directly with the broadcast,I used to be a big CB'er and the sound is exactly like CB bleedover,but I know its not bleedover because its everywhere,also,the higher the antenna is raised,the louder the bleedover noise!!! Anybody have any ideas???
My other unit Pro 2045,works fine,as do my handheld scanners in the same house,so its definately the unit!!! Thanks in advance,Id love to remedy this problem!!!! Burt

1437. Clean Up The Scanner Newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: cdeviney@ipa.net
Message-ID: <35a94033.19670981@news2.ipa.net>
Source record: 152928

Please Help - Suggestions Needed:

I think 99% of the people that use the two scanner news groups are sick and tired of the non-scanning related fighting. I am at a loss as to what to do about it. It just keeps on, and if anything get worse. I am also on Compuserve and AOL, and there is none of this ridiculous bickering and finger pointing, just questions and answers, which is what everybody is there for. I also do a few other newsgroups, not scanning related, and there is NONE of the name calling and insults.

Is there a person "in charge of" a newsgroup that could just delete all those as they come in? I am not exactly sure of the mechanics of a newsgroup and maintenance. Can the offending writters be prevented from posting for 30 days?

What about, if everyone uses a comment like:
"I found this post non-productive and/or off-topic" and the hundreds of us that use the scanning newgroups just hit the "reply to sender" button with the above comment? Surely the offender would get the hint if his/her mail box filled up with this comment.

Does anyone know what can be done about the few ruining these newsgroups for the many? Please post your helpful suggestions.

CATHY

P.S. I am not referring to genuine disagreements or advocating censorship....I think everone will know what the problems are that I am referring to.

I had a 2006 with the best antenna I have yet found. Ironically it is also one of the least expensive. The "Monitenna" from Channel Master. It comes complete with 50 feet of RG6 cable and the necessary end connector. for 50 bucks you could well spend 200.00 (as I had) and not beat it. If you cannot find it, call Glen at Scanners Unlimited (650)573-1624 and he can ship it to you. P.S. Go out and pick up a 6 ft. hunk of Schedule 80 PVC pipe to mount it on instead of a metal mast as it will allow you virtually omnidirectional performance. Good Luck

You could try a discone. Unfortunately, "strong coverage" and "omnidirectional" won't really ever happen. I would recommend several (at least three) antennas, and using an antenna/coax switch to switch between each antenna. My idea isn't conventional, but it works great. Read on if you want a better idea.

Strong coverage = reasonable gain, and omnidirectional antennas don't have a gain (or little should they have one at all). 5/8 wave antennas have a small gain - roughly 2-3 db gain, depending on the band.

If you wanted a really NICE antenna system, I would purchase or make a directional beam antenna and buy a rotor. These are VERY directional, and have very high gains. Gains on the resonant frequency (the band the antenna is tuned for) sometimes reach 25-30 db. Should you use it on a different band other than the resonant, you still can get gains up to 10-15 db (depending on how far off you are from the antenna's resonant frq), which is great.

Hope this helps.

No. They're the same radio. The only difference is that the 235 comes with an external charging cradle and an extra battery pack. If you order the charging cradle from Uniden, they'll send it to you for $25 or so and throw in a battery pack. So you'll still be ahead $25, assuming your $50 difference, and have the same setup.

1456. Re: Need some antenna advice

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: jungle jim <junglejim@delta.com>
Message-ID: <35A95F45.605A80B1@delta.com>
Source record: 152947

If you only want one antenna the Monitenna is the one I would choose again. I've had one in the attic for two years and it performs very well. I have other antennas that out perform it ut they are tuned for very small sections of the spectrum. The Monitenna is very wide banded and does well every where. At the low end it picks up CB too well. I'm not happy with the mega watt CB interference. For the Air Band 108-137 it picks up the airport ATIS station 20 miles away through thick forests and over hills. At the high end it does well in the 800s even through 50 feet of 75 ohm cable. For under 50 I don't know anything that will beat it except a full range TV antenna which is very directional (like a flashlight). If you can put a rotor on a TV antenna you might consider it. If not, then get the monitenna. Amatuer Electronic Supply sells them too. As well as Stark Electronics which might have the best price.

Best of luck
JungleJim the Antenna Fanatic

1459. Re: Clean Up The Bus Stations

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: Andy Ulrich <ulrich@null.net>
Message-ID: <6obq21$6i4@bgtnsc03.worldnet.att.net>
Source record: 152950

There aren't any simple answers to this oft-recurring set of questions by well-meaning posters. K4CC summed it up well, though. To expand further:

The Usenet newsgroups are somewhat akin to bus stations in big cities (at least bus stations here in the US). Bus stations serve a useful purpose, and most people visit them because they want the usual services of a bus station. Bus stations do a good job of providing the services they're designed for. Similarly, this newsgroup still serves its original intent of allowing an exchange of information about a particular topic.

But security in most bus stations is almost nonexistent. And partially as a result of said lack of security, other societal elements also frequent bus stations. Some are just curious; some have no other place to go; some are nefarious. We can't do much about that (at least not without getting into the political arena and talking about referendum or election and so on -- and that's beyond the analogy); the difference there is that the "normal" folks who are just there for a bus ride just ignore the shady characters around them. No one actually stands up in the bus station and says, "Why can't everyone just be nice? If you're not here for a bus ride, why don't you leave?" In a bus station, such behavior may well get a person mugged or worse; at best, it would be ignored.

The same is true here. The equivalent of a mugging is a flaming. Granted, it's a couple of orders of magnitude different, but so is the amount of risk you take in "coming" here versus going to a bus station.

The bottom line? You can't change it, and you won't. If you don't like it, and you absolutely can't ignore the seediness, then you'll have to forego the service the group also provides. That's a matter-of-fact as it gets.

Me? I like it here. I get good information, and sometimes I'm able to provide something, something hopefully useful, to someone else. The off-topic stuff is usually good entertainment when you accept it as part of the ambience. I realize that by writing this I'm interacting with and becoming part of the sideshow. But I have to do something while I wait for my bus ...

Thank you for the referral. But I must correct the domain
name as it ends in '.net'

And your comments are right on about being relative. I
consider the MVT-9000 to be much easier to use and on that
basis alone, will appeal to many people. The AR8200 is
more complex, and comes much closer to the 9000 in many
more respects than the AR8000 ever could, but there are
some who appreciate the added flexibility at this cost.

I would hold off a while and see if AOR does any tweaking
for the US version which probably won't hit our shores
for another 4 - 6 weeks.

I am interested in communicating with anyone that lives in
or can monitor Arizona radio traffic and that has an
interest in the Scan*Star or CE-232 formats for frequency
programming or scanner control. Do you want a good Pima
county list that is comma delimited?

Respond via email to kf4ndq@qsl.net

In article <6o98h8$h6r$1@nnrp1.dejanews.com>, jging@my-dejanews.com
writes

Hi,

>Doe's any body know how to disable the keyboard beep on the 2042??
>Please let me know. Thanks jging@execpc.com

Going from memory......

Remove the top cover and locate the connector block labled "CN3". This
is located near the font of the main RF Board.

Pin 1 should have a brown lead that originates from the logic board and
this is the "beep" line.

Don't cut it but remove the brown lead from its location in the block.
You will probably find it easier to remove the complete connector first.
Once removed just plug the connector back minus the brown lead...no more
"beep". To get it back just put the brown lead back.

All the best
Cheers,

Hello David

i have been using the RS Discone Antenna for eight years now and I'd say it would do just the job for you and once it on the roof, you should never hacve to maintain it! It's coverage is:

(50/144/220/440/900/1296)

and here in Canada it is a good price of $79.99 seeing when I bought mine it was $99.95.

John (73s)

Hi Russell!

If he just wants to be restricted to his town or city for the Truck
thats fine, but lets say he want to hear whats going on in the niegbouring
cities he should have a outside antenna. I live 35 miles east of Toronto
and I list to not just are own Truck stuff but stuff from west of Toronto
and south into northern New York State. It's great! I suggested the
Discone because it has been a maintainence free antenna. I would hate more
then after a hard winter then finding peaces of my antenna all over the
ground. Plus for 800Mhz it's been great!

John

Need recommandations or ideas on how to filter out automotive electrical noise...
what works best. I can put the scanner on it's own circuit with a filter.

I do usually feed both the scanner and CB with their seperate external antennas.

I've seen several different types of filters marketed... which works best.

>the butterfly UHF antenna that came with the set does a better job.

The primary problem is not one of gain - it is a matter of
polarization. Discones are vertically polarized as are communications
antennas in general. TV signals are horizontally polarized.
Cross-polarized transmit and receive antennas can result in about 20
dB in loss compared to correctly polarized antennas.

>never touched the LDA commands that Icom's software uses at startup. I
think
>that is the achilles heel of the protocol.

I have yet to attempt ANY of my own programing. Yet my radio HAS
experienced the infamous EEPROM corruption (verified and fixed by Icom
thankfully). I got my radio in January and used only Icom's software for a
short time. Frustrated with its shortcomings, I downloaded two of the most
popular packages (based on the times they get mentioned on this forum - one
commercial and one shareware) off the net and used both. As I've said
before, I have NO WAY to know what actually corrupted the EEPROM. Didn't
realize the scope of what had happened until days or weeks after the
symptoms first appeared. It is possible that it happened purely for
electrical reasons - although my computer and the Icom power brick are both
protected by a high quality 800 watt UPS system. The fact that I had used
third party software led Icom to lay the blame on that for the corruption.
I have no way to know for certain. I don't wish to identify those third
party packages as that seems patently unfair - they would suffer bad
publicity which is unjustifiable since Icom's policies are really at the
root of the problem, REGARDLESS of whether it is a software or a hardware
issue with the radio.

>Stay clear of the LDA commands and binary commands. I have yet to try the
>binary modes for signal updates. If the binary mode is what I think it is,
>it is directly setting the registers of the controller/cpu like the old
>Hayes modems did. I think that is where the risk comes in since a poorly
>built bit mask could cause extreme changes in operation of the receiver.

The other weakness in Icom's computer control scheme is that there is NO
DATA VALIDATION scheme invoked between the computer and the radio. Not even
RS232 hardware handshake, XON/XOFF protocols, or even any check digit
scheme. It just interprets whatever it "sees" coming across the wire.
Well, since the radio and the computer likely 'power up' at differing baud
rates, and even the Icom software negotiates from 9600 baud to 38,400 baud
dynamically when invoked, it is HIGHLY LIKELY that a lot of garbage reaches
the radio and gets interpretted wrong. Think about the number of times you
reboot the computer without powering off the radio first. When Windows is
rebooted it sends automatic queries to all available comm ports to check for
new Plug 'n Play hardware. I have no idea what actual commands it sends nor
what actual baud rate it might use. But if the radio is powered up, it will
indeed receive these commands and dutifully attempt to perform whatever it

is "asked" to do by these non-Icom commands. Since these commands are not necessarily at the correct baud rate, who knows what the radio actually interprets these instructions to be? This is a fatal flaw in the design of the radio itself - and I think Icom owes it to the owners to provide a straight forward way to protect the vital EEPROM data. This really isn't much to ask - and is a separate issue from their refusal to document the command protocols.

Be thankful you haven't experienced the EEPROM corruption. If the experiences of those of us on the pcr-1000@qty.net mail list are typical, it would appear that a significant number of users will experience this problem sooner or later. So far, 5 users on that list have experienced the same corruption. Poor Miquel in Spain has had it happend 3 times - possibly exascerbated by his admitted attempts to write his own radio control program. So is the problem software related? Miquel's experience with multiple failures seems to point to that. Icom's statement that "future EEPROM corruptions will be treated as user hardware modifications" surely indicates that Icom themselves THINK the problem is software related. I really can't say.

It does however diminish the appeal of this radio for my needs. Its frustrating because other than Icom's refusal to deal with the problem, I like the radio. And I'm not as critical of their software as some have been - I just considered it a "throw away" item anyway until all this crap surfaced about using third party software. Icom basically wants us to use ONLY there software - and BE HAPPY with it! Someone out here said that Icom doesn't know their customer base very well. That's becoming more clear as this thing drags on and on and on and on....

Good luck with your programming efforts. And when you do discover that your AFC doesn't work anymore or that your receive sensitify on your bandscope has diminished to about 30% of full scale, just be sure NOT to mention to Icom that you've done anything but run their software. Its a damn shame their policies have led to this confrontational attitude, but I would councel anyone with similar problems to avoid giving Icom any excuse to void their warranty.

John

Aw John,......C'mon now. Everyone knows you're the designated NG pest.
Check your wallet. You should have your official NG Pest Permit card.
The permit conditions are on the back. That means you have to turn it
over John. No,.... not upside down; turn it over....the *other*
way...no..you..GIMME THAT! Jesus. Ok, right here, take a look:

1. The pest permitee must possess no more than a 3rd grade writing
level.

2. The pest permittee must maintain a constant supply of off-topic
drivel equivalent to 30% of the NG traffic.

3. The pest permittee must take reasonable measures to assure that all
his posts steer clear of quality, truth, and common sense.

4. Failure to adhere to these conditions may result in administrative
action and possible redesignation as member of the human species.

you friggin' loon.

What is making the noise? Could it be that you just need new spark plugs? Is the alternator the culprit? You should find out what is causing it first, then you can figure out how to fix it.

1509. Skytel Complaint Letter...

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: dpinero@pobox.com
Message-ID: <35aaed54.3943473@news.mindspring.com>
Source record: 153005

Well maybe I'm not going to receive an award for tact, but here's a letter I just sent to SKYTEL regarding it's paging service. I post it because I'm not sure anyone will read it, so that you will know about this limitation of the SKYTEL paging system, so that it will be stored in DejaNews for others with similar problems to find and retrieve, and also so that I can be corrected or provided a workaround solution to the problem mentioned. Here it is...

TO SKYTEL:

Hi there -- I just subscribed to SKYTEL National Numeric paging (not alphanumeric) as part of my Beepwear watch deal. Unfortunately I found out after paying a year in advance for your service, that you do not allow the sending of dashes (typically by sending an asterisk "*" with most other paging services). It never dawned on me that a paging company would not allow this. It's not really that you shut it off, but that the asterisk triggers the menu prompt so that a dash cannot be sent. On my Beepwear watch, the display sort of "assumes" where they are.

Anyway, the point is that a LOT of people depend on dashes to send specialized codes to their numeric pager. In my case, I have an email paging program that is defaulted to send an asterisk that it cannot with your service because of the triggered menu system. The same is true for all kinds of automated signaling and security equipment. You MUST enable the ability to send a dash as much as you must include the ability to send a numeral. I'm half-laughing that this is implemented as it is!

I called your customer service department to report this glaring oversight, but your rep said that this would not be changed. I thought this was neat, by the way, that you empower answering clerks to make corporate decisions like that! She did suggest I call a supervisor about it which I will; but given this clerk did not appreciate the importance of it, I doubt a recently promoted customer service clerk will either. I need to speak to someone with influence over your technical standards and with understanding of what I'm talking about. At least forward this message to said person.

Your clerk advised me that I was the only person to call about this which is erroneous. First, she probably has no real way of knowing whether I'm the first person or not unless she has access to the thousands and thousands of calls that come in each day...and in the second place, that would figure. I frequently bring important problems to the attention of companies before I do what millions of others do when confronted with an issue, which is switch companies on

the spot.

Please let me know what's up....I really need this feature.

I'm sending a copy of this letter out on several Usenet groups because I think it's important that thousands of potential customers know what to expect, and also I'm not sure this letter will really be read by anyone. Plus I need to know if this is an isolated problem or what the heck...I will happily post any response you send me as well...

Thanks,
Dave

1515. Re: Up to His Old Tricks

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: k4cc@aol.com
Message-ID: <19980712173420000.NAA24249@ladder03.news.aol.com>
Source record: 153011

Well known scanner expert and humanitarian experimenter, jOhn mackey, " KAOSSF <kaOssf@parg.org>" wrOte:

>Back on July 5, we read this from Cheek speaking to me!!

And you were just so THRILLED that he was speaking to you that you just couldn't STAND it when he stopped for a few days, could you?

If you're through crying and slinging snot all over the newsgroup, let's take a look at what Bill ACTUALLY said, not what you THINK he said or WISH he said or had a DREAM that he said. Here's what he said:

>You're going back on my Twit List to stay for an indeterminate period of time

Now, I realize that INDETERMINATE is too large a word for you to understand, John, but what it means is that it could be for 10 seconds or 10 years ... a period of time the length of which has not been determined.

Bill also wrote:

>Yup, it's a one-way contract...you are free
>to continue your attacks, flames, and nasty
>posts. There is no deal that binds you.

In fact, you did continue your attacks, flames, and nasty posts, plus your silly attempts at being the rootin' tootin' sheriff of the newsgroup.

Bill also wrote:

>However.....IF you opt to honor a reciprocal
>contract, you may rest assured that for as long
>as you maintain your side, mine will remain in
>force, too.

Since you never had any intention of, or even came close to, honoring a reciprocal contract, Bill had no reason to invoke this paragraph.
In short, cheetah, the only person Bill made a deal with is Bill. How long he chooses to honor it is his business.

You friggin' loon.

>
> hey cheeck
> your one funny guy
> your wit

The *real* bill conduit (BAYCITVIDGRP) checked out of here a while ago.
And on a fairly decent post as I recall. So he's not here to defend
himself. So who do you think's been trottin' through the graveyard
looking for carcasses to prop up as his virtual support group?

So the Phetid Phairy Forger is out in the graveyard diggin around:

"Yeeaaah, here's a good one. Still fairly recognizable.
I mean he's gone....he can't talk or 'nuthin, but I can
still use him to be on *MY* side!" All I gotta do is
drag 'em home and stuff him in the crawlspace.
I gotta do a little work on him."

And work on him you did: Ya got his handle on, forced the carcass to
sit up straight and worked the jaws to make it look like your spew was
coming from him:

. hey check
you one funny guy
your logic
so easily it does fly

hey cheeck
your one funny guy
your wit
so on top, so sly

hey check
you one funny fellah
like one female topless
and only one aerolah

Although bill conduit's (BAYCITVIDGRP) stuff frequently looked like poetry, it rarely rhymed. In fact, most poetry doesn't rhyme.

Oooopsies. Well I guess it's "back to the crawlspace" for you and that carcass, ya little sicko. Better fix it up quick: Those things tend to stink after a while.

eeuuuuuuwwwwwww.

1517. Wanted: Yaesu FT-50r ht and or computer interface kit

I am already on my second scanner. I can't remember what model it was, but it was a RS Pro ??, 10 chs, blue buttons to push for the numbers and all etc. Now I have a RS Pro-50, and I would like to get a scanner that has the ability to pick up 800 and 900 MHz, preferably around $75-100 used. If anyone can point me into the right direction, please E-Mail me.

Thanks,
Ari

>Are there any plans in the near future?

Steve -

If a digital system carried only the digital conversion of voice signals it would be possible for scanner manufacturers to build digital scanners. We are part way there with trunktrackers which use the digital information on the data channel to let the scanner track converstions and lock out groups (such as school bus drivers) that we don't want to listen to. Unfortunately in a digital system data can be encrypted and that presents problems of an entirely different magnitude. Breaking an encrypted communication requires much more computing horsepower than a scanner can pack.

I've wondered about that, haven't seen anything in any of the
journals. If the data stream is encrypted it wouldn't do any good.

Durham Region Radio Group (formerly Durham Region Scanner Group) has a new look and new location..

http://www3.sympatico.ca/david.bate/drrg

From Toronto to Hastings County, Erie and Monroe Counties NY scanner info available. That is not all, short-wave, military, satellites, OPP, maritime, weather, aeronautical, plus more will be added. A supplement site to the already popular OntScan's Emergency Communications site. A group that started about four years ago at the SpaceLodge BBS, has continued into the Information Highway.

New updated Durham Regional Police Services, UTE/HF frequency listing and the satellite hot-listing.

1548. aircraft comms

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: Kees Leune <C.J.Leune@nospam.kub.nl>
Message-ID: <6ob7keccv1@mailnews.kub.nl>
Source record: 153044

I am one of those people that is very interested in radio communication procedures. I am looking for an online reference of radio frequencies that are used by air traffic control centers (both civilian and military), but I have been unsuccessful so far.

If there are any such lists or databases, I would like to know very much, but my hopes are not very high.

Since I cannot imagine that I am the only one that is interested in aviation radio communciation, I am willing to set up an online database containing frequencies. However, there are a number of problems that I have to solve before I can do that.

1) First of all, I need data. I do not think that this will be a very large problem if a number of people participates by providing me with information.

2) Second, if I do create an online repository for this kind of things, I would like to do it right. Professionaly, I know about databases and I have databases available that can do the trick. What I need is domain knowledge about air traffic procedures.

I want to be able to classify frequencies. I just do not know enough about the subject to be able to do it right. As far as I understand, the entire world is divided into Flight Information Regions. Can these FIRs be uniquely identified? If so, how are they ordered?

Since one FIR is quite large, they are divided into smaller areas. As far as I understand, these areas are defined based on proximity to airfields and altitudes. Can these partial FIRs (do they have a name?) be classified and identified?

For example: Amsterdam radar operator on VHF frequency 123.850. How do I classify the area where pilots contact Amsterdam Radar?

3) As far as control area's around airfields, I think I have a fairly good idea. Could a setup like this work, or am I forgetting details?

Each airfield has a number of associated channels. For example Approach, Arrival, Departure, Tower, but also information channels like ATIS or Meteo broadcasts. Call this the 'type of frequency'.

Each of these frequencies also has a status. It's primary, secondary or even of lower status.

So, 121.200 could be described by the following record

frequency: 121.200
airfield : Amsterdam Schiphol (unique identifiers avaiable?)
type : APP
status : PRI

4) Information in a repository like this needs to be up-to-date. Does this kind of information change often? I need to set up some kind of update/ modification/authorization procedure to keep the information as recent as possible.

Once I have a clear picture of what I want to created, the resulting framework should be available fairly quick.

Who can provide me with the right information? I am prepared to invest quite some time into the problem.

Thanks in advance,
Kees (pa3hfb)

>comes with TWO for about the same money.

I nearly always see this comment about the prices. But in fact, since RS seems to have the PRO-90 on sale most of the time, the prices are about the same, too. Right now, a PRO-90 is $200. If you order the charging cradle from Uniden, it's about $25 and includes an extra battery. So ... prices are about equal, and you get your radio today instead of later in the week.

1558. BC235 Attenuator function

Newsgroup: rec.radio.scanner
Date: 1998-07-12 00:00:00 UTC
From: Mike Fairleigh <mikef@sky.net>
Message-ID: <wraq1.38$Gk2.771404@alpha.sky.net>
Source record: 153054
Cross-posted to: rec.radio.scanner,alt.radio.scanner

For what it's worth, or for anyone who cares, it appears that the attenuator function was added somewhere between serial numbers 75021710 (belonging to kbowman@erols.com) and 75027749 (belonging to mmwr@email.msn.com) -- the former not having it, and the latter having it. Congrats to Andy for apparently having the first 235 in the newsgroups to have the feature.

Thanks to all who responded with their serial numbers!

RE: I had a 20db preamp signal booster on my Yaesu scanner. It also had a built in
antenna tuner. It worked well for me especially in the 48-50MHZ range and in the
worldwide shortwave bands as well. In many cases it would pull in an otherwise
inaudable signal to readable levels above the noise level,and it would bring in
noisy signals to clear ones. Get one that is compatable with the freq's you are
monitoring and one that has clean amplification to reduce any unwanted noise to
the signal. I would recommend getting a GOOD one, they do make a noticeable difference.

clarencegreen@my-dejanews.com wrote:

> hi bill cheeks,

Yes, Clarabelle GreenCheese, now take a
look at the second photo of my Moonraker 6
atop the hundred-ft tower. MR2.GIF is
attached for your fault-finding and claims
of how you've done better.......

However, you should glean some idea that
your cute little slur story is just not in
my character at all. You really need to
concoct something a little better and more
believable.

You say you know me from Colorado? If so,
then you will know that I set up that same
Moonraker 6, except on a measly 40-ft
tower, due to the neighbor's worries......
but even with that chintzy setup, I talked
groundwave well into Wyoming to the north;
easy into Nebraska to the Northeast; and
even out to Western Kansas to the East.

The mountains to the south of my location in
Golden, Colorado, kept me from hitting much
farther south than Colorado Springs, but
still, that was pretty good.

Enough for now. Just feast your eyeballs
on the attached photos for a darned nice
success story. Eat your heart out. :-)

Later, I will tell you about more success
stories and even an abysmal failure or two.
But there is nothing of the sort of goofy
story that you tried to concoct.

But if you still think there is....then PLEASE
feel invited and ENCOURAGED to produce details,

supporting evidence, and corroboration....as
I have taken the time and trouble to do here.

Fair enough, GreenCheese?

Touche!

Probably the best (and easiest) way would be to put up an outdoor antenna
and connect it to the built-in whip. You *might* be able to
cross-reference the output transistor and replace it with a beefier one,
but it's most likely not worth it.

Bear in mind, however, that as you increase the basic range you run the
risk of being heard by many more people in the neighborhood!

Some assembly required.
Batteries not included.
Void where prohibited.

US military surplus back from Europe. I have five MX330-340 length radios that are currently on 70-85 mhz freqs. Physical condition is pretty good, units need going through to reseat modules, reset VCOs etc.

All five for $150

Manual photocopy included.

Please e-mail me at: spencer12345@msn.com

Thanks!

The charging curve for NiMH is a bit different than NICADS. However, many
of the NICAD chargers seem to work well with the NiMH batteries. The
damage, if any, will happen with time.

You make an excellent point, Bill, and I couldn't agree more. It's only a hobby, folks, not some sacred trust or gathering of geniuses. If you want a license that will get you somewhere professionally, get a professional license. If you want to have a little pleasant distraction on the weekends, get a ham license. I was 14 when I got my first commercial license (then-3rd Class radiotelephone), 17 when I finally licked 1st Class (now GROL). I was 36, and had been working for 21 years, when I got my ham license.

I have two Radio Shack PRO-2046 scanners for sale. Both have always been operated inside - never mobile. Both in excellent condition. This is the same scanner that is currently in the July Radio Shack Flyer (page 10) regularly $229.99 on clearance for $149.99.

I am asking $90 for each and I'll pay shipping to lower 48.

Thanks
Kevin (N9RTF)

How sad that you were treated the way you were. There are only
a few "bad apples" on this NG, but they are spoiling it for all! :(

I suspect by now you are beginning to see who the guilty parties
are in the problems here, & who the ring leader is. He CLAIMED
he was starting a killfile & was backing off causing the problems
here, but after only a few days he appears to be starting again.

Hang in there, eventually we WILL have this person dealt with
appropriately. I might suggest you write to his ISP about his
behavior at abuse@cts.com & abuse@san.rr.com.

best wishes!

clarencegreen@my-dejanews.com wrote:

> hi bill cheeks,

Hi again, Clarabelle GreenCheese:

Say, ol' chop....you've gotten me to thinking.

So, I'm going to tell you a few antenna stories
in a series of posts that I'll be making over the
next few days. I'll tell you about the one or two
failures of my time, but first I'm going to tell
you about a success story.

This will put things into perspective for you,
my dear GreenCheese.

Let's see.....it was in 1976, well before the
time you claim "I blew up" an antenna. I was
living in Southwest Missouri where CB radio was
popular and talking long-distance groundwave was
the "in thing". So I designed an antenna system
to talk groundwave.

It consisted of an Avanti Moonraker 6 dual polarity
6-element directional beam, rated at 17-dBi gain.
Its dimensions were 32-ft long; 18-ft high; and 18-ft wide.
The rear element was a quad reflector while the driven
and four director elements were in crossed yagi formation.

Get the picture so far?

Well, I put it on a 1-man lay-over tower at 100-ft.
The GIF file attachment (MR1.GIF)to this post shows
a view of the tower and antenna from down by the
highway that passed by my property. See for yourself.

The next post shows another view of it with an
annotation of how the thing went up and down. And,
like I said, it was a 1-man job. "Antenna party"
not needed. Oh, sure, I rarely cranked it up and
down by myself because the slightest side breeze

could torque it off the base, so most of the time,
one of my sons held the up-wind guy wires loosely
to keep any side sway from happening.

But on still days, I did do it by myself.......

It was IMPRESSIVE. So impressive that on days when
I raised and lowered it for maintenance, traffic
out on the highway would pull over to the side of
the highway to watch. It even made the TV news
broadcasts a time or two.

That antenna and tower worked flawlessly for the
three years I lived there, until I moved and took
it with me to the High Country of Colorado.

Now, Mister GreenCheese, you take a look at the
photo attached to this post and the one attached
to the next post, and you will readily discern
that I know a little something about the mechanics
and electronics of antennas.

Enough to blow your goofy story to hell and gone.
I wouldn't.....and couldn't....make a mistake
of the kind you're trying to slur me with.

Ohhhhh, I made a few errors in my time, and I will
tell you about them in succeeding posts over the
next few days. Chances are real good that I have
made more antenna errors than any two of your kind
out there.

But, dude, you're now fixing to see a success story
that is unmatched by one in ten-thousand or more.

Go ahead, GreenCheese, take a gander at the attached
GIF photo. Fault it....if you want. Like in the
game of poker where the cards speak for themselves,
so do my antennas.............

<evil grin>

clarencegreen@my-dejanews.com wrote:

> hi bill cheeks,

Yes, Clarabelle GreenCheese, now take a
look at the second photo of my Moonraker 6
atop the hundred-ft tower. MR2.GIF is
attached for your fault-finding and claims
of how you've done better.......

However, you should glean some idea that
your cute little slur story is just not in
my character at all. You really need to
concoct something a little better and more
believable.

You say you know me from Colorado? If so,
then you will know that I set up that same
Moonraker 6, except on a measly 40-ft
tower, due to the neighbor's worries......
but even with that chintzy setup, I talked
groundwave well into Wyoming to the north;
easy into Nebraska to the Northeast; and
even out to Western Kansas to the East.

The mountains to the south of my location in
Golden, Colorado, kept me from hitting much
farther south than Colorado Springs, but
still, that was pretty good.

Enough for now. Just feast your eyeballs
on the attached photos for a darned nice
success story. Eat your heart out. :-)

Later, I will tell you about more success
stories and even an abysmal failure or two.
But there is nothing of the sort of goofy
story that you tried to concoct.

But if you still think there is....then PLEASE
feel invited and ENCOURAGED to produce details,

supporting evidence, and corroboration....as
I have taken the time and trouble to do here.

Fair enough, GreenCheese?

Touche!

Enough already.

I've been watching Mr. Cheek since back in FIDO NET days. In all that time, I don't recall ever using a gratuitous insult, excess profanity, obscenity, or other such tactics. I've never used homophobic references to him, or done sophomoric takeoffs on his name. I've tried to keep my posts factual and to the point. I've tried to document everything I've said if possible.

In return, in addition to what you've all been able to see here in a public forum, I've been subjected to harassing, vitriolic e-mail. I've been mailbombed, had forged messages posted in my name, and have been threatened with various and sundry nastiness, culminating in a recent death threat.

Well, I may be a bit slow, but I do have a few remaining functioning brain cells, which are telling me that my job is done here, and that I'm only wasting my time with any further tilting at this particular windmill. Mr. Cheek will no doubt bluster about how he's won the battle and has chased me away. Fine. Let him rant, if that makes him feel better. It all pays the same, as they used to say in the Real World.

Goodbye, Mr. Cheek. It's been educational for me and, I suspect, more than a few of the readers.

> > Beware of a possible massive Mack Attack

How nice to see you, dipstick. I've been
missing you. So I opened up this thread to
let you in. I KNEW you'd enter, spitting
and spewing. heh heh heh

But I am going to twit you back out come
Monday or so. I just had to warn everyone of
a possible pending Mack Attack over the weekend.
It was my civic duty.

> Bill, why are you trying to cause trouble again,

I'm not. You did. First off, you shot off your
mouth about me all week, even after I had slapped
you back on my Shit List....you just COULDN'T
give it a rest. And then you just HAD to go
do some more forging and rogue canceling. Except
this time, you got caught with your shorts down.

YOU caused trouble, wingnut. Not me. I just
frapped you upside the jowls for it so that
your lips went, "blippety...blippety....blip...blip".
That's not causing trouble. It's responding to it.

> most of your litle loser buddies were shutting up

I don't have any "little loser buddies", Hermie.
Just great big WINNER pals. The kind that make
you look like a rascal. Do you know what a "rascal"
is? A "rascal" is a gooooooodbuddy with chapped lips.
You rascal you........ Now go put on some ChapStick.
....or lipstick.

> & the NG was getting to be a nice place again?

Not with you flatulating and puking all over
it all week. Take a poll, Hermie. See what
others think.

> Or IS THAT why you are trying to stir up trouble again?

I'm not trying to stir up trouble, peanut. You stirred
it up and got caught taking a poop in the flower bed.

You should be ashamed of your low-lifed self.

Say, tell "Clarence GreenWeeny" hi for me. And
tell 'im to take a look at the antenna pics I
posted. You can look at 'em, too, if you want.

And then tell the world I don't know anything
about towers and antennas. Ha ha ha ha ha ha.....

You friggin weeny........

> (Incase you forgot, I have the deal below that YOU posted!)

BE sure to include the part where I said
I'd change my mind when I felt like it.
And you flapping your lips about me all
week helped change my mind. The clincher
was when you went back to forging and
rogue canceling. I had to do my civic
duty and warn the newsgroup of a pending
Mack Attack.

> Sounds like you definately ARE up to
> your old tricks again.

What, frapping you upside the jowls so that
your lips go "blippety....blippety...blip...blip"?

No, Hermie, that's RESPONDING, not initiating.
To make the deal I presented last for eternity
all you gotta do is AGREE to it, too, and abide
it for as long as I do.

Then, I will outlast you. And your chapped lips
will have a chance to heal.

You friggin fruitcake........

From: anyplace@nowhere.mil
Date: 1996/09/19
Newsgroups: rec.radio.scanner,alt.radio.scanner

<SNIP>

Shut up yourself, FOOL. I was not the one discussing X-301, I was
taking Bill to task for suggesting poeple use a metalic screwdriver to adjust
an RF circuit. If you have ANY technical knowledge at all, you know
that is a BIG problem.

It sounds like you are the one who shouldn't get involved because
you don't know what the fuck you are talking about.

(end of original post by the esteemed Mr. MackOy)

So, John, I suppose the example you set with that post is how we should treat people who post here?

>Hang in there, eventually we WILL have this person dealt with
>appropriately. I might suggest you write to his ISP about his behavior

And I would suggest to you, sonny boy, that you move out of that glass house before you throw any more stones.

Hello!
I have Yupiteru MVT-7000(mint condition).
It is japanese popular handy type scanner.

** It is full coverage 100Khz-1300MHz **

For sale US$190+shipping
or trade for your radio.

I wait your information.

Specifications of MVT-7000
Frequency Coverage:8 - 1300 Mhz (100Khz - 8Mhz at reduced
sencitivity)
Output:Audio 130mW into 8 ohms
Modes:AM,FM,WFM
Memorys: 200
Dimensions:64.4(w) x 160(h) x 41(d) mm

Features

Super Wideband coverage
Memory Search and Priority Scan facilities
Extended receive
Large LCD backlight for easy viewing of all functions
Rotary tuning knob
Signal stength meter
Channel pass function
Attenuator

JA_model...ac adapter (ac100V),Manual(Japanese)
If you need, you can get it.

```
COLOR DOT FREQUENCIES
=====================

151.6250 Red Dot
151.9550 Purple Dot
154.5700 Blue Dot
154.6000 Green Dot
167.7300 Black Dot
462.5750 White Dot
462.6250 Black Dot
462.6750 Orange Dot
464.5000 Brown Dot
464.5500 Yellow Dot
467.7625 J Dot
467.8125 K Dot
467.8500 Silver Star
467.8750 Gold Star
467.9000 Red Star
467.9250 Blue Star

* The Red+Purple, and Blue+Green channels are sometimes paired. Even more
commonly, these pairs are found together in 2-channel VHF business
handhelds.

COLOR DOT FREQUENCIES
=====================

This is an updated list of IB (business) frequencies which
are usually reserved for low-power handie-talkie use, and are
informally identified by a "color dot" marking system. These
freqs are the ones normally in "off the shelf" HT's, such as
those found in business supply and rental stores. The color
dots are designed to aid buyers wishing to add radios
compatible with previous purchases.

151.625 - Red (sometimes paired with Purple)
151.955 - Purple
154.570 - Blue (sometimes paired with Green)
154.600 - Green

462.575 - White
462.625 - Black
462.675 - Orange
464.500 - Brown
464.550 - Yellow
```

"Star" instead of dot:

467.850 - Silver Star
467.875 - Gold Star
467.900 - Red Star
467.925 - Blue Star

Most of these frequencies are designated for limited power only; "red" and "purple" are notable exceptions. Several of the frequencies are formally "itinerant", i.e., reserved for temporary or infrequent use.

The identifying dot or star is usually found on the bottom of the HT. This is not to be confused with a big yellow stripe around the middle, which is the "trademark" of the JobCom brand of HT's. Rental houses may paint a bigger dot on the case for quicker ID, but this isn't reliable - they may choose their own color system.

Many thanks to Bob Burns and everybody in the forum who helped with the compilation of this data.

I. What is the GMRS ?

The General Mobile Radio Service (GMRS) is part of the Personal Radio Service, and falls under part 95 of the FCC regulations (subpart A). The Personal Radio Service is intended to give the general public access to portions of the spectrum for various uses. Citizens Band (27 MHz) and model radio control (RC) are also part of the PRS. Unlike other land mobile services, the GMRS is available only to individuals. There are few restrictions on what the GMRS can be used for.

Consisting of eight channel pairs in the middle of the UHF land mobile radio band (450 to 470 MHz), the GMRS resides in what is most likely the most expensive real estate in the world.

II. A brief history.

The GMRS used to be known as the Class A Citizens Band. For a long time the high cost and scarcity of UHF radio equipment kept the GMRS beyond the reach of most individuals. Since few individuals were actually using the GMRS, the FCC allowed commercial users on the band.

Over the years a few radio products targeted at individual GMRS users appeared, but none were a big success.

Things have changed dramatically. Several generations of solid state UHF equipment have now come and gone, and reliable commercial gear is both affordable and practical. As businesses and government agencies migrate towards the 800 MHz band, well maintained used gear is available at most radio dealers and flea markets.

Recognizing the rapid growth in individual use, the FCC stopped licensing commercial users on GMRS channels in 1978. Businesses licensed in the GMRS before 1978 can continue to renew their licenses, but no expansion, modifications or license changes are permitted. Since 1978, commercial use of the GMRS has declined as individual use has steadily increased.

III. Who can use it ?

GMRS licenses are only granted to individuals 18 years of age or older. Partnerships, corporations, associations or other non-individuals are not eligible.
A great feature of the GMRS is that members of the licensees

immediate family living in the same household are covered by the same license. There is no minimum age requirement for using GMRS. This is Family Radio!
There are few restrictions on what you can use GMRS for. Licensees (and their family) may use GMRS for any legal purpose, business or personal, except broadcasting.
It's important to note that businesses licensed in the GMRS before 1978 may continue to use it pursuant only to their originally licensed activity, and only employees of the business may operate their radios. Since only family members are allowed to use post-1978 licenses, new commercial use of the GMRS is effectively blocked. (A possible exception is the small business where all employees are family members.)

IV. Technical Details.

In general, the GMRS is operated and managed like the other land mobile services. GMRS license applications are submitted on FCC form 574, the same form used by part 90 (business and public safety) applicants.
Technical standards for equipment are essentially the same as well, the major exception being a 50 watt maximum power limitation in the GMRS.
There are eight primary frequency pairs allocated to the GMRS:

462.550 467.550 MHz
462.575 467.575
462.600 467.600
462.625 467.625
462.650 467.650
462.675 467.675
462.700 467.700
462.725 467.725

The higher frequency is used for repeater inputs.
As the rules now read, a GMRS license is granted for only one or two of these primary pairs. Additional pairs could be obtained by licensing different adult family members on different pairs.
The 462.675 channel pair has a special attribute: it may be used by any GMRS licensee for emergencies, civil defense or receiving or rendering travelers aid. You don't need to be licensed specifically on '675 to take advantage of this. This feature was implemented by the FCC to accommodate groups such as REACT (remember those guys who used to be on CB channel 9?). The 462.675 channel is monitored just about everywhere in the U.S., and national directories are available listing groups providing services to travelers. In northern California, REACT repeaters can be found on Mt. San Bruno, Monument Peak and Sacramento.
In addition to the one or two main channels you may be licensed for, family GMRS licensees may use any of the following seven split channels in simplex mode with 5 watts maximum power:

462.5625 MHz
462.5875
462.6125
462.6375
462.6625
462.6875
462.7125

V. How easy is it to get a license ?

Fill out FCC form 574, send them $35.00 and wait 30 to 45 days. There are no tests, and no expensive frequency coordination or engineering studies are required either. Temporary operation while your application is pending is possible, see part 95 for details.

VI. What equipment can be used ?

FCC rules require that transmitters must be type accepted for use in the GMRS. Almost all type accepted commercial UHF (450 to 470 MHz) radio equipment is also type accepted for GMRS.
It is definitely NOT legal to use outbanded ham gear in the GMRS. Beside the legal issue, most 440 ham gear performs poorly above 450 MHz, and shouldn't be considered.
The rules state that the licensee is responsible for maintaining his GMRS own equipment. But like the other land mobile services, an FCC license is not required to make transmitter adjustments. If you have the equipment and background, you can maintain your own equipment.
GMRS rules require that all transmitting equipment be type accepted (and unmodified). Other station equipment such as receivers, repeater controllers and accessories must meet the technical standards of part 95, but need not be FCC type accepted. This gives the licensee considerable flexibility when putting a GMRS system together.
There are many sources of good radio gear that can be used on GMRS. New equipment is always nice, but there is so much used equipment available it's hard to pass up - if you're a savvy buyer and technically inclined. The ham radio flea markets are also a good source. Commercial gear has always been popular with hams because of it's reliability and availability of replacement parts. Most radio shops (see the Yellow Pages) take radios in on trade from time to time, and will be happy to set you up with a decent unit and a guarantee.
One issue to watch is whether radios are crystal controlled or synthesized. Synthesized units are more expensive, but can be programmed by a radio dealer to operate on your channel(s). Dealers will usually program a radio for free when you buy it, or change a nominal fee (typically $25) if you bring one in. On the other hand, crystal controlled radios require a pair of crystals for each channel. Crystals cost between $15 and $30 a pair, usually require two or three weeks for delivery, and need to be

fine tuned with a frequency counter when installed. Radio dealers have been known to charge $100 a channel for crystal installation. Unless you have the test equipment, experience and patience for crystals, the lower cost of these units may not be worth it. Another thing to look out for is how many channels a radio has. Since you can legally operate on up to ten different GMRS channels under a single license, you might want to look at radios with at least four to six channel capability.

VII. Who is using GMRS ?

Punch up any GMRS channel on your scanner and you'll hear lots of activity. During the day, expect to hear some pre-1978 licensees such as delivery trucks, security companies, etc. During the commute hours, you'll hear people calling home to find out what's for dinner, coordinating trips to the grocery store or chatting about how their day went. The '675 channel is especially busy during rush our in any of the major metropolitan areas.

VIII. Repeaters on GMRS.

Although all of the typical configurations are permissible in the GMRS (base stations, mobiles, control stations, fixed stations, pagers, etc), most GMRS users license themselves as mobile units and share a repeater. High altitude GMRS repeaters exist just about everywhere other transmitters are located. These sites provide excellent coverage over very large geographic areas.
FCC rules permit repeater owners to allow other licensees to use their facilities on a non-profit, cost-shared or reciprocal basis. You should be able to find a repeater with reasonable coverage for much less than $20.00 per month, in some cases as little as $5.00 per radio per month.
It should be noted that all GMRS repeaters use subaudible tones (PL) to control access. Digital Private Line (DPL) is in use on some repeaters in the Bay Area.

IX. Paging and Interconnect.

Voice paging is permissible in the GMRS (tone only or digital is not). Interconnection of GMRS transmitters to the Public Switched Telephone Network is not permitted. This means you can't use GMRS like a cellular phone.

Police Radio Codes

The following is a combined list of those radio codes used by the majority of the police departments in the San Francisco Bay area. Each agency also has codes that are unique to that agency's particular task.

In addition to these codes, there are the California Penal Code sections used by police officers and dispatch. For example, a "415 - Family" refers to a family disturbance. Section 415 of the California Penal Code is entitled "Fighting, noise, offensive words" and is commonly termed as `disturbing the peace.' A list of the most often used California Penal Code sections is found at the end of this document.

10-00 Codes

10-0 Exercise great caution.
10-1 Reception is poor.
10-2 Reception is good.
10-3 Stop transmitting.
10-4 Message received.
10-5 Relay message.
10-6 Change channel.
10-7 Out of service/unavailable for assignment.
10-7A Out of service at home.
10-7B Out of service - personal.
10-8 In service/available for assignment.
10-9 Repeat last transmission.
10-10 Off duty.
10-10A Off duty at home.
10-11 Identify this frequency.
10-12 Visitors are present (be discrete).
10-13 Advise weather and road conditions.
10-14 Citizen holding suspect.
10-15 Prisoner in custody.
10-16 Pick up prisoner.
10-17 Request for gasoline.
10-18 Equipment exchange.
10-19 Return/returning to the station.
10-20 Location?

10-21 Telephone:_____
10-21A Advise home that I will return at _____.
10-22 Disregard the last assignment.
10-22C Leave area if all secure; no responsible person/owner is enroute.
10-23 Standby.
10-24 Request car-to-car transmission.
10-25 Do you have contact with _____?
10-26 Clear.
10-27 Driver's license check.
10-28 Vehicle registration request.

10-49 Proceed to _____.
10-50 Subject is under the influence of narcotics.
10-51 Subject is drunk.
10-52 Resuscitator is needed.
10-53 Man down.
10-54 Possible dead body.
10-55 This is a coroner's case.
10-56 Suicide.
10-56A Suicide attempt.
10-57 Missing person.
10-59 Security check.
10-60 Lock out.
10-61 Miscellaneous public service.
10-62 Meet a citizen.
10-62A Take a report from a citizen.
10-62B Civil standby.
10-63 Prepare to copy.
10-64 Found property.
10-66 Suspicious person.

10-67 Person calling for help.
10-68 Call for police made via telephone.
10-70 Prowler.
10-71 Shooting.
10-72 Gun involved.
10-73 How do you receive?
10-79 Bomb threat.
10-80 Explosion.
10-86 Any traffic?
10-88 Assume your post.
10-91 Animal.
10-91A Stray.
10-91B Noisy animal.
10-91C Injured animal.
10-91D Dead animal.
10-91E Animal bite.
10-91G Animal pickup.
10-91J Pickup/collect _____.
10-91L Leash law violation.
10-91V Vicious animal.
10-95 Requesting an I.D./Tech unit.
10-97 Arrived at the scene.
10-98 Available for assignment.
10-100 Civil disturbance - Mutual aid standby.
10-101 Civil disturbance - Mutual aid request.

11-00 Codes

11-10 Take a report.
11-24 Abandoned automobile.
11-25 Traffic hazard.
11-26 Abandoned bicycle.
11-27 10-27 with the driver being held.
11-28 10-28 with the driver being held.
11-40 Advise if an ambulance is needed.
11-41 An ambulance is needed.
11-42 No ambulance is needed.
11-48 Furnish transportation.
11-51 Escort.
11-52 Funeral detail.
11-54 Suspicious vehicle.
11-55 Officer is being followed by automobile.
11-56 Officer is being followed by auto containing dangerous persons.
11-57 An unidentified auto appeared at the scene of the assignment.
11-58 Radio traffic is being monitored. Phone all non-routine messages.
11-59 Give intensive attention to high hazard/business areas.
11-60 Attack in a high hazard area.
11-65 Signal light is out.
11-66 Defective traffic light.
11-78 Aircraft accident.
11-79 Accident - ambulance has been sent.

11-80 Accident - major injuries.
11-81 Accident - minor injuries.
11-82 Accident - no injuries.
11-83 Accident - no details.
11-84 Direct traffic.
11-85 Tow truck required.
11-94 Pedestrian stop.

Subject: Alpha Bravo Charlie Delta: phonetic alphabets (revised)
From: Brian.Kelk@cl.cam.ac.uk
Date: 25 Apr 1994 18:30:37 GMT
Message-ID: <2ph28d$2k9@lyra.csx.cam.ac.uk>

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian and Chinese.

This posting supersedes the one of 28th February.

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
25 April 1994

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.

UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by New York Police Department:

Adam Boy Charlie David Eddie Frank George Henry Ida John
King Larry Mary Nancy O.. Peter Queen Robert Sam Thomas
Union Victor William X-ray Yankee Zebra

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

A good meteorologist should be familiar

with the following ideas and concepts:

Atmosphere:

the blanket of air surrounding the earth

Coalescence:

process in which little water droplets come together to form bigger

droplets that fall as rain

Cold Front:

the leading edge of a cold air mass that advances into a warmer air

mass

Condensation Nuclei:

microscopic dust and sea salt particles around which water droplets

condense to form a cloud

Dewpoint:

the temperature to which air must be cooled in order to meet its

saturation point

El Nino:

the cyclical warmings of Pacific Ocean temperatures that results in

significant changes in weather patterns over a period of time

Exosphere:

The outermost layer of the earth's atmosphere, extending from about

250 miles above the earth's surface to the undetermined boundaries of

outer space

Front:

a boundary separating two air masses of dissimilar temperatures and

humidity levels

Heat index:

the perceived temperature to the human body based on both air temperature and the amount of moisture present in the air

High Pressure:

a term used by meteorologists to indicate an area of air pressure that is higher than areas around it; usually associated with fair weather

Humidity:

the measured amount of moisture in the air

Hygrometer:

an instrument used to measure relative humidity

Isobar:

lines drawn on a weather map to connect areas of equal pressure

Isotherm:

lines drawn on a weather map to connect areas of equal air temperature

Jet Stream:

strong winds in the higher levels of the troposphere that separate areas of different temperatures

Low Pressure:

a term used by meteorologists to indicate an area of air pressure that is lower than areas around it; usually associated with stormy weather

Mesosphere:

The layer of the earth's atmosphere found between the thermosphere and the stratosphere, extending from about 30 to 50 miles above the earth's surface

Occluded Front:

a front that occurs when a fast moving cold front overtakes a warm front

Relative Humidity:

the amount of moisture present in the air as it compares to the amount of moisture the air can actually hold at a given temperature

Saturation Point:

the point at which the amount of moisture in the air is equal to the amount of moisture the air can hold at a certain temperature

Severe Thunderstorm:

a thunderstorm that contains any of the following weather conditions - hail that is 3/4 of an inch or greater in diameter, winds in excess of 58 m.p.h. or tornadoes

Severe Weather Warning:

a warning issued by the National Weather Service to counties where tornadoes or severe thunderstorms have actually been observed by the public or detected on radar

Severe Weather Watch:

a forecast issued by the National Severe Storm Forecast Center in Kansas City, Missouri, outlining an area in which atmospheric conditions are right for tornadoes or severe thunderstorms to occur

Stationary Front:

a boundary that separates two different air masses exhibiting little or no movement

Stratosphere:

The layer of the earth's atmosphere found between the mesosphere and the troposphere, extending from about 12 to 30 miles above the earth's surface

Thermosphere:

The layer of the earth's atmosphere found between the exosphere and the mesosphere, extending from about 50 to 250 miles above the earth's surface

Tropopause:

A boundary that separates the troposphere from the stratosphere

Troposphere:

The layer of the earth's atmosphere in which most weather takes place, extending upwards about 6-12 miles above the earth's surface

Warm front:

the leading edge of a warm air mass that rises over a colder air mass

Water cycle:

the ongoing process in which water on land and sea evaporates, forms water vapor, condenses and returns to earth in the form of precipitation

Wind chill factor:

the perceived temperature to the human body based on both air temperature and wind

C-Message Weighting Messaging System (408)-377-7441
==========

EMS JARGON (Reproduced from Baseline News, July 1993)

We got a list of emergency medical system verbiage and discussed their meanings with an individual who works for Regional Ambulance and an emergency medical technician (EMT) credentialed CHP officer. Many of you already know this information but to those who do not, read on.

A.O.#: Ambulance Order number (or "Code 11" in Santa Clara County).
Abrasion: an external injury where a rough surface injures the skin in a manner like sandpaper would.
Airway: a tube placed into the patient's throat that keeps the breathing passage open and/or prevents oxygen or rescue breathing air from inflating the stomach. Air/oxygen goes only into the lungs and the esophagus is blocked. This is usually used on unconscious patients because conscious ones vomit when you put something in their throat.
Apnea: the absence of breathing.
Ambulatory: patient able to walk - able to ambulate.
Amputation: removal of a patient's extremity.
Avulsion: a tissue partly or completely torn off by a mechanical injury such as an avulsed ear lobe.
Bradycardia: heart rate is slower than normal.
C-Spine: "cervical spine"- the top seven vertebrae in the neck area. Injuries in this area are life-threatening because they could sever the spinal cord. A general goal is to keep the neck in a fixed position if injuries are suspected. In response to the command, "don't move your neck" the patient invariably nods.
Chief Complaint: primary problem that resulted in the patient requesting treatment.
Contusion: (con-too-zhun) a bruise.
CPR: cardio-pulmonary resuscitation. The patient is no longer alive and chest compressions as well as rescue breathing are being used in an attempt to revive the patient.
Cyanotic: (pronounced sigh-an-ot-ick) means the patient's skin is unusually blue; caused by lack of oxygen.
Defibrillator: EMT-Defibrillator: (or EMT-D) a microprocessor-controlled defibrillator that senses the patient's heart rhythm. In some situations, the heart beats in a non-productive way so that insignificant or no blood flow is generated. This is called "fibrillation." The defibrillator shocks the heart muscle, stopping it momentarily, so that a normal heartbeat will resume. Paramedics:

paramedics have more skills and use a different defibrillator that incorporates more features or treatment options.
Direct Pressure: when an artery is bleeding EMS providers press against the wound or an "upstream" artery to reduce blood loss.
ETOH: intoxicated or under the influence of alcohol.
Full Arrest: The patient's heart is not beating.
Gurney: the wheeled stretcher used to move the patient.
I.V.: an intra-veinous solution; common types are "D5W" (5% dextrose in water), lactated ringers (usually used to build volume because of a patient's blood loss), saline solution (for infusion of medications); see T.K.O.
Jaundice: means the patient's skin and/or eyes are unusually yellow.
Ked Sled: a scoop stretcher that splits into two halves. It is slipped under a patient and snapped together in order to "scoop" them up. Also called a scoop stretcher.
Labored Respirations: patient must exert a great deal of effort to breathe; S.O.B.
L.O.C.: loss-of-consciousness or (more frequently) level-of-consciousness.
Load and go: the patient's injuries require hospital-level care to improve his/her condition. The ambulance personnel's primary goal is to get to the hospital with the patient immediately.
Lumbar: relating to the lower back.
MAST Helicopter: Military Assistance to Safety and Transportation - military ambulance helicopter (UH-1) from Fort Ord.
MAST trousers: Military Anti-Shock Trousers are inflatable trousers that force blood from the legs into the upper body. This is used to get blood to the vital organs in cases where the patient has lost significant amounts of blood.
Non-ambulatory: patient cannot walk.
Oriented times _____ (1,2,3,or 4): patient is aware of (1) what they were/are doing, (2) what time and day it is, (3) their own identity, and (4) their location. Oriented times four means the patient knows all four. The number is the sum of correct answers. For example, a patient knows, "My name is Joe Smith and I remember that I was riding my bicycle." The patient does not know where they are or what time or day it is and is therefore oriented times two.
Oxygen via Cannula: oxygen is administered through a two-prong nasal cannula in situations where low flows are required and the patient breathes on their own.
Oxygen via Mask: oxygen is administered through a mask in situations where high flows are required but the patient breathes on their own.
Oxygen via Positive Pressure: the patient has oxygen administered under pressure through a mask or airway in situations where the patient is in respiratory distress or not breathing on their own.
P.E.R.L.: pupils are equal in size and react to light.
Posturing: response to pain where the patient's arms, legs, hands, and/or feet move inappropriately in response to certain stimulus. Is an indicator of certain types of injuries.
Respiratory distress: difficulty breathing.
Responsive to painful stimulus: a patient with a lower-than-normal level

of consciousness can be evaluated in part by checking to see if there is a response to pain. A common way to do this is to rub the patient's sternum with the sharp point of the EMS-provider's knuckles. This should cause a grimace, moan, or some similar response.
S.O.B.: shortness of breath; short of breath
Scoop: a stretcher that splits into two halves. It is slipped under a patient and snapped together in order to "scoop" them up. Also called a Ked Sled.
Seizure: or seizure activity usually refers to uncontrolled muscle activity associated with a diminished level-of-consciousness. Two common causes of seizures are epilepsy and (in young children) febrile seizures are caused by a high-grade fever.
Splint: a rigid material used to immobilize broken bones in order to prevent further tissue damage or injury.
Stokes: a basket-like stretcher used in rescue situations where the non-ambulatory patient must be transported over rough terrain or up/down a cliff.
Suction: a device used to remove foreign matter such as vomit or blood from the patient's mouth in order to prevent it from blocking breathing.
Tachycardia: (pronounced tack-ee-car-dee-ya) heart rate is faster than normal.
Thoracic/Thorax: relating to the middle back
T.K.O.: means "to keep open"; a routine, precautionary I.V. started in case physicians decide a drug must be administered immediately.
Traction Splint: a splint that pulls on the end of a broken leg. This is most often used for a broken leg above the knee and results in greatly-reduced pain for the patient.
Traumatic full arrest: a full arrest as the result of an impact, fall, or mechanical injury.
Witnessed arrest: someone saw the patient "go down" and there is some idea of how long the patient was not breathing.
Work-up: stabilizing the patient for transport using drugs or other measures or treatment.

WARNING: This is a general overview of terms and should NEVER be considered as medical advice or the basis for any type of treatment. Treatment for injuries is based on extensive training and formal medical protocols. The above is intended only as a reference to help radio listeners understand what EMS providers are doing.

Trained persons should perform first aid only at their level of training. The American Red Cross offers an excellent variety of classes to teach you multi-media to advanced first aid and cardio-pulmonary resuscitation (CPR). Local Community colleges offer emergency medical technician courses. Take them if you have more than a passing interest: if you would like to help rather than drive-by an accident scene.
